Wrong buffalo breath! I'm the 2nd term Pres of an HOA and we do select which rules to enforce and when. It's written into the charter and Design Standards that since every situation is different, lack of enforcement of a rule in one situation doesn't mean we can't enforce it in other situations.

You signed a contract. If you didn't read the CC&Rs before you bought the property, that's your bad. Be a man and live up to the obligations you signed up to. Other people probably moved into the neighborhood specifically because there were CC&Rs - don't violate their rights because you're some sorta "I'm gonna fight it..." macho man.

If you go to court, guess where the HOA's legal costs are paid from? Your dues!!! You lose either way dufus!

I expect that it depends on the particular HOA agreement, and even the
state in which you live. The few agreements I have read do not have the
wiggle clauses that you mention - although I can see some slimey association
putting them in so that they can do as they wish.

I wouldn't live in one of your god-forsaken nazi neighborhoods. There are
plenty of places to live where I can do pretty much as I please with my
property, as long as I do not make it unsafe for other people.

You're more than welcome to stay in your white trash neighborhood where cars sit up on blocks in the front yard, old furniture sits in the yard, weeds have taken over the entire lawn, gutters falling down, house needs painting, kids need spanking, etc., etc., etc.

Well then, buffalo breath's solution is obvious: eliminate HOA prexys
til he gets one who likes antennas.
Cheers

BTW, that isn't *necessarily true*. I know of at least one case where the court ruled that other homeowners would have to demo that their property values were hurt before a CC&R could be enforced based on previous decisions on racial CC&Rs. They couldn't so the CBr got to keep his antenna. End of story? Nope! As a HOA member he then sued the HOA prez who'd taken him to court in the first place and that *individual* had to repay the HOAs legal expenses for bringing a frivilous lawsuit. He had to sell his house to do so. Naturally YMMV.
Enjoy

Actually, that is a good solution - just wait till a board with more
favorable views takes office.  Or...

RUN FOR OFFICE YOURSELF!

Agreed 100%

> You're more than welcome to stay in your white trash neighborhood where cars

Yeah, that's what it's like, uh huh!

Now, why don't you just close the gates on your
subdivision and stay there.

I looking to get a HF rig to listen to for now, mainly because I will be getting some money back from IRS so I figured I would get one while I have the money. Hope it will also help motivate me into passing the code test faster. They are both in the price range $600 or less and look like good starter radios for new HF users. I would also like to get into digital modes too, I really want to get to SSTV. Some RTTY or PSK.

If anyone uses one of these radios could please give some information on some things you like and dislike about these radios would be very helpful. I have a month or two to wait for my check to come back so I want to do some research on the radios. Ads don't help as much as user input. Or if you have some other radio choices in the price range you use and like let me know.

Please.

William (KC2GSO)

Thank you.

I'm getting an Icom IC-R7100 scanner/receiver. I need an interface and software. I know it can use the CT-17 cable but I would take another interface, if better or cheaper. What software & interfaces are there? What is the best?

I will buy new or used. If you're selling a copied CD of some software, if it's not legit, I don't want to know (about it).

I would like to pay with Paypal.

Here is some software & hardware (any feedback?):

http://n9zle.tripod.com/

Thanks for any help! -David

Hi all,

There is small problem with my dr112e alinco VHF base.

I am able to transmit,
but unable to receive any stations.

can anybody please advice on this.

Thanks in advance
73's

Heh, heh. Boy would you be surprised. The people around here take pride in their houses and property. They just don't need a group of control freaks dictating to them how to do so.

The kids may need spanking, but that is pretty much true anywhere in the US these days. If you punish the kids - you get accused of child abuse.

Nah. He would want a HOA for a bunch of bums living under a bridge.
Trailer parks would be upscale neighborhoods.

Hi!

I am still searching for one or two 3CX800A7 tubes - preferably cheap and surplus to requirements. Must be in good working order please.

Please reply to: g3uof@hotmail.com

Thanks,

Mike

My father (G4IRM) has the FT840 and its a pretty neat radio. He gets very good audio reports, though I have to say that when I use it for CW I find its not so good as my FT920 for filtering. The one annoying thing (for me) about the 840 is a clicking noise as the VFO dial is turned - I guess you get used to it if you use it a lot..

Atually, the area I live in is very nice, but really just a housing tract. There is no home owners association, but there are CC&R's. I guess the only way to enforce them is through individuals taking other individuals to court.

I am still not sure what I am going to do about my antenna situation. I have talked to a few neighbors that don't seem to mind the idea of an antenna, but everything is still up in the air. Meanwhile, my IC746 sits by on my desk waiting for use.

James

Was wondering if anyone had a service manual for the 4 watt UHF Motorola HT-90 portable. Specifically, I need the alignment instructions, schematic and circuit-board layout. The model no. is H34HMU3124AN. Thank and would appreciate any replies of a link to a website with this info also.

I just made the same decision. I went with the IC-718 for the following reasons:

1. Overall, better reviews on eham.net.
2. Fewer buttons to have to learn.
3. Promotions/Coupons. I paid $519,delivered, and have a mail-in offer for a free DSP unit.

If you want FM, you will have to go with the Yaesu w/ an optional board. Since I don't intend to use FM on HF, that did not matter to me.

Simple, reputation for reliability, cheaper, and a free DSP module. For what I wanted, it wasn't too hard a decision, although (as always)YMMV.

Seems like sometime in the foggy past, one could buy IRC's at a discounted price from "somewhere". Folks who received large numbers of the coupons would trade them for cash instead of postage, through brokers or some other third party. Details, like my memory, are foggy (I already said that, didn't I?) Don't know if this is/was legal, gray market, black market, or what - but I've looked around the web for info and can't find any info indicating that this is still done. Anybody know? Have "green stamps" replaced IRC's in the QSL arena? Somebody bring me up to date. If these second-hand IRC's are still out there, I'd sure rather pay a discounted price than the current $1.75 U.S. price.

I want a printed circuit card that plugs into my P.C. and operates as a complete ham band transciver. There should be just one chip on this pc card.
The output can be quite low, say about 1 mw but this must be cw, ssb, sstv, psk, fsk and of course am (Ancient Modulation).
I would wish to have all functions desktop controllable. No more knobs to twiddle. It should of course sell for no more that $59.99 U.S. Where do I order?

I have a Standard C5718DA Dual Band transciever with CMP843A microphone. The radio was manufactured by Marantz for Standard. The radio is controlled by the microphone which communicates with the main body of the radio with serial digital codes. These codes have not been published in the owner's manual.

I have tried to obtain the codes from Standard service when they were in business with no luck. I have tried the Yaesu - Vertex service after they bought out Standard. The Marantz web page is for audio equipment now.

Can anyone provide me with the codes? Or make suggestions on how to contact the manufacturer in Japan? Or any other source for this info?

Thanks for the info. Seems like a good deal. Where did you get yours from?
It is sometimes hard to decide since it is the one you will be with, so make
it a good one, right. But the big problem for me now is another radio is on
the list, maybe the Alinco DX-70TD for moble use as well. 100 watt HF+6m
moble/base radio $600. That one sounds nice since I can use the 6 meters
until I get the code passed and upgrade. FM/SSB/CW unit.

what to get...what to get.... hmmmm :)

What kind (i.e. brand, type) of 12.8 volt battery would you recommend for portable use (Emergency or field day). I have a car battery that is in pretty good shape, but have heard I would need a deep cycle battery.

Where can I purchase these? Thanks in advance for your help.

There are several battery packs out there with a ~17Ah gel cell inside, which have jump start cables attached. These are great for jump starting cars (AAA and garages use them in road service vehicles). They also have a lighter plug, and sometimes other things (light, tire inflator, inverter).

While the lighter plug may not allow more than 10A loads, if your mobile takes more than that you can do some direct wiring to the battery as you would do with a car.

My mobile takes 13A full load transmit, and less than 0.5A when listening. Unless you are talking most of the time at max power, that gives you a long useful time between chargings.

You can also rig something with a bare gel cell battery and your own charger. Gel cells are a bit safer to haul around than liquid acid ones.
Happy trails,
Gary (net.yogi.bear)

When the choice is between No Ham activity due to Ant,RFI restrictions or something like I Link then it's a no brainer.Sure it's like extending your Mic / control cable thousands of miles to a distant repeater but it does allow hams to communicate,rag chew etc with their counterparts across the nation and world with 2m FM quality to boot !

The problem of hams moving into houses / apts with restrictions is an exponentially escalating urban problem in many countries.There are countless idle 2m / 70 cm / 10m / 6 m repeaters all over the world that make them a natural for I Link.Those repeaters (being located in less restrictive areas) do not pose the same problem for communities as the urban ham station.
One could have a PC in every room in every house but that is practically impossible with an HF rig and antenna.

Rather than lose these hams I Link provides a means to retain their interest.Yes it does away with all the multitude of problems and expense of equipment and antenna's and NO it's not pure radio.It's just another mode / system for communication.

If Ham Radio is the top priority in your life and you have acres of land and the resources for top of the line equipment and monster antenna's then go for it.If not I Link provides an alternative for those not so lucky or inclined to set up such stations.

In addition I Link does not have the restrictive "closed shop " aura of many of the IRLP nodes.

Whether it flourishes or not depends like most things in our Democratic society.The users vote of choice will determine it's future.

Keith,

I believe the answer can be found in the Hints and Kinks section of the November 1993 QST magazine. There is a writeup entitled "Curing multimode communications processor distortion with the Kenwood TS-850S".

Amateur Radio Newsline Report 1278 – February 8, 2002

Amateur Radio Newsline report number 1278 with a release date of Friday, February 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another Anthrax scare halts mail to the FCC in D.C. and ham radio growth may not be as good as it seemed. These stories are first on Amateur Radio Newsline report number 1278 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: FCC STOPS D.C.MAIL DELIVERY DUE TO NEW ANTHRAX SCARE

The Federal Communications Commission says that it will not accept paper mail in the Washington D.C. area until further notice. This, after a trace amount of the Anthrax virus was found during a routine test. Amateur Radio Newsline’s Paul Courson, WA3VJB, is in the nations capitol with the details
--

The scant amount of anthrax contamination found at a Federal Communications Commission mail facility in Maryland last week was consistent with cross-contamination of mail. At least that’s what the result of tests conducted by the Center for Disease Control and Prevention showed.

The FCC's mail processing facility in Capitol Heights Maryland, outside Washington, was tested about a week and a half ago as a routine precaution. One sample taken tested positive for Anthrax. The C-D-C blames the problem on cross contamination of mail. This means one or more pieces of mail from another facility may have inadvertently brought the contaminant to the Maryland site.

The agency is arranging for the facility to be decontaminated and re-tested. Mail deliveries, which have been halted, will not resume until the area is found to be anthrax-free. For ham radio, this only affects such things as requesting or commenting on rules change requests.

The FCC said it would also test the mail room at its Gettysburg, Pennsylvania, facility to make sure that it is Anthrax free. Gettysburg is where most Amateur Radio related mail including license applications and renewals are sent and is not affected by this latest paper mail suspension order. At least not so far.

For the Amateur Radio Newsline, I’m Paul Courson WA3VJB in Washington.

--

Late last year five people, including two postal workers, died of the inhalation form of anthrax and more than a dozen were infected in a series of attacks that followed the terrorist raids on the World Trade Center and the Pentagon. So far no arrests have been made in that case. (Published news reports)

**

SPACE AND SCIENCE: ON-ORBIT COMPUTER FAILURE CAUSES ISS OUTAGE

Ham radio was there but it was not needed. That’s the basic wrap up after a computer failure aboard the International Space Station sent the 17-story complex into a slow drift for a few hours on Monday February 4th.

The temporary outage also disrupted voice communications with the ground using normal channels. It also brought science research to a halt. But NASA officials said that neither the station nor its crew ever were in any danger.

The station drift was halted about 17:00 GMT. That enabled the crew to begin the job of re-orienting the stations solar panel arrays. Once normal power levels were restored, systems and experiments that had been shut down were brought back on line.

The computer shutdown was eventually traced to a defective hard drive. James Hartsfield, a spokesman for NASA's Johnson Space Center in Houston said that the three ham crew was never in any danger as a result of the failure. He termed it nothing more than an interruption to their normal work day.

Launched last December 5th on board the shuttle Endevour, Russian cosmonaut Yuri Onufrienko RK3DUO and U.S. astronauts Daniel Bursch KD5PNU and Carl Walz KC5TIE are the forth crew to inhabit the I-S-S. In addition to all of the high tech communications gear the crew also has ARISS - the ham radio station on board the International Space Station as backup voice and data communications. It was available, albeit not needed this time around. (ARNewsline(tm) from NASA

Release)

**

HAM RADIO GROWTH: CENSUS REDUX

Some dark news following the good news on ham radio growth patterns. The numbers may not be as good as we reported two weeks ago. So says Fred Maia, W5YI, who follows growth trends in ham radio. And Fred says that the numbers we presented are overly optimistic:

--
Fred Maia:

“The FCC database is a database of all amateurs who have been licensed for twelve years. Thats ten years for the license term and an additional two. The reason it stays in the database for the additional two is so that it can be renewed diring the grace period. Thefefore, the licenses in the database are two years more thanthe ten year term or twenty percent inflated.”

--

In our story we used statistics from several sources including QRZ, W5YI and others. But Fred says that there are more recent numbers that show things may not be as good as they may seem on the surface.

According to Fred, as of January 15th 2002 there are actually only 98,030 holders of the Extra class license, 86,425 legacy Advanced, 138,546 Generals, 318,603 Technicians and legacy Tech plus and only 39,972 Novice class. The total is 681,576. That is considerably lower than the 720,194 in the latest QRZ census and 10,424 lower than the adjusted 692,000 we believed to be accurate.

The bottom line. Once you take away the expired licenses that are in their grace renewal period, the club and military recreation stations and the like the numbers tell a different story. One thats not nearly as rosy as we and others thought only two weeks ago. (ARNewsline(tm))

**

WINTER OLYMPICS 2002: COMMEMORATIVE STATION ON THE AIR

The Winter Olympics are in Salt Lake City Utah and ham radio is helping to celebrate the games with a special events station. Linda Reader, N7HVF, has more:

--
“Its going to start on Thursday at 5 PM Mountain Standard Time and it will go until the 25th of February. It will be available on all bands, so people will only need to listen around. The station call will be W7U and the trustee is W7EO.”
--

Again, listen for W7U celebrating the 2002 Winter Olympics through February, 25th. (N7HVF)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB2FKZ repeater serving West Babylon New York.

(5 sec pause here)

**

SPECTRUM: WHITE HOUSE PROPOSES PAYOUT TO CHANGE FREQUENCIES

The Bush administration says that it will propose setting up a $715 million fund to reimburse federal agencies that relocate their RF operations. This, for moving away from spectrum that has already been auctioned to commercial service providers.

In the past, federal agencies have had to negotiate with the winning bidders to cover relocation costs. In fact, following the September 11th terror attacks the Pentagon said it would not move off bands that it uses for military training and other purposes without sufficient funds to pay for relocating.

This created a stalemate over making available airwaves hotly desired by mobile telephone companies like Verizon Wireless. Now, in his budget just sent to congress, President Bush proposes setting up a fund to streamline the reimbursement process. Auction receipts to cover agency's relocation costs would be paid into the fund and federal agencies would be reimbursed for their relocation costs out of the proceeds.

What does this mean for Amateur Radio you ask? Simply that more spectrum that hams share with the government and military could be up for grabs sooner than most thought it might happen. But even with the subsidy some analysts of military communications say that it still could take several years before you see any spectrum moves take place. (Published reports)

**

FCC: OLYMPICS CAN USE 2300 MHZ HAM BAND FOR OLYMPICS

Broadcasters at the 2002 Winter Olympics have been granted a Special Temporary Authority from the FCC to use a ham band for their coverage of the Salt Lake City games. The S-T-A was made available at the request of the Salt Lake Organizing Committee R-F coordination group to use 2300 to 2305 and 2390 through 2450 MHz for remote pick-ups at various Olympic venues.

Unlike Australia two years ago, this FCC action does not take hams off the air nor does it forbid amateur use of the band during the period of the S-T-A.

Instead it took action reminiscent of one that helped to establish ham radio's "National Frequency Coordination Council." The agency told all spectrum users that it had designated the Salt Lake Organizing Committee is the single point of contact or "SPOC" in regard to all Olympics radio frequency requirements. This delegated authority continues with the committee through March 31st. (FCC, Broadcasting & Cable, ARNewsline(tm))

**

PUBLIC SERVICE: HAM RADIO AT THE SUPERBOWL

Last week's Super Bowl played in New Orleans between the St. Louis Rams and the New England Patriots was a squeaker to the very last play. With the game tied at 17 to 17, in the 4th quarter, New England opted for a Field Goal that brought them victory in the very last seconds of normal play. It was a game seen by millions, but what t-v viewers did not see was the work of a group of New Orleans area hams who were a part of the behind the scenes communications effort for the game. Amateur Radio Newsline's Don Wilbanks, KC5MFA, lives in the Big Easy and has this look at the role that ham radio played:

--

While thousands cheered on the Rams and Patriots inside the Superdome and millions watched on television around the world, a handful of New Orleans hams were busy outside in the streets of the Crescent City.

--

"K5OEP go ahead." "Checking in, nothing to report. Everything's normal. WA5RT 2104 aaah, Poydras and South Claiborne." "K5OEP roger, 2218. Other station?"

--

K5OEP is the call sign of Southeast Louisiana ARES. New Orleans area hams assisted the American Red Cross as they provided tracking for those sent to area shelters or hospitals should the unthinkable occur. Several Emergency Response Vehicles were in use feeding the workers and standing by in reserve should they be needed in an emergency. The ERV's had a staff of 2 plus a ham with voice capability and APRS tracking. There were "Action Teams" standing by with a ham and a dual band HT. Hams also manned a command post trailer at City Hall as well as the Red Cross operations center on Canal Street and another Red Cross office in suburban Metairie. The communications operations began on Friday, February 1st and continued Saturday as well as Super Bowl Sunday. Tom Miller, AC5TM, ARRL Louisiana Section Emergency Coordinator and Keith Barnes, W5KB of the Red Cross were instrumental in putting the effort together. The local CBS affiliate, WWL-TV channel 4 did a lengthy report on the Red Cross, of which about a minute was focused on the hams. Several hams were featured on camera in the piece. Thankfully, this is representative of most of the radio traffic.

--

"K5OEP this is W5GAD." "W5GAD, K5OEP go ahead." "Just checking in Josh and, um, if it's possible could we get a cup of coffee next time the truck comes down this direction?" "This is KC5BCR, we're gonna take care of that coffee request."

--

Only three things occurred that could be considered out of the ordinary... a semi-nude escapee jumped off a bridge to evade capture, a Rolodex in the Superdome caught fire from being too close to a light and the New England Patriots finally won the big game. And isn't it fitting that an underdog team called the Patriots would be victorious on this first Superbowl since September 11th. Next on the agenda for the city... Mardi Gras on Tuesday, February 12th. From Party Central in New Orleans, Louisiana, I'm Don Wilbanks, KC5MFA.

--

Before we leave this one we have some interesting statistics. According to the Broadcasting and Cable newsletter, Super Bowl 36 delivered the Fox Television Network a 42.5 rating and 61 share in what are called the metered Nielson overnight market ratings. This means that about 67 percent of United States households with television sets had them tuned to the game at some point during the telecast. (ARNewsline(tm) - Produced by KC5MFA with sound provided by KD5BLV)

**

RESCUE RADIO: HAMS ASSIST FOLLOWING QUAKE IN TURKEY

Amateur Radio operators in Turkey were among the first to respond in the wake of a earthquake that rocked the province of Afyon on Sunday February 3rd. More than forty were killed and at least 170 were injured injuries were reported in the aftermath of the 6 point zero tembler. Structures were destroyed and lines of communications were cut. Enter Amateur Radio.

According to an ARRL bulletin members of Turkey’s Civil Defense Search and Rescue Team responded following the quake. The bulletin quotes Aziz Sasa, TA1E, the president of the Turkish national Amateur Radio society as saying that S-A-R communicated with it’s headquarters in Ankara and within the affected area. This was because ham radio was the only long and medium-range communication resource available until normal lines of communications were restored. Most ham radio communications was on VHF using a system of linked repeaters. (ARRL)

**

RESCUE RADIO: AMATEUR RADIO OPERATORS HELP SAILBOAT IN DISTRESS

The ARRL Letter says that Amateur Radio played a role in the rescue of two people aboard the sailing vessel Antigone. This, after it ran aground off Honduras on Thursday, January 24th.

Ed Petzolt, K1LNC, of Hobe Sound, Florida, told the Letter that, despite some apparently deliberate interference, members of the Intercontinental Net on 14.300 MHz helped relay communications from the vessel, which was equipped with an High Frequency marine radio.

David Walz, AG4LI/HR6, in Honduras was in contact with the boat and passed traffic from the stranded mariners to the Net. Petzolt said he was able to patch the US Coast Guard in Miami through to Walz, so the Coast Guard could obtain additional information and coordinate with Honduran authorities.

Petzolt said the two passengers aboard the 40-foot vessel were safe, and the boat was on the beach. The FCC is reportedly investigating the interference issue. (ARRL)

**

HAM RADIO SCHOLARSHIPS: QUARTER CENTURY WIRELESS ASSOCIATION

The Quarter Century Wireless Association has announced its funding several scholarship for 2002. There are eleven QCWA scholarships valued at $1000 each and five valued at $1500 each to be awarded later this year. Hams interested in applying for the QCWA Scholarships should contact the Foundation for Amateur Radio. The Foundation administers the scholarships sponsored by the QCWA. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (QCWA)

**

HAMFESTS: LIMARC N.Y. FEBRUARY 24TH

LIMARC -- New York’s Long Island Mobile Amateur Radio Club will hold its annual indoor Ham Radio flea-market On Sunday, February 24th. Location is the Levittown Hall beginning at 9 a-m. More information is on the web www.limarc.org. (N2DO)

**

THE HANDI-HAMS: 2002 CALIFORNIA CAMP FULL

The Minnesota based Handi Hams say that their California Radio camp is now full. This year, campers will be treated to presentations by Jeff Reinhardt, AA6JR, for Alinco, and everybodys favorite ham radio instructor Gordon West, WB6NOA. The dates for the 2002 Handi Ham California Camp are March 3rd to the 10th at Camp Joan Mier in Malibu. More is in cyberspace at www.mtn.org/handiham/workshop.html. (HandiHams)

**

BREAK 2

(5 sec pause here)

**

EMERGING TECHNOLOGY: SUPER NET HAS ARRIVED

Australia’s new super-net has had its first successful demonstration, proving it can carry an enormous amount of data between two locations. In fact, its not just fast. It is virtual reality come to life. Q-News Graham Kemp, VK4BB, has a look at what super net can do:

--

In its 'maiden voyage,' the new high speed networking technology --10 Gigabit per second Ethernet -- ran a revolutionary combination of technology that allowed two people, in different locations, to work together on a virtual 3D object, each being able to feel the object and see what the other person was doing to it. At the same time they could use a studio quality video link to communicate.

These two functions were tested in a situation where they had to compete against a volume of network traffic equivalent to Sydney's telephone system at peak levels.

The demonstration involved networking a virtual environment from two separate sites, CSIRO's Virtual Environments laboratory at the Australian National University and CSIRO's corporate headquarters several kilometres away.

--

According to Graham, networks such as this will allow users in several locations to feel computer generated objects such as body organs. Among other things, this tactile ability means a surgeon could train many students in different cities at the same time. (Q-News)

**

EMERGING TECHNOLOGY: CENTRAL STATES VHF SOCIETY CALL FOR PAPERS

The Central States VHF Society will be holding it's 36th Annual Conference later this year. The dates are July 26th to the 28th at the Sheraton Four Points Hotel in Milwaukee, Wisconsin.

And now comes an invitation to those interested in making presentations at this event. You are invited to submit an outline to Marc Holdwick, N8KWX, who is this years Technical Program Cairman.

Holdwick says that any topic related to weak-signal VHF operation is welcome and can be submitted in either paper or electronic format. But says N8KWX, those submitting will be required to have the finished work in his hands by May 5th to be included in the printed Proceedings.

If you are interested in taking part, you can contact Mark Holdwick by e-mail n8kwx@csvhfs.org. His snail-mail address is PO Box 6051, Buffalo Grove, Illinois, 60089. More information is on the web at www.csvhfs.org/CSVHF02.HTML (CSVHFS)

**

EMERGING TECHNOLOGY: RF CONTROL OF BIOMOLICULES

Scientists from the Massachusetts Institute of Technology Media Lab report that they can now control biomolecules with radio frequency energy. Bruce Tennant, K6PZW, reports:

--

Biomolecules such as proteins and nucleic acids are basic building blocks in nature. They carry out a wide variety of nano-scale functions, many of which have proven useful in drug discovery, drug delivery, biocatalysis, and bio-materials. But to optimally exploit these capabilities, researchers must be able to rapidly control their activity.

Now in the paper, titled "Remote Electronic Control of D-N-A Hybridization Through Inductive Coupling to an Attached Metal Nanocrystal Antenna, researchers describe a unique method to do this. One that employs the phenomenon of inductive coupling to metallic nanoparticles by radio frequency energy to specifically and remotely control DNA molecules. And they say, it works.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

Their paper was published in the January 10th issue of the journal Nature. More information is available at www.engeneos.com. (Technology Today)

**

INTERNATIONAL - UK: NEW RSGB PRESIDENT

The Radio Society of Great Britain has a new President. As of January 1st, Bob Whelan, G3PJT, has taken up the leadership position at the United Kingdom's national ham radio society.

Whelan says that he is looking forward to the challenges ahead in raising the awareness of the value of Amateur Radio as a way of interesting the next generation of radio engineers and scientists. He will serve a two year term leading the RSGB. (GB2RS)

**

INTERNATIONAL – SOUTH AFRICA: NEW SHORTWAVE GUIDE

Media Network reports that a new comprehensive country-by-country guide to domestic and external shortwave broadcasts from sub-Saharan Africa, including opposition broadcasts to the African continent, has been added to the British DX Club web site. The guide, compiled by BDXC editor Tony Rogers and fully updated for the winter schedule period, is available in by-country and by-frequency versions. It can be found on the Articles index page of the web site at www.bdxc.org.uk. (Media Network)

**

CONTESTS: GREAT LAKES QSO PARTY

The Great Lakes QSO Party will begin on Saturday, March 9th at 17:00 UTC and run through Sunday March 10th at 04:00 UTC. The object of this contest is to work as many Great Lakes States as well as VE3 and VE4 Canadian provinces as possible during the allotted time. C-W and SSB are the only modes permitted and operation is on all bands except for WARC. Logs must be submitted by mail before April 25th to the address listed at the contest website. Look for more information at www.geocities.com/mdxa1/qsoparty.html. (E-mail)

**

DX

In DX, the Trindade 2002 PW0T team reports that several major sponsors have come forward providing vital support for the upcoming DXpedition. ICOM America will be providing a number of ICOM IC-756 PRO II transceivers. ICOM will also be sending along an IC-910H for satellite operation. Possibly the first-ever satellite activity from Trindade.

But that's not all. Electril, a Brazilian manufacturer, has begun shipping antennas to the team staging area and Bob Heil, K9EID, of Heil Sound has personally made arrangements to insure that the DX'ers will have new reliable headsets.   Meantime, JA1FGI and JA1WSK have covered the cost of purchasing and shipping a complete RTTY, PSK-31 and SSTV equipment package. Lastly, its reported that the Six Meter Amateur Radio Klub and the Chiltern DX Club are the first organizations to provide the D-Xpedition with financial support.

The operators will leave Rio de Janero on February 15th for Trindade. More information is at the DXpedition website located in cyberspace at www.trindade2002.com (PW0T release)

**

THAT FINAL ITEM: THE SWOOPER

And finally this week, a loud buzzing noise being heard in the international shortwave band is apparently a new RADAR system used to measure wave height. According to Mark Fine, the system is located at Barnegat Bay New Jersey and transmits a one megahertz wide signal in varying five megahertz wide segments. Take a listen:

---
swooper audio here
--

Fine tells Amateur Radio Newsline that he made that recording on 4.795 MHz at 1850 UTC on February 5th. He was listening on a Drake R 8 A receiver set to upper sideband and a 2.3 kHz bandwidth. He says that during the evenings this beast takes over a whole band and is heard as far away as Europe and South America.

Already, some SWL's have nick-named the noise a "swooper" because it sweeps quite fast making a "swoop" noise as it goes by in SSB. Others have called it the Windshield Wiper Network, which they say is very apropos. (DXLD, CGC Communicator with “Swooper” audio provided by Mark Fine).

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Have you used this battery before, and did you have problems with its
capacity?

Just curious...

Haven't used it before. Frankly, it's heavy and toting it around always invites leakage. I ve heard stories about regular car batteries affecting digital readout. I am going to be getting involved in ARES and Satern emergency services. I would imagine I need something to run 12 hours or so at a time and always a possibility a generator would not be available.

Selling my Ten Tec Omni 6 PLUS loaded with all filters ie 2/500hz,2/250hz,1.8 sb narrow, and stock 2.4kc, 705 desk mic, 962 power supply, original manuals, original cartons and packing. The condition is as near new 9.9. This was a factory built 6 Plus and is about 2 years old. It is the best Ive ever owned and used but a family project has arisen and I decided to let it go. I'll throw in the scarce remote tuning dial with it. Price is $2300.00 shipped and insured. I will not sell items separate-thank you. 73s Lew KlNDV

I am going to be getting into Packet soon and I want to get a decent 2m mobile radio to use one both voice and packet in the shack. From what I understand, if a radio has a dataport on it, I don't need a special cord going to the microphone plug. If this is true, this is the type of radio I want. Can anyone recommend a radio for me?

I got it from George at GigaParts (www.gigaparts.com). Icom's $50 coupon expires 02/14, and the free DSP ends 03/31.

The Alinco has quite a following, as well. If you haven't already, check the reviews on all three at eham.net. While you are there, there are some good comparisons of the IC-718 and FT-840 in a thread on the company reviews forum.

It is a tough decision. If I'd had the money, I might have gone with the 706MKIIG or FT-100D and had it all in one package. If I could not have gone ahead with the purchase while the incentives were running on the 718, I might have looked closer at the Alinco, myself.

For me it came down to my primary interest (SSB and CW 75/40/20m), the 718 was the most bang for the least buck. So far, it looks like I made the right decision for me.

Good luck which ever way you go.

First off Chris, you can't operate your business on any amateur radio frequency.

If you just want to be a ham you need to take the test. Contact you local amateur radio club, they can help you.

Chris...

Yes absolutely!

MulitMode is a terrific Mac app by Black Cat Systems! It has more than 12 modes you can monitor (and transmit if you are licensed), including RTTY, Slow scan TV, CW (morse code), WEFAX, PSK31, Packet and much more! I've been using it on my Mac for a couple years now with great success.

If you are interested in Mac software for Amateur Radio/Showtwave listenging, check out the following sites:

* MacHam: hardware and software solutions for the Mac ham:

http://www.macham.com

* MultiMode and other great Mac software for hams:

http://www.blackcatsystems.com

I'm working on several Amateur Radio applications as well. They include contesting software and logging. They'll show up on MacHam once they are ready.

Regards,
Mike Carter - K6MEC

You could try running Linux on your G3. There is a
lot of amateur radio software available for Linux.

http://radio.linux.org.au/ is the first place to look.

While what you suggest is, indeed, action, it is hardly affirmative in nature. You seem to be suggesting that minorities are incapable of learning morse code and should somehow be exempt from knowledge of the rules and regulations by which they much practice the hobby. A better and more affirmative action would be to try harder to offer learning programs in minority neighborhood centers or school disticts, to offer code and rules classes at public libraries accessible to minority populations. The code requirement seems like it will soon bite the dust in spite of people who want to keep it, so perhaps you'll be receiving that part of your wish.

Your desires are admirable, but I don't agree with the steps you suggest. It's a bit like saying that affirmative action in commericial driving should start with minority drivers not having to take parts of the driver license exam/test drive. Action good. Exemption from knowledge bad.

73,
Matt

And, fortunately we've been for the most part successful in keeping it
that way.

Unfortunately in order to do that we'd have to make the form 610's big
enough so that they can be filled out with a can of spray paint.

What are we going to do, have a jive test instead of a morse code
test? Can drums be modified to send cw?

Well, that sounds like a good idea, unfortunately none of the ham
radio stores accept food stamps so what you would in effect doing
would be starting a crime wave in which cars and houses are broken
into and people murdered for their radio equipment.

Is there a list somewhere that shows how to associate independent cities in Virginia with counties (if one is allowed to do that at all) And what about Carson City, NV and the whole state of Alaska which has no counties...just districts..

And what about Washington. DC.. no county there either???

Thank you for your comments(Mike, Ed, and Marc).

I thought I had the right equipment and was not lacking a go between. I'll have to focus more on better antenna solutions although I am fairly limited in choices since I am an apartment dweller. I have been impressed with the capability of MultiMode so far. I haven't taken the technician exam yet so I

can only play with receiving portion but I think it will work well in the
future for me once I am licensed.

I do have a Pentium desktop that I use for business apps but I would like to
start configuring my Macintosh towards hobby work especially since it is a
laptop. Ed - You're not the only person who has tried to get me to switch to
Linux on the Mac. I might just have to experiment a little with that.

-Chris

TROLL.

Having said that, I'll post my reply as well.

The amateur exams have already been "dummied down" enough for ANYONE to
pass. If you want these "under-represented members of society" to get
involved, I'd suggest offering classes in an inner-city community center or
something of the like. Or, buy a book, buy a code tape and do it like the
rest of us. Come on, if you listen to the bands it is obvious that every
Billy Joe Jimbob in Trailer-park USA can now get a license; I am certain
that ANYONE else could pass with some study. This hobby has never been

closed to anyone because of "discrimination"; it has only been closed due to
ignorance and laziness.

BTW, if you are sincere in your intention to bring ham radio to the
under-represented, I'd suggest collecting and distributing previously used
study materials. I'd be happy to donate mine, and I am sure others on the
net would as well. Send an address, and I will send my books/tapes on their
way.

Beyond printing the exam in Ebonics (heavy sarcasm fully intended), I don't
think there is much more that could or should be done.

James

news:<b3q38.1754$KA2.5146@rwcrnsc52.ops.asp.att.net>...

I think the exams need to be dummied back up where they belong. Who cares if a certain group of people isn't interested in getting on the air. Anyone who wants to get a license can, forget trying to get everyone in the US licensed. If the ARRL had their way, licenses would be given out in cereal boxes. Give them time.

Technicians have always been the bums of the hobby, ever since the license was introduced in the 50's. It was a way to get the terminably lazy and stupid into the hobby. I call tech's "radio niggers."

The tech license needs to be eliminated and noone grandfathered.

The entry level license will be the novice as it was in the 80's, then General, Advanced, and finally Extra.

I noticed that you didn't argue with what I said. Regarding the technicians, it's not bigotry, people have a choice as to what license they have and how lazy they are or aren't.

>

hey all, i'm looking to basically build a small am/fm transmitter with a
couple of miles of range. from what i gather this is based much more on the
amplifier you use than the actual transmitter so i wanted to know what
difference the transmitter makes. im also unsure how exactly you include
the amplifier in the circuit and connect the antannea but i have basic
circuit building knowledge and would prefer to build my own. if there are
any low price kits however i would be willing to look, but i want to learn
more about their functioning as well.

thanks a lot

Eric, the first thing you need to figure out is what frequency. Certain freqs
are "license only" areas...in other words, you'd have to apply for a licence,
etc. in order to transmit. If you get your amateur licence, even the no-code
tech licence would let you experiment on many bands, 50 mhz and up. Easy to

build circuits for those frequencies. Ramsey Electronics and MFJ (www.mfjenterprises,com, I believe) both offer kits which can get you on the air. As for homebrew, check out older QST or 73 mags at the next hamfest. Lots of articles, esp. the 80's mags.

Good luck!
A

I need a SPDT antenna swiching array for 450 flat line. My existing arrangement uses individal 450 ohm transmission lines to feed each antenna over a considerable distance. This is a rats nest of wires. There are commercial antenna switchers for unbalanced coaxial line but I am not aware of a balanced switcher for balanced lines. I would build it myself but each SPDT relay (P&B PRD type) costs $50.00 plus 15% tax here in VE3 land. That is $300.00 Can just for the relays. Each ceramic feed thru insulator cost $13.00 plus tax and 14 are required. The cost of components is absurd. I want a commercial source of a five position, balanced transmission line to antenna switching arrangement.

1.2 GHz HTs (both monoband and dual band) used to be easy to find but now there aren't very many around. I may be interested in picking one up but I haven't seen any lately. Can anyone suggest a good source or recommend a good 1.2 GHz HT?

I am looking For Schematic or Manual for a - 70 CM  PD-ATV-50 PAULDON
 or, and old broshures.
 and any info about the bricks, Amps   -M67728   or  M67705M
 Where can they be purcased how much they cost.. I have digital
 pic if you need more info

  Thank you

 Tom KF6RTY  email- mrthoms7@pacbell.net

Get this: I send a package to Colorado via UPS. I label the package
with the printed Label ups.com gives you when you have an account with
them. I drop off the package at an "Authorized UPS Shipping Center"

because it is insured for $3,400 and that is what UPS requires. I get a receipt from the shipping center stating that the item has been properly packed and labeled. OK so far... Four days later a guy in New Jersey at a communications business calls me. "We have your package and we don't know why it came here, but we opened it and read your letter inside. Looks like it is supposed to go to Colorado, what should we do with it?" I tell the guy thanks for calling me and I will call UPS and get back to him. I call 1-800-pickups. The first "support" person hangs up on me. The second says I "should take it up with the shipping center" (all they did was hold it for the truck pickup, the UPS driver in reality should have scanned it upon pickup). I ask to speak to a supervisor. The supervisor is cooperative and I tell her I want the thing overnighted from New Jersey to Colorado since it is "Guaranteed" to be there tomorrow by UPS. She says, "OK, I will call NJ UPS and set that up, they will call you in one hour or less." I thank her VERY much and ask for her name, title, and location. She complies. I am a happy camper. One hour passes, no call, two hours pass, no call. I call UPS back and ask to speak to this individual and... No such individual exists!! By this time it is late so I call and get another person in the morning who tells me to "take it up with the shipper..." I ask to speak to HER Supervisor. Her Supervisor says she will investigate and get back to me.... 7 hours go by. I call her and ask for a status report. Luckily, "she exists." Her answer? "Sir, since the package arrived in NJ and it was signed for; it is considered a completed delivery." I ask, incredulous... "What about my package?" "Sir," she says, "You need to contact the individual in NJ who has your package and ask him to forward it to Colorado for you. Since it was never scanned into our system there will be no charge." UPS at no time took responsibility for this transaction, despite my signed receipt. At no time did they offer a viable solution to a problem they created. At one time I received FALSE information from a UPS employee just to get me off the phone. Hence; I WILL NEVER DEAL WITH UPS AGAIN, and I would urge all persons to carefully consider all other alternatives before trusting anything of value to UPS. Only through the kindness and honesty of an individual in NJ was I able to locate and send my package to its proper destination. Rest assured, when it gets to Colorado, it will not have passed through UPS hands.

I've been using UPS air services for around 10 years now. Everything
I've ever sent has been delivered to the intended recipient. Only one

package I know of was delivered late -- by a day -- and UPS refunded the
shipping charge when I brought it to their attention.

Roy Lewallen, W7EL

Are you using an antenna tuner? If not, can you use coax feed to each
ladder line?

Maybe they should lower their standards so that deserving minorities
could obtain these jobs.

:-)

Bill

Fed-ex is fine if you are a business, have a city address, are in the
yellow pages, and have a sign out front. If you do not qualify, it's
just TS.
I live in a rural area- UPS found out how to find us country folk, a
long time ago. The first delivery FedEx tried, they got lost three
times, and I finally had to get them to sit still so I could find them,
instead of the other way.
The worst is RPS- they sent a semi to deliver a two pound package, and
got where they couldnt turn around.

Well Murray that pretty good for "OOPs"
Them SOB's just smashed a empty anvil flight case coming back from the R-390 (non A) buyer.
Looks like Godzilla took a big bite then a big _
2 huge holes with this black muck and red oil saturating the foam ...(fork lift ?)
The YL rep say's it was improperly packed...WHAT ?
I dont know, Perhaps this is the new R-390 ventilation mod.
.......Boy am I pissed off !
I cant ship the other radio now

Actually, you don't need a business address for Fed Ex.

Fed Ex now has a ground service that I've been using for a couple of years. Haven't had any problems with it at all, and it's a heck of a lot cheaper than UPS.

Several years ago, when I owned my own business, I had UPS deliver some C.O.D. packages. I made a mistake and paid for them with cash. A few weeks later, UPS comes back to me and tells me they lost my check and asks me to rewrite the check. When I explained that I paid in cash, they told me I was mistaken, and demanded another check. This went on for a couple of months and then I started getting harrasing phone calls from attorneys representing UPS. It was a total mess, and ended up costing me several thousand dollars. I agree, I'll never use UPS again.

In article <4bfc7bb.0201241924.4fdd5373@posting.google.com>, k3vr@hotmail.com says...

> Get this: I send a package to Colorado via UPS. I label the package with the printed Label ups.com gives you when you have an account with them. I drop off the package at an "Authorized UPS Shipping Center" because it is insured for $3,400 and that is what UPS requires. I get a receipt from the shipping center stating that the item has been properly packed and labeled. OK so far... Four days later a guy in New Jersey at a communications business calls me. "We have your package and we don't know why it came here, but we opened it and read your letter inside. Looks like it is supposed to go to Colorado, what should we do with it?" I tell the guy thanks for calling me and I will call UPS and get back to him. I call 1-800-pickups. The first "support" person hangs up on me. The second says I "should take it up with the shipping center" (all they did was hold it for the truck pickup, the UPS driver in reality should have scanned it upon pickup). I ask to speak to a supervisor. The supervisor is cooperative and I tell her I want the thing overnighted from New Jersey to Colorado since it is "Guaranteed" to be there tomorrow by UPS. She says, "OK, I will call NJ UPS and set that up, they will call you in one hour or less." I thank her VERY much and ask for her name, title, and location. She complies. I am a happy camper. One hour passes, no call, two hours pass, no call. I call UPS back and ask to speak to this individual and... No such individual exists!! By this time it is late so I call and get another person in the morning who tells me to "take it up with the shipper..." I ask to speak to HER Supervisor. Her Supervisor says she will investigate and get back to me.... 7 hours go by. I call her and ask for a status report. Luckily, "she exists." Her answer? "Sir, since the package arrived in NJ and it was signed for; it is considered a completed delivery." I ask, incredulous... "What about my package?" "Sir," she says, "You need to contact the individual in NJ who has your package and ask him to forward it to Colorado for you. Since it was never scanned into our system there will be no charge." UPS at no time took responsibility for this transaction, despite my signed receipt. At no time did they offer a viable solution to a problem they created. At one time I received FALSE information from a UPS employee just to get me off the phone. Hence; I WILL NEVER DEAL WITH UPS AGAIN, and I would urge all persons to carefully consider all other alternatives before trusting anything of value to UPS. Only through the kindness and honesty of an individual in NJ was I able to locate and send my package to its proper destination. Rest assured, when it gets to Colorado, it will not have passed through UPS hands.

I just use the US Postal Service. Not always the most gentle, the fastest, or the cheapest but it is the most convenient and reliable. I have heard too many horror stories about FedEx and UPS to want to use them for anything. And at least USPS can truly deliver anywhere in the country.

I just ordered from Universal in Ohio. I asked them to ship via USPS as I
have had problems with UPS as I stated in another recent thread. I did have
a RS DX-398 stolen by USPS and the box was returned empty! Just so happened
I was in a hurry and didn't insure it. Makes me wonder if an uninsured

packages are targets for theft, since that's the only one stolen. I filed a
complaint but to no avail. They told me there are some dishonest people
working for them. :(

Sounds like you should have filed a complaint with the Better Business Buro,
your state's division of consumer affairs and the state Postmaster General.

Hi OM,

Why use a third party shipper like those stores ?
Pay the fee and call them for a UPS Pickup and you are using UPS
(or fedex or usps whoever picks the box up)

by using these 'authorized centers' you are under their thumb if an error

is made. Lost or damaged, that third party shipper has to file the claims

with ups/fedex/etc.   not you because you are not shipping the box, the
third
party is shipper and selected the carrier ups etc.

Another tip, if you are buying an item from someone either on auction or swap, do not let the seller ship the item, call UPS or FEDEX and have the go and pick it up by using the call service. small fee BUT big difference..

you are now the sender and you can file the claim if lost/stolen/damaged.

otherwise, you are under the thumb of the seller and only seller can file the claim with carrier.

Very complicated but once learned you can have your packages arrive !

While I suppose there is a first time for everything, I've yet to have a problem "with UPS" - myself being a shipper. As for the others, I've had items delivered to me from shippers via Fed Ex, but not RPS. Not even sure if RPS is doing business in our immediate area. I've sent light and heavy items via UPS and never yet a problem or complaints from the receiving parties of any.

Two problems I "did" encounter........

1. A package that was allegedly shipped and I never received it. NOR did my UPS delivery man recall it. According to the shipper of the item, the item was taken to shipping site. The package and ALL paperwork then disappeared. The tracking number supplied to me at drop off, kept showing "not a valid number". Assuming the shipper did ship it, which I had no reason to doubt as I dealt with them before, sounds more like a clerk problem to me. Though it did take a few weeks to get my money/items replaced, I can't say for certain whose fault that was..... as to the delay to conclude it. Could have been a delay in shipper to start the investigation, the shipping site to do their own investigation. I don't know. All in all, it wasn't too unreasonable an amount of time once I knew "something" was being done about it.

2. Around here, there used to be a few UPS shipping sites. Most stopped taking UPS.. (Mgmt changes they said) Down to about 3 sites within reasonable travel distance, two of them were reasonable in cost both small and large, even with
the site's service fee included. The third was ridiculous.

At the 3rd, I paid as much to send a small box out - as a box 25 times bigger than that - previously from one of the other sites. The other sites are now shut down. I think the 3rd shipping site was over charging on the service fee. I'm not aware of what they are allowed to charge for their fee, so I had no way to challenge it. I suppose I could have said forget it, but the clerk wrote it up before giving me an exact total INCLUDING their fee. Not wanting to look or feel like an idiot (cheap or confrontational) especially without facts to support my claim, I decided to swallow my pride and to let it go this time. But, I've yet to go back. I've been shipping primarily Postal only for that reason - unless I happen to be going near a different site which is a distance away from me.

Now I have to use the charts online for UPS and Postal to get the best rate for the individual package. Personally, I still would prefer UPS. And, if I AM going out and about, I will make the trip to the distant UPS site....

Unless some one can prove to me beyond a shadow of a doubt - otherwise, I don't believe the UPS service itself in any way, was responsible for the two episodes I experienced.

My company (TFW Inc) has stopped using UPS for similar reasons.

We were receiving a %20 lost shipping and damage rate.

All packages now go thru USPO Priority. Not a single failure in the last 300
ships.

You should have checked old messages within these groups, we have been
talking about avoiding UPS for YEARS!

For packages such as the one you describe, there are other very good
alternatives such as Osborne Air Freight who want to do a good job.

Welcome to the "piss on UPS" crowd.

Jon

I ask EVERYONE that I do bussiness with to NOT use UPS. They lie about many things, and if you do not keep copies of EVERYthing that shows up on their tracking pages, they will deny any problems with their service. .....Sam in Phoenix

>Get this: I send a package to Colorado via UPS. I label the package with the printed Label ups.com gives you when you have an account with them. I drop off the package at an "Authorized UPS Shipping Center" because it is insured for $3,400 and that is what UPS requires. I get a receipt from the shipping center stating that the item has been properly packed and labeled. OK so far... Four days later a guy in New Jersey at a communications business calls me. "We have your package and we don't know why it came here, but we opened it and read your letter inside. Looks like it is supposed to go to Colorado, what should we do with it?" I tell the guy thanks for calling me and I will call UPS and get back to him. I call 1-800-pickups. The first "support" person hangs up on me. The second says I "should take it up with the shipping center" (all they did was hold it for the truck pickup, the UPS driver in reality should have scanned it upon pickup). I ask to speak to a supervisor. The supervisor is cooperative and I tell her I want the thing overnighted from New Jersey to Colorado since it is "Guaranteed" to be there tomorrow by UPS. She says, "OK, I will call NJ UPS and set that up, they will call you in one hour or less." I thank her VERY much and ask for her name, title, and location. She complies. I am a happy camper. One hour passes, no call, two hours pass, no call. I call UPS back and ask to speak to this individual and... No such individual exists!! By this time it is late so I call and get another person in the morning who tells me to "take it up with the shipper..." I ask to speak to HER Supervisor. Her Supervisor says she will investigate and get back to me.... 7 hours go by. I call her and ask for a status report. Luckily, "she exists." Her

>answer? "Sir, since the package arrived in NJ and it was signed for;
>it is considered a completed delivery." I ask, incredulous... "What
>about my package?" "Sir," she says, "You need to contact the
>individual in NJ who has your package and ask him to forward it to
>Colorado for you. Since it was never scanned into our system there
>will be no charge." UPS at no time took responsibility for this
>transaction, despite my signed receipt. At no time did they offer a
>viable solution to a problem they created. At one time I received

<<snip>>

Rest assured, when it gets to Colorado, it will
> not have passed through UPS hands.

Having said that I, too, would not use UPS, I have broken my word quite a lot! Most of the
Carolina Cyclone antennas I build and ship go out UPS. I use PVC pipe for shipping containers, and that has proven to prevent the breakage they are so notorious for. I used to
get lots of broken coil covers, either by simple mashing, or slinging them on and off trucks. By
using plenty of packing material (bubble wrap, newspaper, etc), I've had pretty good results so
far (knock, knock).

When I worked in the rail industry, I used to ship as many as 20 packages per day. What got me torqued at them was the time I carefully packaged a boiler water sample, cushioned the plastic jar with several layers of bubble wrap, and put some foam sheet on the top. The package came back marked "improperly packaged". The kicker was, it wasn't even the same
box I shipped it in and all that packing was missing! I called them and received the "Yeah, right!" treatment from the rep, and I went ballistic. With quite a bit of invective, I explained to
the smart-assed lady that the box wasn't even in the same SOBing box I shipped it in. I got
pretty sassy (putting it mildly) with her! Finally, I told her, "Tell ya what, lady. You pull your
records and see how much we ship with you. I happen to be the one that decides who I am
gonna use, and YOU don't tell me what box I shipped a package in. And from now on I will
use Fed Ex. YOU can turn it crossways and shove it-- I don't give a ****!" I started shipping
via alternate shippers, and I guess UPS sort of "missed" our volume because it wasn't long before one of their suit and tie types was in my warehouse wanting to know what happened.
I had the chance to tell him, of course, and a chance to get a jab in at their customer service,
telling him about how their smart-mouthed lady was "able" to tell me what carton I shipped in.
He, too, was a little upset when he found out that they had switched boxes on me. It took a

lot of promises and begging and several visits from the customer rep before we shipped with them again.

If they pull a caper like that again on me, now that I am running my own business, it'll be a cold day in you-know-where before I ship with them again.

To add more lunacy to the ranting:

I used to own a small computer business and had to have some parts shipped
UPS red (overnight) from Seattle, Wa to Waco, Tx. The next day the package
did not arrive, so I called my supplier who said the shipment went out with
the other overnight pickups at 4pm. We checked the tracking # supplied, and
it shows that the package never made it to the first checkpoint, but WAS
picked up. I had a good supplier, so they overnighted me the part again and
I received it the following day. Here's the gripper though....about 1 week
later, a VERY confused FedEx employee walked into my store with my package.
It did not have any FedEx shipping credentials on the box, just the UPS
shipping labels and my address! The driver did not know how the package
made it anywhere with UPS suff on it in the FedEx system, much less how it
ended up in his truck for delivery.....all we can figure is that UPS and
FedEx were at my supplier's dock at the same time and my package went with
the wrong carrier....

Go figure...

Brian

Something that most people don't know about is that the radiation of
mail to eliminate anthrax WILL destroy electronic equipment and part.
There is a somewhat benign warning on www.jedec.org.

Bottom line, don't use the Post Office to mail electronics to zip codes
that begin 202 through 205.

Many of the parcels I deliver for the US postal service are ones that the sender and probably the recipient wanted to go fedX...but fedX remailed it to save themselves a trip.Might as well use the postal service to begin with.

Why did it cost you any money? You had to pay the driver to get the
package. That is sufficient proof that you paid. If UPS lost the payment,
that is not your fault.

I have been that route. A quick letter from my attorney set them straight.

But I avoid UPS whenever possible. They often leave packages sitting on
my front doorstep in the rain. The sometimes leave packages that require
a signature - good thing that I am honest and don't claim that it was
never delivered.

does anyone have any info on converting the Alpha 78 to a different tube ?

It runs 3   8874's (3CX400A7)

I was thinking about maybe a pair of 3CX800A7's or maybe an 8877

any info would be helpful

I see from the amp reflector that it's been done, but how well I dunno. Once you do the conversion to 3CX800's what do you do to the cover to match up the ventilation holes? And, the plate voltage isn't high enough to make an 8877 worthwhile.

I'm impressed with the 800's in a friends amp, but sure wouldn't deface the 78 in a hatchet job on the chassis and cover. I just bit the bullet and bought three new Eimacs (After shopping around a bit!) and installed them. The originals had lasted through 19 years of pretty hard use and certainly didn't owe me much. If these will last another 19 years, I probably won't really care.

Hi, I passed my general FCC exams and now looking for an all band HF
rig. But need advise on the selection of a good new or used HF
transmitter/receiver. I also listen to shortwave broadcasts, and would
look for a radio that would be broadbanded in the receive capabilities
also.

So which is the best radio to look at?

Thanks and 73's
Richard

I have this not so old power transformer with some very good looking #16 or greater copper wire. Looks like it is coated with enamel. This will make great open wire transmission line. The transformer laminations are fused together by shellac or some similar compound used in the impregnating process. I wish to unstack the laminations so that I can unwind the coils. I tried putting a transformer in my wood stove furnace but the wire broke and became very soft. How do I loosen up the laminations?

I had this very samething happen. They put the wrong label on my package and my label on another package thus, the two packages were sent to the wrong parties. I contacted UPS and they took care of it for me. Not willingly at first because they couldn't believe that could happen. They contacted both parties and explain their mistake, picked up the packages, and made it right.

Take it to an electric motor repair shop and have them run it through their
vapor stripper.

A few years ago someone mailed a solution to the following problem to me,
but I have since lost it.

I have a Kenwood TS-520S, and I am wondering if anyone knows how to make a
homebrew power converter for the radio so I can run it from battery power.

Please respond via e-mail as I don't check the newsgroups often.

Thanks in advance,

Brad Sheppard

This is why I kinda like the usps - they take just about anything - they
don't abuse packages like fedex and ups do and they are much cheaper. Plus
they offer insurance, delivery confirmation and other online tracking
services.

I was thinking of getting a wireless mouse for my computer but was wondering if
the radios would interfere with them. Does anyone out there have a wireless
mouse on their computer? If so, have you noticed if keying your radio  (HF,
VHF, or UHF) interferes with the mouse in any way?? Any info on this subject
would be greatly appreciated!! Please email me direct at: N9RK@aol.com
Thanks!

A new radar study shows that the ice sheet feeding the Ross Ice Streams
is growing.  That is a dramatic change in an ice sheet covering about a
third of West Antarctica and that has retreated nearly 1300 kilometres
since the end of the last ice age.  The big question is if the change
marks the end of the retreat, or just a short-lived reversal.  So much
for global-warming!

I agree. I've been shipping my Ebay packages exclusively with Fed-Ex Ground and haven't had a single problem. They are faster, cheaper, and friendlier than UPS will ever be. I haven't had them once ask about how an item was packaged or opened a package at the counter to find out. Fed-Ex Ground will usually beat their "estimated delivery date" by a day or two and they've been known to deliver packages on Saturdays and Sundays at no extra charge.

I'm in Puerto Rico and Fedex treats this part of the US like rural Zambia or something. By their definition, PR is an "international" destination. A recent ebay purchaser pointed out to me that he could ship a 15 pound printer from Indianapolis to Miami, dropoff/Fedex ground for $7 and change. Same item to me costs $40+. And if I'm the sender I get stuck with pickup charges (no local dropoff point) and we don't have Ground Service anyway. (They don't publish the tariffs on the local website but my last ENVELOPE sent was $27)

As much as I despise that sort of overtly discriminatory business
practice, I'd sure like to have the same service available so that I
could thumb my nose at the ever-increasing USPS Priority rates....even
tho I can't complain about their service.

My compnay issued us Kenwood 372g radios for work with only our group channel and the main dispatch channel programmed in. Is there any way to program additional channels? I would like to monitor some of the other groups here that were not programmed into my radio. Asking the tech here got me nowhere since he is not very friendly and goes 'strictly by the book'. I currently use a scanner to monitor 4 other groups but I hate to have to carry two radios when one will do.

I understand the why the other channels were not programmed, and this is strictly a personal choice to program my radio - even though it is company property.

Is there a manual for this radio on the web some where?

Thanks in advance,

E. N.

> LIKE I SAID UPS IS FULL OF SHIT 24/7!
> > Brian

I will never use them and I'll bet most of the people standing up for them either work there or own stock in the company! There is no way they can give proper care to your parcels as they hire college kids and most of the handlers are replaced every semester, I worked there and they had no training, no breaks, and you were told to run to the time clock when they got to the point they could spare you for the night.

I had a person ship an item to me ups and it arrived with a split in it, from a drop of at least 10 feet. They acted decent on the phone, but gave me the royal run around. They give you a step by step process that just goes on and on until most people give up. They wanted to have a driver pick the item up and then give it a ride back to the original shipper and have him deal with the damage----but I had already paid the individual for it, and he had little motivation to collect for me! I was told by ups that I had no rights to make a claim, as if I had no idea what the item was worth, although I had just paid for it!

At first they said that if the claim amount was less than $100, they could just pay me and let me keep the item. When I took the package up to the ups customer service office here, the girl started telling me she could not do what she had said earlier on the phone and again started to try to just send it back to the sender. I asked for her supervisor. Now I got the full UPS BS--it was probably shipped pre-damaged, it was re-used packaging, it was improperly packaged, etc. The fact you have insurance means nothing, they can still use all their delay tactics on you until you give up. They would only send it back to the shipper, and he had to spend a lot of time going around and around with them to get the claim paid a long time later.

The sick thing about this is that people use UPS authorized service centers that are conveniently nearby, and most people think it is the same rate everywhere just like the post office! In reality the Mailbox etc. and all of them charge whatever they want---and most people never question it. For what you are paying you could be paying less for FedEx overnight! The last time I went to Mailbox Etc. they wanted $36, I asked how much of that was their upcharge and they said, we don't know, it is figured in the computer! I drove it over to the real UPS shipping office and it was only $18!

Typical piece of junk from Yaesu for starters. So-so receiver, poor excuse
for a transmitter. Eats batteries like nothing you have seen before. Carries
like a purse...on a scale of 1 to 10 on the "Dork-O-Meter its a solid 8.
Spend a little more on the Icom IC706MKIIG..you can run it QRP if you want,
not much bigger than the FT-817 and makes a decent SWL RCVR. Makes 50 Watts
on 144, 20 on 440Mhz and 100 Watts on all other bands. Can be controlled
with a PC...Eddie

Some 3 ring plugs might work some of the time IF your lucky. The VX5-R uses
a 4-RING plug to connect to the radio....Eddie

hey tom
```

i dont know what book to tell you but i can tell you that the 2 meter offsets
in the USA are 147.000 and up are a plus 600 and anything below that is a
minus 600 the only odd one is the 147.000 which can be either one
if you go and pick up the ARRL repeater directory it gives a listing of the
repeaters in the country including there offsets and any PL tones if any

Picked up a couple MTX-800 and 810's on Ebay.   When I try to read code plug. I get a "Power Fault" , "Check cable/Rib" ect. When I run the software for my HT-600's or MTX-820's on the same setup, all is well. So I think my setup is OK (Right Com Port, RIB power, Interface Cable ect.) The versions of software are: MTX-800 R01.00.01(19-Oct-88)
MTX-810 R02.01.00(7-Aug-92)

Are these "Boat Anchors"? Is there a way to reset the code plug? Could it be they were programed wit a newer version of software?

Any ideas????????????

Jim Reid

Make sure you're using a really SLOW computer. I have trouble with 810s on
anything faster than a 133mHz Pentium.

I am looking at retirement in two years. I am wondering what it would take
to get involved in Emergency Services? I think pass the tests. What kind
of equipment would it take besides battery and antennas? Am looking to get
my Extra later this year, but am wondering if there is much call for General
Class Licensees in these services?
Being a future pensioner, money will be limited.

Also, I know there is a Salvation Army net out there somewhere and thought
their internet url was saturnnet or something like that. Would like to know
the frequency and date and time of their net. Also would be interested in
Red Cross.

hey rich
i dont think there are on the 2 meter band in the USA
6 meters have some 1 meg offsets as well as 500 but not 2 meters

The range of a pair of ICOM T81A's are easily half a mile with stock antenna. The range improves with an aftermarket antenna (Comet SMA703). At 0.6 miles in our test the signal increased about 75%. The output is one watt.If you are not familiar with the T81, it is a quad band HT. Covers 6M, 2M, 70cm and 1.2 GHz. I am also able to use a repeater that is several miles away.

Your comment about range may have some truth from HT to HT but in populated areas such as the SF Bay area where the person requesting this is located, there are LOTS of 1.2 GHz repeaters, some inter linked and coverage is very good. I have worked through repeaters dozens of miles away with my 220/1.2GHz HT on 1.2 GHz with full quieting.

You must be in an area with few people and few mountains or tall buildings or towers.

Richard,
the most bang for the buck is with the Alinco DX-70. You get HF (160-10M) plus 6M on the same radio under $700 at both HRO and AES. HF is great but will get boring unless you set some goals, like obtaining a WAS (Worked All States) award or WAC (Worked All Counties), etc... DX also has it's list of special awards. Good luck and hope to hear you on the Triple HHH Net "The Net operates 364 days/year on a frequency of 7.235 mHz, starting at 0700 Z."

73,
Rob KH7WU

Dennis,

Only reason I posted that info is because there is a 2 meter repeater
with 1 mhz offset near me:

Check the ARRL Repeater Directory for Monmouth County, N.J......WA2EDD,
located in Holmdel.....Output-146.475.....Input-147.475

If there is one I'll bet there are more than one....rare maybe but there
are some.

Also, it may be that running from a DOS window will not work. Try running
from DOS - before the system boots up Windows.

What is available, and what groups are active, varies widely from area to area. You might try listening to various local repeaters to see if there are any nets going on - most such organizations will have some kind of weekly net. You might also contact the local police/sheriff and ask if they work with, or are aware of, any such groups and obtain a referral. Ditto local hospitals.

As for equipment, that depends entirely on what local operations may be going on. It could range from an HT with an extra battery to the skies the limit. Most groups will accept volunteers with whatever they have available.

Carl.

I just got three HF receivers "as-is", with service manuals,
which will make things _MUCH_ easier. They're:
o   Debeg E2000,
o   ITT-Mackay 3020A, and
o   Racal 6217E.

I want to buy operator's manuals for all three, and would like
to buy card extenders for all three, as well. Buying them will
be _much_ nicer than making my own.

I'll be happy to hear from anyone else who has one or more of
these receivers, or experience working on or with them.

I just got three HF receivers "as-is", with service manuals,
which will make things _MUCH_ easier. They're:
o   Debeg E2000,
o   ITT-Mackay 3020A, and
o   Racal 6217E.

I want to buy operator's manuals for all three, and would like
to buy card extenders for all three, as well. Buying them will
be _much_ nicer than making my own.

All are "as-is" and need work, and the only way to do useful
troubleshooting is with card extenders. I _might_ be talked
into swapping the ITT-Mackay and its manuals for operator
manuals and card extenders for the other two, plus a bit. It
depends on what the extra bit is. A "10" 75A4 or 51J3 would
certainly do. ;=)

I'll be happy to hear from anyone else who has one or more of
these receivers, or experience working on or with them.

Yes, boatanchor folks, these don't have glowbottles, but they're
of the same general era, and you folks know me, and I know you
might have some of these things ratholed.

Check contacts on the radio, clean off if needed. Also, if I'm correct the MTX800 software and the MTX810 software are not the same. The MTX800 will only do trunked, in comparison to the MTX810 "classic" which will do both conventional and trunked. Good luck, if you have any other questions drop a line.

Whats wrong with a nixie tube clock ? I know in todays world they are no
match for LED displays but the concept still works.

The ones possibly trialled by British Rail were referred to as Numicator
clocks.

Well.. Just before xmas, I sent him a radio after he paid for half of it, and.. guess what?
He's suddenly "disappeared" after saying he mailed two different money-orders to cover the other half of what he owed... I believed him when he said the first must have gotten lost in the mail, but a mnth later, I've still yet to have recieved the 1st or 2nd one he claims to have sent.

PS. What the heck is a stand-up guy, in this context? I assume you're not saying he's a funny.. ;)

And how did I attack you?  I see nothing at all, which I wrote, that could
in ANY way be a reference to you or anything you've done or posted.
Or are you maybe saying that I don't also have the right to post my
experiences?

i agree with you  you said nothing to him that could possibly be mistaken as an
attack
his reponse is what i would expect from someone who cant even post a real email
address
as for a stand up guy isnt that what a wife has for about 30 mins during the
wedding cerimony?

I have done some work in designing simple antennas for emergency communications on 2-Meters.

This is a link to my Ham page:
http://people.ne.mediaone.net/buck0/hampage.htm
It contains designs for 4 different 2-meter collinear antennas, a 2-meter SSB Halo, and some information on Go-Kits.
The ARRL Website also has a link to this page located:
http://www.arrl.org/tis/info/Yagi-V.html

This HALO design is not ground dependent and can be mounted atop a section of PVC. See comments! Easy to build. Cheep$$$

Some of my antenna designs are posted on the Erie County Chapters of ARES and RACES Website:
http://hamgate1.sunyerie.edu/races/antenna.htm
The ARRL Website also has a link to this page located in their Technical

Information Pages: http://www.arrl.org/tis/info/JPole-V.html

Have fun building!
73s

It's simple for anyone with CRIS access.

And *terribly* difficult for AOL to follow the trail...

What I think is:

You've posted this message a number of times to more than one news group.
That's considered spamming. How would you like to be reported to your
ISP and shut down? It can happen......

Not a news group cop - just a user that gets damn sick and tired of
repeat commercial messages on these news groups.

ME!

He's willing to take a chance because he's to CHEAP to spend money on
REAL advertising. His antenna is probably just as cheaply built. When
I start seeing advertisments in QST for it then I MIGHT be
interested............... BUT I DOUBT IT!!!!

I'm not sure GMRS is really going to serve your purpose. You can't get an organizational or group license. Each individual user would have to obtain his/her own license in order to use GMRS radios/frequencies. Licenses require no test, but do cost something like $85 for 5 years.

As for repeaters, new cost anywhere from around $2500 on up, depending on brand, features, etc. That does not include duplexers, antenna, feedline, etc. Depending on your location, you may be limited in either antenna height and/or transmitter power/ERP (north of Line A, near Canada, has 5 watt ERP restriction/limitation). Again, limitations on whether GMRS is the right choice.

AMATEUR RADIO NEWSLINE(tm) REPORT #1273 - January 4 2004
(Total Running Time with RAIN Promo: 24:48)

==

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio, FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

===

Amateur Radio Newsline report number 1273 with a release date of Friday, January 4 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A “V-E team” finds a way to test kids in one of the most remote regions of the country and the FCC again says no to expanding PRB-. These stories are first on Amateur Radio Newsline report number 1273 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO TESTING REACHES WHITE MOUNTAIN ALASKA

Ham radio examinations have finally come to one of the remotest areas of the nation. This, after a team of examiners from the W5YI VEC perform a fly-in examination session in White Mountain Alaska. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

White Mountain is a remote fishing village in the far North-West of Alaska. It’s major claim to fame is that its the next to the last checkpoint for the famed Iditarod dog sled race. And it wanted someone to come in and give ham radio exams.

The closest big city is Nome. White Mountain is only about sixty miles from Nome but its over some rather treacherous terrain. There are no roads in or out and all supplies to White Mountain have to be delivered by plane or boat.

But White Mountain does ham a ham radio operator for its mayor. He is reindeer farmer Tom Gray KL0CQ. And one of its school board members is Eric Morris KL7HT. Both will tell you that a temperature of minus 40 degrees Fahrenheit and a wind-chill factor of minus 100 degrees is not uncommon in winter. These were the conditions faced by a four member W5YI VEC test team when it chartered a plane and flew in on December 11th to administer exams to four adults and fourteen youngsters who were determined to make ham radio a part of their life.

The trip which cost $800 for the flight alone was sponsored by the Seward Peninsula Amateur Radio Club. Braving the weather were examiners Ramon Gandia AL7X, Michael Nurse KL7UJ, Scott Webber AL7RJ and Thomas Busch NL7H. Al four are from Nome. Most of those to be tested came from the Bearing Strait School District's only inland school. They had all been studying for their Amateur license as part of a search and rescue course. Neither the applicant or the VE team were disappointed. All eighteen passed the Technician class exam.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Those involved in ham radio testing are keenly aware of the problems faced by remote areas of Alaska. At last July's VEC Conference in Gettysburg Pennsylvania Jim Wiley KL7CC told the group that many applicants in Alaska are denied n Amateur Radio license exam due to the inaccessibility of their locations or the high cost of travel in that state. (W5YI)

**

HAM RADIO AND THE LAW: FCC SAYS NO ON PRB-1 EXPANSION REQUEST

Ham radio has lost yet another battle against deed restrictions, but the war is not over yet. At least that's what the ARRL appears to be saying in a bulletin that describes the latest skirmish with the FCC over this politically volatile issue.

In the latest round, the FCC has affirmed a November 2000 staff-level decision that declined to include privately imposed deed covenants, conditions and restrictions under the limited federal preemption known as PRB-1. That's the federal government policy requires municipalities to ''reasonably accommodate'' amateur communication in antenna-related zoning and regulation.

The ARRL last year appealed to have the full FCC review the earlier denial. The Commission turned down the League's Application for Review December 18 in a Memorandum Opinion and Order released December 26. As a result, it now looks as if the ARRL will bypass any further dealings on this issue with the FCC and will look for congressional relief instead.

The FCC itself even hinted that Congressional action by the ham community might be a next logical step. Its memorandum, opinion and order of dismissal did note that if Congress were to see fit to enact a statutory directive mandating the expansion of the FCC's reasonable accommodation policy that the Commission would expeditiously act to fulfill its obligation there under. Translated: If Congress tells the FCC to include deed restrictions under the provisions of PRB-1, it will be more than happy to do so. (ARRL)

**

HAM RADIO IN SPACE: PROJECT JJ - HE EAGLE HAS LANDED

AMSAT-NA's newest satellite project, known as Project JJ for the past year, now has a new and official name. This, as AMSAT North America President Robin Haighton, VE3FRH, announces that effective January 1, 2002, the satellite will officially be known as 'Eagle'.

The name Eagle was submitted by Bill Allen, W7US, of Tucson, Arizona. It was selected from a list of forty-five names submitted by twenty-nine satellite operators.

For his winning suggestion, W7US will receive a free dinner at the annual AMSAT dinner held during the Dayton Hamvention. We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report. (AMSAT-NA, ANS)

**

BREAK 1

Welcoming in the new year with ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the N7VGS repeater serving the Salt River Star Valley Wyoming and congratulating 13 year old Devin Cassity, on becoming the youngest ham in South West Wyoming. Devin is now KD7PHN.

**

EMERGENCY PREPAREDNESS: NORTHERN CAL TOWN CHOOSES HAM RADIO

Ham radio started the year with some very positive public exposure in the Los Angeles Times. The January 1st edition featured an in depth article about a Northern California town that will tap into older technology to prepare for future emergencies.

Worried that a disaster will knock out e-mail and cell phones, Los Altos Hills has decided to turn to its local ham radio community and make it the primary back-up to normal disaster preparedness communications. And as you might expect, the hams are more than ready to oblige

The complete story can be read at the Los Angeles Times website. The complex URL is http://www.latimes.com/news/local/la-000000203jan01.story. (Highlighted by ARNewsline™)

AMERICA AT WAR: POPCOMM COLUMNISTS SAYS “DONT TURN THE OTHER CHEEK”

Popular Communications writer Eric Force has some strong words that are obviously aimed at the pacifists who oppose the United States military retaliation against Osuma bin Laden and his al-Quida terrorist network. As a response to those he calls the “do-gooders of the world” who promote turning the other cheek, Force says to look, really look at the attack that brought down New York City’s World Trade Center twin towers. He then says that it could have struck a lot closer to them.

Force says and we quote: “Consider that it could have been you, your mom, dad, brother, sister other relative or a close friend in those planes and buildings who were terrorized, murdered and buried in the rubble.” He adds that just thinking about the incomprehensible terror, suffering and losses incurred by innocent human beings a the cowardly hands of international thugs continues to tear at his heart.

Force has dedicated his latest I-Waves column to the sights and sounds of September 11th that are available on the Internet and to the victims of the tragedy. Its a very compelling article. You can find it starting on page 66 of the January edition of Popular Communications Magazine that’s on newsstands right now. (PopComm)

**

AMERICA AT WAR: FEDS TO AID NYC TV STATION REBUILD

New York television stations will be getting federal help rebuilding transmitters that were destroyed in the September 11th terrorist attack on the World Trade Center. A total of ten New York area stations will receive eight point two million to offset the thirty million to forty million dollar price tag for purchasing and
constructing a new transmission facility.

According to the Broadcasting and Cable newsletter, Senator Charles Schumer managed to secure the funding as addition to emergency aid appropriation for victims of the attacks. As previously reported, there is some speculation that the replacement transmitting facility could be a 1500 to 2000 foot high stand-alone tower constructed near the former site of the Twin Towers. (Broadcasting & Cable)

**

ENFORCEMENT: NAL CANCELED

The FCC has canceled a proposed ten thousand dollar fine that it had issued to Jeffrey Alan Pettrey, This, for his apparent violation of Section 301 of the Communications Act involving operation of an unlicensed radio transmitter.

Back on July 30, 2001, the District Director of the Commission's Columbia, Maryland Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Pettrey for the infraction. Pettrey filed a response to the N-A-L on August 7, 2001 accompanied by documentation regarding his inability to pay the proposed fine. After reviewing Pettrey's response, the FCC conclude that cancellation of the proposed $10,000 forfeiture is warranted based on Pettrey’s inability to pay. (FCC)

**

ENFORCEMENT: FCC CANCELS CONVICTED HAMS LICENSE

The FCC has canceled the Amateur license of Kenneth P. Kelly, WT2FBI, of Greensboro North Carolina after Kelly failed to show up for a re-examination. But at the time of the FCC retest order Kelly was otherwise occupied. He was fighting criminal charges in relation to a jamming case in Ohio. We have this report:

--

On November 30, 2001, Kenneth Kelly, the ex-WT2FBI was sentenced to 5 years probation by the Judge H. J. Bressler in a Butler County Ohio court. He had previously been indicted on a 4 th degree felony charge of disrupting public service by his jamming and talking on the Middletown Ohio police radio system.

At his hearing, Kelly agreed to a plea bargain. He admitted his guilt to a reduced charge attempted disrupting public services. At the time the FCC pulled his ham radio ticket Kelly was being held in the Butler County Ohio Jail pending sentencing.

By way of background, a person later proven to be Kelly was first noticed on the Middletown police radio channel the third week of July 2001. Initially the police dispatch radio system was not recording him but that was soon remedied by city radio technicians. After several days of taping, it was observed that the voice on the police radio was similar to one heard on the local 2 meter Amateur frequencies.

Several members of the Dial Radio Club then assisted police by monitoring and taping Kelly on the 2 meter band. Tapes from 2 meters and from the police were then voice printed the aid of computers to check similarities. Dial club members also tried to direction find and locate the signal both on 2 meters and on the police channel.

Through some luck, detectives working with a metro housing police officer and discovered that Kelly was now living in their jurisdiction. After they interviewed him, they felt that he was the person interfering. As the investigation progressed, he admitted to detectives that he may have accidentally transmitted on their frequency by accident. He claimed that his signal may have been mixing with an FM broadcast station and another ham repeater.

But Police did not believe it was accidental, because he was taped trying to talk directly to the police dispatcher and the cars. Later Kelly did admit his guilt and entered into the plea bargain. Now sentence has been passed by both the local court and the FCC.

For the Amateur Radio Newsline, I’m Burt Hicks, WB6MQV, reporting.

--

When he was finally caught Kelly had a Yaesu VX-5 hand held in his possession that had been modified to transmit out of band. The assistance of the Dial Radio Club members is credited with helping to solve this case.

Note: Information and documents from the case can be obtained from the Butler

County Ohio Clerk's office or online at: http://www.butlercountyclerk.org/ Click on Butler County Court Records Search. Then enter Kenneth Kelly. (FCC, Dial ARC, others)

**

ENFORCEMENT: MITNICK TO FIGHT TO KEEP HIS HAM LICENSE

Another ham who appears to be getting ready to do battle with the FCC is former computer hacker turned talk show host Kevin David Mitnick, N6NHG. Amateur Radio Newsline’s Bill Pasternak, WA6ITF has the latest:

--

As reported last week, the FCC is challenging Kevin David Mitnick's request to renew his ham radio license. The agency claims that his criminal background raises a substantial and material question of fact as to whether Mitnick possesses the requisite character qualifications to be and remain a commission licensee.

Now, N6NHG has told the U-K Newspaper the Register: "It's just another example of them trying to harass me. Now I've got to spend money to keep a ham license."

Mitnick insists that he has totally abandoned his former ways. The Register article notes that that he was recently called to testify before Congress on federal computer security matters. Also that he spent two days briefing the U-S Commission on National Security on these issues. Mitnick tells the Register that he cannot understand why the government is now questioning his character.

Mitnick is currently the host of the radio program called The Dark Side of the Internet. It airs in the Los Angeles area from 5 to 7 a.m. Sunday mornings over radio station KFI 640 AM. And in a recent appearance on Coast to Coast A-M hosted by Art Bell, W6OBB, Mitnick said that he is hoping for a career in computer security once his term of supervised release from prison has been completed.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complete Register story and interview with Mitnick is on the web at a rather long and complex U-R-L. You will find it at http://www.theregister.co.uk/content/55/23494.html (Adapted from the Register)

INTERNET SECURITY: CIA GOES OUT OF ENCRYPTION COMPANY FUNDING

And speaking of Internet security, word that a Central Intelligence Agency funded company that allowed Web surfers to browse anonymously has closed. According to news reports, Emeryville California based SafeWeb enabled Internet users to gain access to the World Wide Web and browse sites through its encrypted service. This made their on-line habits and history untraceable. In the 2000 - 2001 fiscal year, SafeWeb received one million dollars in funding from the U-S Central Intelligence Agency's venture capital arm. (published reports)

HAM RADIO BUSINESS: AMATEUR RADIO TRADER CEASES PUBLICATION

Ham radio Internet auction sites may be responsible for a twice a month ham radio equipment sales magazine going away. This, after Amateur Radio Trader magazine announces that it has ceased publication.

According to Editor Barbara Patterson, KF4MMV, the Amateur Radio Trader was no longer a viable product. She says that the firm will be redirecting its resources into other areas.

Meantime, the company has also pulled its amateuradiotrader.com website off line. But unlike other publications which have gone under, in this case subscribers are being reimbursed for any outstanding issues. In addition to handling buy and sell ads, Amateur Radio Trader also donated page space to advertising the annual Newsline Young Ham of the Year award. (ARNewsline™)

**

HAM RADIO HERITAGE: MAKING WCC A PART OF THE FUTURE

A ham is campaigning to preserve part of radios past and have it become a part of the future. This as Lewis Masson, K1LJ-S, says that the town of Chatham Massachusetts should convert the site of radio station WCC into an Amateur Radio station along with a training curriculum to teach the kids in the area about communications technology.

WCC is one of the original Marconi Marine Radio Stations. Masson is an ex-marine telex operator at WCC. The site was recently turned over to the town of Chatham and Masson believes it is important to preserve the operations building as an operating amateur radio station and keep the hotel building as a museum to preserve and display memorabilia.

Masson says over the Internet that he has formed a committee to work on this project and that they are looking for nationwide support for this campaign. If preserving the past as an investment in the future is of interest to you, please contact K1LJS by e-mail to lemasson@juno.com. (Internet)

**

SPECIAL EVENTS: HAM RADIO UNIVERSITY 2002

A reminder the third annual Ham Radio University event takes place on January 20, 2002. Location is the Babylon Long Island New York Town Hall Annex with the doors opening at 9 a-m Eastern time.

Ham Radio University is a day of education about Amateur Radio. This there will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced Amateur Radio operator. The focus will be "hands on" with many demonstrations. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

For more information about Ham Radio University, please contact its Chairman Phil Lewis N2MUN by e-mail to n2mun@optonline.net. You can also get in touch with ARRL New York and Long Island Section Manager, George Tranos N2GA by e-mail to n2ga@arrl.org. Also check the Ham Radio University website for a full list of forums, directions and talk-in information. Its in cyberspace at www.arrlhudson.org/nli/hru2002.htm (N2DO)

HAM RADIO RECORDS: BEST OF THE WEST AND VHF CONTEST HONOR ROLLS

Tim Marek, K7XC, says that he has updated W6 / W7 & "Best In The West" VHF Contest Honor Rolls. They are now available at the following web sites.

http://k7xc.tripod.com/VHF_Records/index.html s the stand alone records page.
http://k7xc.tripod.com/K7XCweaksignal/ is where individual links can be found to each contest.   (VHF Reflector)

**

HAM RADIO SCIENCE: NEW 6 METER PROPAGATION BEACON IN WASHINGTON STATE

Rich Ewing, KO7N reports over the VHF Reflector that Bruce Shurtz, W7BAS, has installed a propagation beacon in gridsquare CN87TG near Kennmore Washington. It operates on 50.069 MHz putting out 10 watts to a 5 element yagi pointing 90 degrees. The beacon is operational 24 hours a day, seven days a week. QSN reports go to W7BAS, at his callbook address. (VHF Reflector)

**

HAM RADIO IN SPACE: VERY FEW LAUNCHES

Peter Guezlow, DB2OS, reported that 2001 has turned out to be the slowest year for space launches in nearly 40 years. Ham radio or otherwise. According to DB2OS, only 58 flights reached orbit, and there was one complete failure.

Guezlow says that historians note that we must look back to 1963 to find a year that produced fewer launches. He says that in 2000 there were 82 launches to orbit plus three failures. By contrast the most productive year was 1984 when 129 launches delivered payloads into orbit.

But there is at least one bright note. Russia successfully placed five satellites into orbit recently after launching them aboard a Zenit rocket. The cargo rocket, carrying three Russian, one Moroccan and one Pakistani satellite, took off from the Baikonur space center in Kazakhstan. (AMSAT, ANS)

**

HAM RADIO IN SPACE: NEW INDIA WEBSITE

The AMSAT-India website has been officially launched recently by the government of India and the Department of Space. VU2POP says that you can check it out by taking your browser over to www.amsatindia.org. (ANS)

CONTESTS: HUNTING LIONS ON THE AIR

The 31st annual Hunting Lions in the Air contest will take place on the weekend January 12th to the 13th. The contest period will be 48 hours and will run from midnight UTC Friday night to midnight UTC Sunday night, and all hams are welcome to participate.

According to its sponsors, the objective of this operating event is to create and foster a spirit of international understanding and cooperation among radio amateurs and members of the Lions Clubs through the use of world-wide radio communication. The contest also commemorates the birthday of Melvin Jones, the founder of the Association of Lions Clubs who was born at Ft. Thomas, Arizona on January 13, 1879. (Q-News)

**

DX

In DX, word that the recently postponed Ducie Island Dxpedition is on again for March. Ducie Island became a DXCC entity last November and it immediately jumped to the top of the most wanted contact list. But rough seas scuttle the first attempt to put it on the air. (RSGB)

Meantime 6 meters continues to be the V-H-F D-X band of choice. On Monday December 31st, Kevin Bishop WB8XX, says that he started hearing O-H-1-X-T at 1300 U-T-C on a backscatter path. From then on until 1620 U-T-C he worked 8 new countries and over thirty new grids in Europe and Asia. (VHF Reflector)

**

STRANGE TECHNOLOGY: ARE CELLPHONES KILLING GHOSTS?

Now, from radio communications to the effect of radio communications on supernatural communications. This, as a British expert who has spent years researching the occult says that cellular and other mobile phones are killing off ghosts. Don Wilbanks KC5MFA has the details:

--

No, we are not kidding you. In fact, Tony Cornell, of the Society for Psychical Research, has told the London Sunday Express that reports of ghost sightings started to decline when mobile phones were introduced 15 years ago.

According to Cornell, ghost sightings had remained consistent for centuries. In fact, until three years ago the society received one or two new ghost sighting reports every week. But with the introduction of mobile phones 15 years ago, ghost sightings began to decline to the point where they are not receiving any.

And why are there no longer any ghosts being observed? Apparently paranormal events, which many scientists attribute to unusual electrical activity, my be drowned out by the electronic noise produced by cellular telephones and text messaging pager transmitters. And according to the newspaper, the lack of ghost sightings could adversely impact on the nations economy. It says that haunted tourist attractions in Britain could be under threat if the number of cellphones continues to grow from the present figure of about 39 million now in use in the U-K.

Don Wilbanks, KC5MFA.

--

And all of this begs that one question be asked. If ghosts are the spirits of the dead, how can anything actually kill them? (Science Today)

You should have picked up the Yeasu FT-100 and the ATAS-100 antenna. That is
the down fall of the 706 is that you have to grow an antenna farm to use it.

Hi,

I moved and I want to update my license and renew it. Is there a place on the FCC web site that will allow me to renew/update my license?

I have been away from ham radio for many years. I read some about the recent license class restructuring. If I have a General Class license now, will it remain a General Class license?

Any info appreciated! Thanks, Keith N8AQR

Yes, you can, and with the delays in mail to government offices,
definitely much faster. You need to register in the CORE system, which
includes the ULS system. Once you have done this, you want to go in
and make an "administrative update" to your license. Renewals can also
be done if your current one has not expired (with address change all
at once). If you have lapsed more than a (one year?) grace period, you
have to retest. You would have to check with a VE group to find out
how much of retest you would need.

The latest changes in November really improved the system from the
original.

>I have been away from ham radio for many years.  I read some about the

>will it remain a General Class license?
>
Once you have a license, you can keep renewing it and have the same
privileges. This includes the Novice and Advanced ones, even though no
NEW ones have been issued since the restructuring in 2000.

HTH,
Happy trails,
Gary (net.yogi.bear)

Hi all

I have a Compaq Armada 7730MT and would like to use it for PSK31.

Unfortunately I do not have a manual so do not know how to get at the 'line out' and 'line in' connections.

Can anyone help please

73s

Mike

hey mike
i am not familar with that laptop but you should be able to go to compaqs website to get a copy of the manual
also if your computer plays sounds thru a couple of built in speakers there should be a access panel across the back or side that will have a small headphone type jack or two one maybe labled mic rather than line in
good luck

Hey, I'm thinking of starting up on radio broadcasting with a talk
station, 24/7. What do I need in order to get started, like an
antenna... equipment, etc... Also, how much will all of this cost?
Thanks.

You can expect to pay a _lot_ of money for an AM broadcast
```

station license, assuming you can even get one in your area. The
FCC may not even have any allocations for your area, or only for
a relatively low-power station.

I'm not at all sure where to start the process of starting up a
broadcast station from scratch. Perhaps there are broadcast
consultants or whatever who have expertise in this.

One thing is certain: as I wrote above, it's going to cost a lot.

The first thing you need to get is and understanding of the difference between amateur radio and broadcast radio.

>
>Can anyone help please

My laptop, an NEC, has no 'line-in/line-out' connections either.  Using a
'rigblaster' in my case, I use the headphone jack as 'line-out' and the
microphone jack as 'line-in' .  You'll have to play with volume levels to be
sure you don't overdrive your rig on PSK31, but once set up, it's a breeze.

if all you want to do is have a talk show i would suggest a much cheaper
way and thats to do it over the internet via streaming audio that way
all you need is a webhost who does that sort of thing and a mic on your
computer

Can anyone tell me if there is an alternative programming software for the
Kenwood TH-G71A.  I downloaded the software from Kenwoods FTP site, but am
wondering if anyone has an alternative that they like more then Kenwoods.

You can find low-power AM or FM transmitters
that can be used to cover your neighborhood.
I can't speak to the legality of these; here is
the Federal Communications page dealing
with low-power broadcast:
http://www.fcc.gov/mmb/asd/lowpwr.html

Note there is a new low-power license
available from the FCC, but it is for strictly
non-commercial use.

A leading supplier of low-power stations is
Ramsey Electronics:

http://www.ramseyelectronics.com/fm/fmequip.htm

Hope you find what you need--and stay legal!

Regards, Dave W1DAY

Hi All

Just a reminder that VK Classifieds - Australia's busiest online classifieds section can be found at:

http://www.vkham.com

You can browse hundreds of adverts and even place your own - ONLINE INSTANTLY! You have full control over your advert. You can even place a photo of your item online in your advert.

This is a totally free service, open to both ham and non-ham operators but please read and abide by the guidelines of use for the site or your advert may be deleted.

Cheers....Allan VK2CA

I've never seen one but I know several people who bought the 756 pro. All
of them are happy with it. Any 756's that I have heard on the air, had
very good TX audio quality.

Hi all

anyone know the ins/outs/way to dupe sattellite radio?

"Your Honer Sir, I will stop collecting photons that land on my property when
the sattelite broadcasters stop spraying them all over my farm"

attributed to the first guy to be sued for a sattelite dish and won. However,
descrambling the hbo is illegal!

TNX

Hi gang,

I have had problems with rf getting into the mic section of the 850 when a KAM/KAM Plus is connected using the 13 pin plug. Kantronics had a fix by installing either a capacitor 1pf or so in the plug. Kenwood also had a fix but it required rig surgery. Anyone know the Kantronics recommended fix. I have been searching all over for it and have not had any luck and I can't seem to find my hand written documentation.

Thanks
Keith

AMATEUR RADIO NEWSLINE(tm) REPORT #1274 - January 11 2002

Amateur Radio Newsline report number 1274 with a release date of Friday, January 11th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. No more taxicab Q-R-M plaguing a popular ham satellite and lots of FCC enforcement actions highlight this weeks Amateur Radio Newsline report number 1274 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: TAXI TO SATELLITE QRM ENDED

Some good news for satellite operators. Thanks to some hard work by the International Amateur Radio Union, the troublesome F-M signals to ham satellites from Mexican taxi cabs are for the most part gone. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

According to the IARU Monitoring System newsletter it now appears that FM radio transmissions from the taxi drivers in the cities of San Luis and Sonora, Mexico area are no longer getting into the 2-meter uplink of the UOSAT 14 ham satellite.

The issue was raised by many involved in ham radio satellite communications including Ray Soifer, W2RS, of AMSAT North America. The newsletter says that it was Soifers plea to the VHF and Satellite Committee at the 2001 IARU Region 2 Conference in Guatemala City generated extra interest and concern about this and similar problems. This lead to some very productive discussions between the Mexican telecommunications administration and the Federación Mexicana de Radio Experimentadores which is Mexicos national Amateur Radio society.

Credit also is given to Alejandro Pereida, XE2BSS, for his thorough technical analysis of the problem and for his persistence in pursuing the matter from beginning to end. The end being the removal of the interfereing signals from the UOSAT 14 two meter uplink passband.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, not far from the U.S. - Mexico border in Scottsdale Arizona.

--

The newsletter reports that after a lot of correspondence and negotiations on this issue took place over the past eighteen months. It also credits Lorne Libin, XE1V, as being an important mediator during this period. (AMSAT)

**

HAM RADIO AND THE LAW: NEW HAMPSHIRE HAM WINS ANTENNA CASE

Meantime, a lot closer to the ground, the ARRL Letter reports that a New Hampshire ham appears to have won a battle to erect an antenna support structure on his property. But says the League, it remains to be seen, however, whether Jerry Muller, K0TV, of Hudson will be allowed to erect the extensive system of three towers that he'd originally planned.

Unlike many amateur antenna battles, this case did not pit Muller against the town. In December 1998, Muller applied for a permit to erect three 100-foot antenna structures on his property, and the town of Hudson granted the permit. Three of Muller's neighbors appealed the grant of the permit, but the Hudson Zoning Board affirmed the grant. The neighbors then sued the town and won, resulting in the order for Muller to dismantle the towers.

Now, in a 4-0 vote, with one justice abstaining, the Supreme Court of New Hampshire has reversed a lower court ruling but it is not a 100% victory. Writing for the court, New Hampshire Chief Justice David A. Brock concluded that the lower court's order requiring Muller to dismantle his towers violated the limited federal preemption known as PRB-1 as well as New Hampshire's statutory codification of PRB-1. However Brock also agreed with the lower court that Muller's three-tower installation did not qualify as a "customary, incidental and subordinate" accessory use permitted by Hudson's ordinance.

While another amateur in Hudson has a tower at the same height, there are no instances of three such towers on the same property. Nevertheless, Brock said that Muller's installation may be permitted within the framework of PRB-1, if Muller can demonstrate that his three towers are necessary to "reasonably accommodate" his communications needs. (ARRL)

**

THE WAR: 73’S GREEN SAYS US COMMUNICATIONS ILL PREPARED FOR TERROR ATTACKS

73 Magazine El Supremo Wayne Green, W2NSD -- thats his title not ours. El Supremo Green says that the United States is ill prepared to handle communications in the event of another terror attack. Writing in his Never Say Die editorial column, Green says that no matter how the terrorist network hits us, the one thing we are going to need is communications. And this says Green, this is another item that the government has been lax in providing.

Green notes that anytime there is an emergency, the first things to disappear are electric power and telephone service. This includes cellular as well as wired phones. He notes that police, fire, rescue and other services have no way to inter-communicate until ham radio operators arrive on the scene. He says that if ham radio is going to be called on to provide services anywhere and at any time, then we need at least 600,000 licensed hams trained and ready to help, and not just the 100,000 or so that are now really active.

Green’s comments begin on page four of the January issue of 73 Magazine. (73 Magazine)

**

THE WAR: PIRATE HAM OPERATION FROM AFGHANISTAN

You may find this hard to believe, but even with a war going on some joker is pirating the YA5T call-sign and pretending to be on the air from war-torn Afghanistan.

According to Peter Casier, ON6TT, and the Radio Society of Great Britain all the operators who had previously put YA5T on the air have left Afghanistan. Casier tells the RSGB that he expects to travel back to Islamabad on the 20th of January and then to Kabul within the following few days. Until then, any station you work claiming to be on the air from Afghanistan is most probably somewhere else in the world.

We will have more D-X news later on in this weeks newscast. (RSGB)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Condor Connection repeater intertie thanks to KC6SFP and heard throughout the South-Western United States.

(5 Sec Pause Here)

**

FCC: THE VANITY CALL SIGN PROGRAM MAY RESUME SHORTLY

Some god news for hams waiting for vanity call signs. According to an ARRL bulletin, the vanity program which was put on hold since October 14th as the result of the post 9-1-1 Anthrax mail scare may could be in operation shortly.

The vanity gridlock got started after mail received between October 15th and November 1st was diverted from the FCC's Gettysburg, Pennsylvania, office for decontamination in the Washington, DC, area. That mail, believed to contain more than 100 vanity applications filed on paper, has not been returned to Gettysburg.

Current FCC policy says that paper and electronic vanity applications get equal processing priority, so the Commission halted vanity processing altogether until it could resolve the mail snafu.

FCC staffers in Gettysburg have been attempting to work around the roadblock. Using vanity fee payment data from the FCC's fiscal agent, Mellon Bank in Pittsburgh, the FCC's Wireless Telecommunications Bureau in Gettysburg has been contacting applicants directly to have them resubmit their applications. The FCC now is asking applicants whose paper vanity filings may have arrived at Mellon Bank between October 15th and November 1st and who have not been contacted to get in touch with the FCC to find out if they need to forward a copy or facsimile of their original paperwork. The request affects only vanity applicants who filed on paper and not electronic filers.

More information on whats happening in the ham radio vanity call sign program can be found at the ARRL Website. Its in cyberspace at www.arrl.org under W1AW Bulletins for the year 2002.

And late word in. The FCC has begun processing some vanity call signs as this newscast is prepared. (ARRL)

**

ENFORCEMENT: EX-KV4FZ’S NEW LICENSE APPLICATION DESIGNATED FOR HEARING

I’m Bill Pasternak, WA6ITF. The FCC has designated a new ham radio license application filed by Herbert L. Schoenbohm, the ex-KV4FZ, for a public hearing. According to the order released on January 9th, the hearing will determine whether Schoenbohm possesses the requisite character qualifications to be a Commission licensee. Schoenbohm lost a series of appeals during the 1990’s and was ordered off the air last year. He was given twenty days to request that the hearing on his new application be held. If he fails to do so, his application will be dismissed. More on this story, next week. (FCC)

**

ENFORCEMENT: YOU CANT SEND FELONY COMPLAINT AFFIDAVITS TO OTHER HAMS

The FCC wants to hear immediately from any ham who receives notification that a felony complaint has been lodged against him or her by Glen Baxter, K1MAN. This after the government tells the Belgrade Lake Maine operator to stop sending other radio operators so-called Standard Felony Complaint Affidavits. Speaking on his Rain Enforcement Log, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth says that this is not the first time Baxter has been warned:

--

Hollingsworth: “We reiterated a warning issued by the United States Attorney in Maine to a Belgrade Lakes operator who had sent so-called Felony Complaint Affidavits to licensees who had refused to clear the frequency for his broadcasts, or bulletin shows or whatever they are. Complaints about the nature of the transmissions are also under review as well, and we will be looking at those. That went to Glenn Baxter, K1MAN.

The United States Attorney in that case has warned Baxter that if he continues sending the so-called Felony Complaint Affidavits he may be subject to federal criminal charges for misrepresentation and for using the U.S. Mail to make

threats.”
--

If you receive one of these Standard Felony Complaint Affidavits, or notification that one has been filed against you please contact Riley Hollingsworth as soon as you can. He can be reached by e-mail to fccham@fcc.gov. (FCC)

**

ENFORCEMENT: FCC - ALLEGEDLY UNCOORDINATED IN CALIFORNIA

Still with enforcement news, the FCC has notified Dean K. Perrins, N6HWI, of Freemont California that his alleged uncoordinated repeater on 443.725 MHz is causing interference to the coordinated K6TWI system. This is a repeater which operates on the same frequency.

The FCC says that it has information that Perrins has been notified several times
regarding the interference problem but that he has not taken any steps to resolve the problem. Perrins was given twenty days from the date of notification to respond to the FCC. (FCC)

**

ENFORCEMENT: FCC - ALLEGEDLY UNCOORDINATED IN FLORIDA

In still another repeater interference case Joseph Bushel Jr., W2DWR, of Live Oak Florida has been directed by the FCC to respond to a complaint that he is operating a repeater on 146.94 MHz after being denied coordination by the Florida Repeater Council. The FCC says that Bushel’s repeater is causing interference to the coordinated K4EHM system and the government wants him to explain his actions. The FCC also wants W2DWR to respond to an allegation that he was observed transmitting a digital voice recording an that frequency without ever identifying the transmission. (FCC)

**

ENFORCEMENT: FCC- DON’T TALK ON THAT REPEATER

Meanwhile, another Florida ham identified as Thomas Banks, KB4AN of Port Saint Lucie Florida has been notified by the FCC that he is to refrain from using an area repeater. Specifically, the FCC has told Banks that he is not to be heard over the Saint Lucie Repeater Association’s AF4CN machine as requested by the system’s trustee. (FCC)

**

AWARDS: ARRL EDUCATOR AWARDS NOMINATIONS SOON CLOSE

According to the American Radio Relay League, nominations close January 31st for League awards that recognize excellence in teaching. The ARRL Instructor of the Year, Educator of the Year and Professional Instructor of the Year awards will be presented, as well as the ARRL Excellence in Recruiting Award. All winners receive engraved plaques. Complete information and nomination forms are available at www.arrl.org. (ARRL)

**

AWARDS: DARA NOMINATIONS TO CLOSE

The nominating period for the 2002 Dayton Hamvention Awards is quickly coming to an end. The deadline for nominations is also January 31st.

There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence. All amateurs Novice through Extra are eligible.

Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned.

Nominations can be sent to Post Office Box 964, Dayton Ohio 45401. They can also be filed electronically by completing the e-form on the web at www.hamvention.org. (DARA)

(5 sec pause here)

**

AWARDS: NEWSLINE NAMES FOUR AS SUPER SUPPORTERS

The Amateur Radio Newsline has named four hams who will receive its first Super Supporter Award certificates. Don Wilbanks, KC5MFA, has the names:

--

In alphabetic order, the first certificate goes to Roy Blanchard, N5YHS, right here in New Orleans. It was Blanchard whose assistance made it possible for Amateur Radio Newsline to become a federally tax exempt coropration.

The second is earmarked to Dale Cary, WD0AKO for his decade plus work in putting the Amateur Radio Newsline on the Internet and creating the Amateur Radio Newsline website.

Sandy Donahue, W4RU, receives a Super Supporter certificate for his many years of coordinating the arrival of the Newsline Young Ham of the Year Award in Huntsville Alabama, and the recipients registration at Spacecamp. And for the last several years he has also helped to defray the cost of the mini-banquet held to honor the winners.

Last but by no means least, Todd Hitzeroth, N6ZXJ, was recognized for his years of volunteering with Newsline at its Dayton Hamvention booth and engineering the Ham Radio Town Meetings. What makes his contribution unique is that Hitzeroth lives in California and pays his own way to and from Dayton each year.

With congratulations to all four recipients, I’m Don Wilbanks, KC5MFA.

--

Approval for the creation of the Amateur Radio Newsline Super Supporter certificates and naming of the first four recipients took place at the organizations Board of Directors Meeting held in Glendale California on December 30th 2001. A synopsis of the minutes of that meeting will be posted to our website within the next few weeks. (ARNewsline(tm))

**

INTERNATIONAL-ISRAEL: “FIRST” BRINGS IN NEW HAMS

A new group of radio amateurs has emerged in Israel from a rather unexpected place. According to Hagal International, the new Israeli hams are from an all volunteer Search and Rescue group called First.

First members are on call to provide wilderness rescues in areas such as the Israeli desert and canyons. For communications, First members have long carried two-way hand helds operating in point to point simplex mode. The limitations of simplex in rugged terrain means that there are times when they cannot keep in touch.

Recognizing a need for improved communications, First contacted to Israel Amateur Radio Club to ask if the nationwide repeater system could be made available for search and rescue use. And according to veteran ham radio instructor Moshe Inger, 4Z4PF, when First members learned that they would first have to pass an Israeli ham radio exam, they did not flinch one bit. They studied, passed the test and there are now dozen new hams from Eilat in the South to Golan in the North. (Hagal International)

**

INTERNATIONAL-UK: G3YJO BECOMES SIR MARTIN SWEETING

Meantime, over in the United Kingdom word that Martin Sweeting, G3YJO, on being knighted. Sweeting is the Chief Executive of Surrey Satellite Technology and Director of the Surrey Space Centre. He will join Sir Jimmy Young and Sir Ben Kingsley to collect his Knights Bachelor medal from the Royal Palace. Professor Sir Martin Sweeting, F.R.S., was knighted for his services to the U-K in microsatellite engineering. (RSGB)

**

HAM RADIO IN SPACE: QUIET HOURS FOR AO-40

AMSAT reports that AO-40 satellite ground controllers have begun adjusting the spacecraft's attitude as it enters a period of adverse sun angles. The satellite is currently in a long period during which Earth eclipses the sun near perigee. These periods will continue well into next June. As a result, AO-40's operating schedule has been modified to reflect the decreasing attitude longitude. (AMSAT)

**

HAPPY BIRTHDAY: JOHANNES KEPLER AT AGE 470

VK2KGM notes the 470th recorded birthday of Johannes Kepler last December. Kepler was the first astronomer to determine a mathematical relationship existed that could be used to predict the motion of planets. This became the basis for the Keplerian data we use today for satellite orbits. (AMSAT)

**

DX

In DX, word that F2JD is active from the Philippines as DU1 slash G0SHN on 20, 15 and 10 meters SSB and CW. Listen for him from now until June of this year. QSL as directed on the air. (RSGB)

Three Finnish operators will be active from Tonga through the 15th of January, with an emphasis on 160 to 30 meters. They will work CW, SSB and RTTY with three stations using verticals and dipoles. (Modern DX)

**

THAT FINAL ITEM: FANTASTIC VOYAGE REDUX

And finally this week, the world of medical communications research has finally caught up with the lights of Hollywood. This, as the government approves a tiny radio camera-in-a-capsule that patients can swallow. It is a camera that will transmit pictures to give doctors a close-up view of what is inside of you. Amateur Radio Newsline’s Mert Garlick, N6AWE, has more:

--

The new transmitting video pill is made by Given Imaging Ltd. in Israel. It is called the M2A Swallowable Imaging Capsule. It is also exceeding tiny. In fact it is so small that it is easily swallowed by the patient.

Its inventors say that it then painlessly winds its way through the digestive tract and uses wireless technology to transmit full color pictures to a belt pack receiver worn by the patient. That unit also decodes the signal and records the information as the patient goes about his or her daily routine.

A U.S. spokesman for Given Imaging says that doctors who wish to use the video imaging pill will have to buy a specialized $20,000 computer workstation. Each camera capsule costs about $450.

For the Amateur Radio Newsline, I’m Mert Garlick, N6AWE, in Los Angeles.
Roy.

--

The entire system is reminiscent of the science fiction movie "Fantastic Voyage." In that film a submarine and its crew of medical specialists are miniaturized and injected into the bloodstream of a critically injured man to perform an operation to save his life while receiving instructions by two way radio. (Science Today)

Greetings

Im wondering if anyone can point me to a freeware/shareware/etc
program to decode DTMF in a .WAV file

Ive attempted to use WinTone, and found it to skip tones numerous
times.

I've got this sound clip from an Information Society song, where there
is a short clip of touch tones being dialed. Id love to see what
numbers are actually being dialed.

i dont know what you think this NG is about but amateur satelliteradio is not

like sat tv you can communicate on any amateur satellite you wish as long as you have a ham license and the gear to use it
this is NOT a NG about satellite TV or commercial radio that broadcasts via satellite

I have a problem and am hoping that someone has the answer. I just started tinkering with a PK-232 but can't get it to acknowledge the computer. I'm following the startup directions in the manual but the terminal software keeps returning a "Link Error" with no further explanation. An additional issue at least according to the manual is that the four left most LED's should light up and then turn off...they don't.

Has anyone else experienced this problem? Am I doing something wrong? Could I have a dead unit?

I'm a total greenhorn at this stuff so if anyone has any expertise, please lay it on.

Thanks!

Jeff

Bill,

10 meters is the logical choice, 6 meters is a real stretch but has been done. 2 meters is pretty much out of the question, unless your using a 10/2 meter transverter.

I have done several cb's to 10 meters and they work great, even the cb's that were supposed be unable to be modified for extra frequencies.

I have been using a Cobra 148 on PSK31 with great results. Also use one in the mobile and have also converted Lafayette rig to 10 fm.

Ray

Does anyone have the assembly and alignment manuals for the Knight Kit Star Roamer II and the R195 receiver. These solid state receivers are of 1970's vintage. Good clean copies and or clear scans would be appreciated.

I was just handed a pair of the Star Roamer II's and one R-195 all partly built, but the wiring was not completed. Of course no manuals, just the original bags of parts and hardware.

Thanks

Ray Keefe

Hello All;

Just purchased an Icom 746, and I think the radio may have a problem. It doesn't seem to pick up anything on most of the bands, and on 40 and 20 meters it only picks up a few signals, and only with the preamps on. It barely even picks up WWV. I have a good antenna, and have tried the rig on other antennas with similar results. Any advice or suggestions, particularly from people who own this rig?

Thanks.

James

Make sure you are on the correct antenna connector, that would be my first
guess, I cant recall but seemslike there are 2 for hf and one for VHF....check
that......It should be great, they are!!! 73  K5MDM   Murray

I was recently considering buying a VX-5R triband HT and I've gotta tell ya, I am laughing my ass off watching the going prices on Ebay for these things! Right now you can get them NEW from AES or HRO for $255.. just saw one go for $275 on Ebay! Dualbanders are going for prices like this! Why pay that much for a dualbander when you can get a tribander as cheap or cheaper!?!

I just experienced something very strange.. I ordered a VX-5R HT and carry case from HRO and an MFJ triband antenna from AES (HRO didn't carry the antenna I wanted), both ordered almost at the same time and the order numbers for the two are each just one digit off from each other, sequentially. Are these two company's webservers working together?! Why would I get sequential order

numbers from two different companies?

Insufficient data. What are the two numbers?

The exact numbers are irrelivant. They were sequential though.. perhaps they
use the same company to process their orders?

'Pears to me that the numbers could be very relevant. If the numbers were
like 7 and 8 no inference could be drawn. If, on the other hand, the numbers
were like 32,909,231 and 32,909,232, that would be a different matter. Why
not just answer the question? What are the numbers?

Both numbers are 12 digits, in the same format. The first 4 and last 4 are
exactly the same. The last number of the middle 4 numbers is different. For
example:

1234-5678-9012 and 1234-5679-9012

Not a coincidence.

I am assuming that the numbers are lost and there is no way to give them. It
would be interesting to see the actual numbers. They could be some commonly
used code date. Then, on the other hand the difference between the two
companies could be about like Warshawski and J C Whitney. Tis strange.

No, the numbers are relevant. For example, many companies use the current date as part of the order number. If so, then two completely different companies could be having about the same number of orders/day.

How can you tell? Maybe they number from the first of the year, and had
made almost exactly the same number of sales since then.

As I stated, without the actual numbers, there is no way to find out
if it is total coincidence or due to some common numbering scheme.

Ham Radio University 2002/ARRL New York City-Long Island Section Convention

Ham Radio University 2002 for Long Island

North Babylon, New York - On Sunday, January 20, 2002 at 8AM, the doors of the Babylon Town Hall Annex on Phelps Lane will open for the third annual Ham Radio University. Ham Radio University 2002 is a day of education about Amateur Radio.

This year the forums have been expanded and new forums have been added. There will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be "hands on" with many demonstrations.

Come join us at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, and learn about everything from satellite communications, low power operating using radios as small as a tuna tin, how to put up an emergency antenna, the latest information on advanced digital communications, finding and fixing radio frequency interference problems to purchasing your first station equipment or handi-talkie and a special "Ask the Experts" forum. There will also be a Special Event Station W2V set up and operational on HF. There will live SSTV pictures uploaded to the NLI WWW during the event.

HRU 2002 is sponsored by the Great South Bay ARC and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

Join us for a day of fun and education for the whole family!
Admission is open to all - donation is $2 per person.
(complimentary refreshments available)

For more information contact:
Phil Lewis N2MUN, Chairman, n2mun@arrl.net or call 631-226-0698
George Tranos N2GA, ARRL NLI Section Manager, n2ga@arrl.org or
call 631-286-7562

I don't know much about radio. I'm just wondering what frequency range a
subway tunnel maintenance crew would use.
Any help?

Hello Jeff.

The PK-232 lights the left 4 LEDs at the start of initiatuin and then switches to the mode last in use at the end of startup. If the unit is RESET then it will switch to BAUDOT.

Here are some things to try:

1) disconnect all cables except the computer cable and 12V power cable
2) remove JP-1 (Resets the PK-232)
3) Make VERY sure the P/S is supplying 12.5 volts under load (measeured at the fuse)
4) Make very certain the P/S is at least 1.2 amps. It will not run with an 800ma supply
5) Look carefully at all the ICs and make sure they are firmly seated

in the sockets.

If this doesnt work contact me at Timewave and we can look further

I hope not, that would really wreck competitive pricing between companies.
This never would have happened before they dropped the CW requirement to 5
wpm.

AMATEUR RADIO NEWSLINE(tm) REPORT #1275 - January 18 2002

Amateur Radio Newsline report number 1275 with a release date of Friday, January 18th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new ham antenna on the I-S-S and a new microwave record down-under are first on Amateur Radio Newsline report number 1275 coming your way right now!

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ANTENNAS INSTALLED ON THE ISS

An American astronaut and a Russian cosmonaut ventured into space on Monday January 14th to move a construction crane and install a new set of ham radio antennas on the International Space Station. Roy Neal, K6DUE, has the details.

--

THERE IT WAS, ON NASA TELEVISION, TWO WHITE SPACE SUITED CHARACTERS, DWARFED BY THE IMMENSITY OF THE INTERNATIONAL SPACE STATION. FOR THE 32ND TIME ASTRONAUTS AND COSMONAUTS WERE OUTSIDE THE HUGE SPACECRAFT TO ASSEMBLE HARDWARE.

THEIR PRIMARY OBJECTIVE WAS TO MOVE A BIG CARGO CRANE FROM ITS TEMPORARY BERTH ON THE UNITED STATES SIDE OF THE ORBITING OUTPOST TO A PERMANENT LOCATION OUTSIDE THE DOCKING COMPARTMENT OF THE RUSSIAN CONTROL MODULE.

THAT ACCOMPLISHED, THEY WENT ON TO UNFURL A HAM RADIO ANTENNA. ASTRONAUT CARL WALTZ, KC5TIE AND COSMONAUT YURI ONUFRIENKO, RK3DUO, DEPLOYED THE RIBBON OF TAPE THAT SOON WILL BE IN USE ON A HAM RADIO STATION IN THE SERVICE MODULE,. WHERE THE CREWS LIVE AND SLEEP. A SECOND STATION HAS BEEN IN SERVICE FOR SOME TIME INSIDE THE SO CALLED FUNCTIONAL CARGO BLOCK, ANOTHER SECTION OF THE I S S.

FRANK BAUER, KA3HDO, THE CHAIRMAN OF ARISS, THE GROUP THAT IS RESPONSIBLE FOR AMATEUR RADIO ON THE SPACE STATION, CONGRATULATED THE INTERNATIONAL TEAM OF LICENSED HAMS FOR THE SUCCESSFUL CONCLUSION TO MONTHS OF HARD WORK.

ON JANUARY 25th ONUFRIENKO IS SCHEDULED TO GO OUTSIDE AGAIN, WITH FLIGHT ENGINEER DAN BURSCH, KD5PNU, TO INSTALL 3 MORE HAM RADIO ANTENNAS OUTSIDE THE MODULE THEY CALL ZVEZDA, THE CREW COMPARTMENT THAT’S THE SIZE OF A PASSENGER BUS HERE ON EARTH.

HAM RADIO IS GROWING RAPIDLY IN SPACE, ALONG WITH THE INTERNATIONAL STATION ON WHICH IT'S INSTALLED.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

The Expedition 4 crew will remain on board the ISS until May. And according to Frank Bauer, KA3HDO, another important task is to bring the automatic packet system back on line. He says that ground technicians are working with the astronauts and cosmonaut on that project and that task will continue as crew time permits. (ARNewsline from information provided by ARISS, NASA.)

**

HAM RADIO RECORDS: 24 GHZ DOWN-UNDER

A new distance record is set on a band where even commercial interests are only now starting to tread. And its a group of Australian hams who have set it. Q-News Graham Kemp, VK4BB, has the details:

--

A new Queensland distance record on 24.048.1 GHz USB was established morning of Tuesday 08 January over a 72.8 Km path. Location 1 was at Wellington Point, with VK3ZQB and VK4ZHL portable. Location 2 was at Caloundra, with VK3XPD and VK5DK portable operating.

Signals strengths up to 5x5 after initial optimization with typical daytime QSB. The visiting team are continuing with local propagation experiments. The challenges of building and operating microwave amateur radio equipment are wonderfully rewarding in many ways!

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Further experimentation is expected to bring even more record setting contacts in this very microwave ham radio band. (Q-News)

**

RESTRUCTURING: BIG LICENSING SUCCESS IN THE UK

A new slow-code license recently introduced in the United Kingdom is also setting records. This in the area of people flocking to get it. Jeramy Boot, G4NJH, days that the new British Foundation License is on its way to becoming a major success:

--

The Radio Licensing Center reports that, as of the 7th of January, exactly 600 of the new M3 Foundation Licenses had been issued.

In the 'QSO Party' for Foundation Licensees that took place on the 1st of January it is estimated that about 100 M3 stations were active. Many joined the one-minute-past-midnight 80-meter net and many more were heard working DX during the subsequent days.

One person active on the 1st of January was Mike Marsden, M3BQH, who also holds the callsign G8BQH. Mike reports that he worked Alex, UR5EDU, in the Ukraine at two seconds past midnight, using 10 watts on 40 meters. The report was 59+10dB. After a few hours' sleep M3BQH worked 66 stations on the first day, with only two short CQ calls.

"The pile-up queue was never ending, I even managed to work seven other M3s", Mike said.

Jeramy Boot, G4NJH

--

To put this in perspective. The UK has 57,814 hams so 600 is about 1%. Here in the United States we have close to 625,000 licensees. That’s the equivalent of getting 6250 hams signing up for a new license class here in the USA in only a few short days.   (GB2RS)

RADIO REGULATIONS: FCC'S APPROVES DRAFT WRC PROPOSALS

The FCC’s Advisory Committee for the year 2003 World Radiocommunications Conference has approved its preliminary draft proposals. The document has been assigned as D-A-02-101 and deals mainly with satellite and terrestrial allocations in the UHF and microwave bands. Amateur Radio is only briefly mentioned in the area of 890 to 1350 MHz allocations.

The Advisory Committee itself was formed in January of 2001 to assist in the development of United States proposals for WRC 2003. DA-02-101 is based primarily on the committee report. Comments on it are due on it no later than January 28th.

The complete of 55 page text of DA-02-101 is on the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-101A1.txt (FCC)

**

ENFORCEMENT: CLEAN UP THE INTERFERENCE - PLEASE

The FCC has written to an A-M radio station and an electric power provider to help resolve an unusual and long-standing interference situation. One affecting local amateurs in the Cincinnati and Mason Ohio areas. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, brings us up to date:

--

The letter suggests that multiple sources may be involved in this interference case. Also that two that are possibilities are Cinergy Corporation and radio station WLW. Cinergy is the electric company to the affected area and WLW is a Clear Channel Communications owned power-house AM station serving the greater Cincinnati area from a transmitter in Mason.

WLW operates on 700 kHz with 50,000 Watts into a single element diamond shaped half-wave vertical tower. This is only one of two such towers left in the United States, the other belonging to WSM AM in Nashville Tennessee. Both were constructed in the early 1930’s by the now defunct Blaw Knox Construction Corporation.

One of the amateurs affected is Bob Reiff, WA8ULW, of Mason. Reiff told the ARRL Letter that while the noise is most noticeable on 160 meters, it's showing up elsewhere. He says that some local hams suspect it is even causing problems even on a two meter repeater.

In its letters, the Commission says that it recognizes this to be an unusual case. It says that the source of the interference could turn out to be something else unexpected. But the Commission adds that it is turning to the radio station and electric utility company and asking for their help in finding the source of the noise plaguing the Mason ham community. It’s also asking that both cooperate with the technical experts from the American Radio Relay League in solving the problem.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

By the way, More information on this very interesting Blaw Knox diamond tower design and the ones installed at both WLW and WSM is available on-line. Simply take your browser to http://www.wsmonline.com/w_homepage/tower/index.html. Its very interesting reading. (FCC, ARRL, Amateur News Weekly)

**

ENFORCEMENT: UNLICENSED OPERATOR TOLD TO EXPLAIN

A former ham that the FCC says may have been on the air without a license has been asked by the agency to provide an explanation. The person posing the questions is FCC chief ham radio rules enforcer Riley Hollingsworth, K4ZDH.

And in a recent Rain Enforcement log, Hollingsworth outlined the situation:

--

Hollingsworth: “We requested clarifying information from Brian Bailey, ex-KD5PXQ. His license was set aside by the Wireless Bureau on October 19th. We want to know his exact whereabouts on two specific days in September. Bailey has been in touch with us and is deciding weather to provide the information.”

--

According to Hollingsworth, the information that the FCC wants from Bailey relates to allegations of unlicensed operations and malicious interference. (FCC, RAIN)

HELPING HAMS: HAMDIHAMS NEW E-MAIL ADDRESS

This note: The Courage HandiHam System has a new electronic mail address. You can now reach the group at handiham@courage.org. You may also contact its Director Pat Tice directly at wa0tda@arrl.net. (HandiHams)

**

CONVENTIONS: HAMVENTION SAYS BRING YOUR BUS AND LAVE THE PARKING SPOT TO US

Free parking at the HARA Arena for Hamvention? Well, kind of. Its free if you leave your car at home and charter a bus to bring in a pretty large group of people to the event. Amateur News Weekly’s Phil Thomas, W8RMJ has the not so complex details:

--

For Amateurs who charter a bust to make the annual journey to Hamvention, the Dayton Hamvention Committee will reserve a parking place for your chartered bus for the entire three days of Hamvention. The reserved parking will be close to the HARA Arena Complex, allowing not only a place to secure your valued purchases, but also a place to rest those weary feet after walking many, many miles of Hamvention. Space is limited for the new charter bus parking area. Pre registration is required. Availability is on a first come, first served basis.

--

For more information on the new on-site charter bus parking offer or to reserve a space, please contact the Dayton Hamvention office. It’s open normal business hours Eastern Standard Time at are code (937) 276-6930. You can also fax your request toll free at
1-800-491-4267. (Amateur News Weekly)

**

CONFERENCES: SE VHF SOCIETY IN APRIL

Greg Robinson KB4NVD says over the VHF Reflector that the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27 Th. in Oak Ridge, Tennessee. The conference, hosted by the Southeastern VHF Society, promises to be an interesting and exciting event with presentations from accomplished VHF and up amateur radio enthusiasts from several parts of the country. Registration, program details, hotel and travel information can be found in cyberspace at www.svhfs.org. (SE VHF Society)

**

HAM RADIO EVENTS: KIDS DAY A BIG MID-WEST SUCCESS

The first Kids Day operating event for 2002 was a rousing success in many venues. But in one Mid-West city a bit of coverage on a local T-V station helped to make it even better. Again to Amateur News Weekly and reporter Jack Parker, W8ISH:

--

Kids Day at the Indianapolis Chapter of the American Red Cross got a boost when event coordinator Stece Wendt, KB9RDS, made an appearance on a local TV news program. During the two minute segment. Wendt told viewers that all kids and their parents were welcome to share in the Amateur Radio experience, including an introduction to Morse Code, VHF repeaters and HF:

--
Wendt: “And then we turn around tand take them over to the big radios -- the big base station radios where they can talk -- literally -- around the world.”
--

This is the second year the local Red Cross chapter has shown young people how to tune in the world.

Reporting from Indianapolis Indians for Amateur News Weekly, This is Jack Parker, W8ISH.

--

This is just one of many Kids Day success stories. We will have more in future Amateur Radio Newsline reports. (Amateur News Weekly)

ARNEWSLINE(tm) FINANCIAL UPDATE WITH N6TCQ

It’s time for a report on the financial situation here at Amateur Radio Newsline. With it is our Support Fund Administrator and Corporate Treasurer, Andy Jarema, N6TCQ:

--

It is January of 2002. A brand new year for ham radio. And the beginning of another year for us here at the Amateur Radio Newsline. And as we start off the new year, here are the current finances.

Looking in the new corporate checkbook, the balance shows us at about $700 give or take a few bucks. Not very much when you consider that it takes over a thousand dollars a month to produce these weekly 20 minute Q-S-T’s.

Obviously, Amateur Radio Newsline is going to need your help -- and -- need it quickly to keep it from going away and to keep the news of ham radio coming your way.

We have done all that is possible from our side to keep costs under control. But, some fixed expenses like the telephone and long distance calling are a must have. So are electronic mail and world wide web access. There is the cost of the routine maintenance on the tape machines and editing gear. And in a few months the Newsline sponsored Young Ham of the Year Award will be rolling our way. All of this adds up and some costs just keep going up. When you add it all up and average it out, it comes to that $1000 a month figure I just mentioned.

So now is the time when Amateur Radio Newsline has to ask to ask that you help to keep its newscasts coming your way. Your tax deductible contributions can be sent to the Newsline Support Fund, Post Office Box 660937, Arcadia California. The Zipcode is 91066.

Ill be back within the next few weeks with an update on how things are going. For now from the Amateur Radio Newsline support center, I’m Andy Jarema, N6-Tiny-California-Quake.

--

Don’t worry if you missed the address. It will be repeated in a few minutes at the end of this weeks newscast. (ARNewsline(tm) Support Fund)

**

ARNEWSLINE(tm): WE ARE GOING MP3

One other piece of news concerning Amateur Radio Newsline. As of March 1st, we will be dropping Real Audio and going exclusively MP3. Why the change? Well ever since we began posting a downloadable MP3 file at our own FTP site along side the Real Audio file, 9 out of 10 people have chosen the MP3. And with good reason. MP3 simply sounds a lot better than Real Audio to most of you. And by dropping the Real Audio, we can make the MP3 sound even better by encoding at a higher bit rate.

Right now, you can still compare the two formats if you like. Until February 22nd we will continue to post both Real Audio and MP3. Take the time to download both. And don’t worry. Most modern media players including Real Audio, Microsoft Media and Winamp play MP3 so the chances are that you are already equipped to cover of the digital format change. (ARNewsline(tm))

**

SCIENCE AND TECHNOLOGY: THE NOISE OF EARTH

According to Space Daily, researchers have known for three decades that the Earth is a potent radio transmitter, but they were never able to pinpoint where the noise was coming from. Recently, by using data from the four spacecraft of the European Space Agency's Cluster mission, NASA-funded scientists have precisely located the source of the radio noise along the magnetic field lines. The noise originates several thousand miles above bright regions in the Earth's
northern lights. (AMSAT, Space Daily)

**

INTERNATIONAL-CANADA: ARE AGREEMENT IN B.C.

Turning to international news, Radio Amateurs of Canada which sponsors that nation’s Amateur Radio Emergency Service has signed a Letter Of Understanding and the British Columbia Provincial Emergency Radio Communication Service. The letter represents the collaboration between Radio Amateurs of Canada’s British Columbia Section Manager Fred Orsetti VE7IO and Supervisor of Information and Communications Technology for the Provincial Emergency Program Andrew Bryan VE7KSN, to provide a cooperative plan to carry out emergency communication. The letter also further enhances the work of the Canadian ARES program and compliments the Memorandum of Understanding signed May of 1994 between Radio Amateurs of Canada and Red Cross. (RAC)

**

INTERNATIONAL - CANADA: VE1AWA RESIGNS AS MARITIME PROVENCES SM

Due to personal reason Roy MacIntosh, VE1AWA has stepped down from the position of Section Manager for the Maritimes. Tom Caithness, VE1GTC has been appointed acting Section Manager pending outcome of the upcoming election call. (RAC)

**

INTERNATIONAL - UK: AMSAT-UK COLLOQUIUM

The 17th AMSAT-UK Colloquium will be held at Surrey University in Guildford from the 26th to 28th of July this year. AMSAT-UK is now inviting speakers to submit papers about amateur radio space and associated activities for this event and for the Proceedings document. Offers of papers should be submitted as soon as possible and should be sent only to Richard Limebear, G3RWL. His e-mail goes to g3rwl@amsat.org. (AMSAT-UK)

**

HAM RADIO IN SPACE: WEBSITE UPDATE

AMSAT reports that IK8XLD has updated his website with information about satellite operations, EME, the ham radio operation on the International Space Station, ATV and homebrew equipment. You can visit Rocco’s website at www.qsl.net/ik8xld. (ANS)

**

DX

In DX, DJ4KW and DK9GG are active from Belize as V31YN and V31GW respectively until about the 2nd of February. Activity is on CW, RTTY and PSK 31. (GB2RS)

And KE1F will be active on 10 to 160 meters CW, SSB and perhaps RTTY as ZF2LM from Grand Cayman Island from the 14th to 30th of January. (GB2RS)

Also R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28 MHz with 100 watts to an R6000 vertical. For all three, QSL as directed on the air. (OPDX)

Last but by no means least, word that JX7DFA, is on a job assignment to Jan Mayen. He is operating as LA7DFA. QSL via his home call. He will reply when he returns home in the Spring. (Modern DX)

**

THAT FINAL ITEM: A CALL FOR ARDF HUNTERS FOR THE WORLD GAMES

And finally this week, 2002 may be the biggest year yet for fans of hidden transmitter hunts, especially the ones that are all on foot. Amateur Radio Newsline’s Joe Moell K0OV helps coordinate happenings like these and has news of two major events.
--

Every two years, hams from around the world gather to see who is best at on-foot hidden transmitter hunting, also called foxtailing, radio-orienteering and ARDF. There are separate events on eighty meters and two meters, each with five transmitters scattered in a forest that can encompass 1000 acres or more.

Competitors are divided into five categories for males and four categories for females. Each country may have up to three persons per category on its team.

Back in Y2K, the championships were in China, with a dozen stateside hams among the competitors from 26 countries. This year, the excitement moves to Slovakia and takes place from September 2 through 7. Once again, ARDF Team USA will be there.

Would you like to be on that team? If so, contact me right away, because USA must submit its Letter of Intent to the Slovakian hosts by the end of January.

Of course you'll need lots of practice beforehand, and you can get plenty by attending USA's own national ARDF championships, which will be April 19-21 in Pine Mountain, Georgia, near Atlanta.

Find out about both championships -- Slovakia and Pine Mountain -- by visiting my Web site: www.homingin.com. Homingin is one word. Then apply for the Team USA roster at my e-mail address on that site, or by postal mail to my callbook address.

Maybe you'll bring home a medal this year. From southern California, where this year's local radio-orienteering training sessions will begin soon, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

In case you missed it, Joe’s website is www.homingin.com. “homeingin” is one word. (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating season for the Dayton Hamvention Radio Amateur of the Year, Technical Achievement and Special Achievement Awards closes January 31st. Nominations should be sent to Post Office Box 964 Dayton Ohio 45401. They can also be filed using the e-form at the Hamvention website. Its at www.hamvention.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm ______________ saying welcome to the year 2002, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Ham Radio University 2002/ARRL New York City-Long Island Section Convention

North Babylon, New York - On Sunday, January 20, 2002 at 8AM, the doors of the Babylon Town Hall Annex on Phelps Lane will open for the third annual Ham Radio University. Ham Radio University 2002 is a day of education about Amateur Radio.

This year the forums have been expanded and new forums have been added. There will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be "hands on" with many demonstrations.

Come join us at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, and learn about everything from satellite communications, low power operating using radios as small as a tuna tin, how to put up an emergency antenna, the latest information on advanced digital communications, finding and fixing radio frequency interference problems to purchasing your first station equipment or handi-talkie and a special "Ask the Experts" forum. There will also be a Special Event Station W2V set up and operational on HF. There will live SSTV pictures uploaded to the NLI WWW during the event.

TALK-IN W2GSB/r 146.685   -600   110.9 PL

HRU 2002 is sponsored by the Great South Bay ARC and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

Join us for a day of fun and education for the whole family!
Admission is open to all - donation is $2 per person.
(complimentary refreshments available)

I had an 756. I had a 756PRO and I should have a 756PRO II on Monday.\

First of, I work CW about 99%. The difference between the 756 and 756PRO is significant. With the prices of the PROs low right now, and you know that any used ones aren't more than 1 1/2 yrs old, I would get a PRO. The DSP filters are great and you can read RTTY right on the LCD display. The spectrum display (on all 756s) is one of those "I'll never do without" features. Once you work a contest, or search a dead band for a qsl, the spectrum display is a must have.

The first two 756s worked great for me, and I am far from having either and ideal location or antenna.
73,
ak9i

HI,
Is there an internet source to download ft-1000 service manual (i.e. .pdf .doc
ecc.ecc.)  ????
Thank-you very much !

73 de IK3UMT

Visit http://www.ir3ip.net  tnx !

Dan -

This would be an excellent question for rec.radio.scanner. Different
municipalities use different frequencies, also, so you'd have to supply
the city that you are in, too.

Dave

You know, just because the numbers are sequential and identical in format does necessarily not PROVE the two companies are somehow "in cahoots" with each other.

What is more likely the case, is that either:

a) The two companies use identical billing software packages, and our friend here just happened to be the lucky recipient of sequentially matching billing numbers.

OR (even more likely)

b) That the two companies, as small as they are, cannot afford their own order fulfillment systems, and have both contracted to the same warehouse/order fulfillment firm for services like billing, or packing/shipping.

I have a Macintosh Laptop (G3 proc) and a Sony ICF-2010 Shortwave receiver.
My question is this: Can I decode WeatherFax transmissions using only this
equipment and what is the best/cheapest (tradeoff) software for me to
accomplish this with?

I figured just using the line out port on the Sony to my microphone jack on
the Apple would work but I have not been able to even fairly strong CW
signals with Multimode Lite.

Any guidance would be greatly appreciated. TIA

-Chris

At what frequency would the typical subway be a waveguide, I wonder?

Would that be the 'optimum'?

Jim

Is the program giving an indication of an input signal actually being there? IE: tuning scope, etc. I'm not sure what is out there for mac's. There are many programs out there for DOS and windows. Is there any way you can use a dos emulator program? I would think the software you have should work if it's for mac. You may having a timing problem, or you may have a lot of local noise that is confusing the program in copying cw. Or you may have a problem with the modem connection and have no signal to the program. I don't copy many wefaxes now with the internet, but I used to copy them every day a few years ago. My favorite software was pc-hf fax for DOS. That was used with a simple op-amp modem/converter. That gave me the highest quality grey scale pix of all the softwares I tried. The programs for multimode digital stuff had the worst quality in general unless they used a simple op-amp converter.I downloaded a program a while back called wxsat that will work, but it's for windows soundcard. I'm now all windows soundcard based as far as all my radio softwares. Well, actually one of my DSP programs is DOS, but I still run it in windows as a dos box. You might consider getting a beater computer just for radio stuff that you can run windows on. There is much more software out there if you do. I use hamscope for psk31/cw etc. I've been using mmsstv lately for sstv, with the wxsat program for any wefax I run into. It makes it easy because all run off the same device. No juggling of cables, etc. I also copy other stuff like airline acars, selcal, etc. It's almost endless what you can do. I have outboard DSP programs that blow the factory radio stuff away unless it's high end. My 706's built in DSP is useless in comparison. Also have spectrum analysers and other toys to wink and blink. I can record stuff off the air, and play it back to you with very good quality, and also have a logging program that has a clock/timer program built into it. I can set it to ID every ten minutes, and play any type wav file I set it to. I could set it up to ID in my own voice every ten minutes if I wanted to. I usually just have it chime using a wav of a southwest airlines seatbelt warning bell. :) I also get good audio out due to listening on good speakers

from the sound card instead of the dinky radio audio. Makes my 706
sound more like 756 as far as audio, and I have the outboard DSP power
to match. I use a 706g as the puter radio as it will go nearly
anywhere as far as freq/modes. I can also control the radio, and
rewrite memory banks etc if I needed to. MK

You did the right thing Bob. The 706 is a nice radio.
If you want to cover the HF bands consider a motorized center loaded
vertical, like the Stealth II series from http://www.hiqantennas.com

For 2 meter any 1/4 or 5/8 vertical will do.
Check my website for the mobile HF set-up, different pictures:
http://home.planet.nl/~pa3duv

I am looking For Schematic or Manual for a - 70 CM  PD-ATV-50 PAULDON
 or, and old broshures.
 and any info about the bricks, Amps   -M67728   or  M67705M
 Where can they be purcased how much they cost.. I have digital
 pic if you need more info

  Thank you

 Tom KF6RTY  email- mrthoms7@pacbell.net

Pedro,
    Does this happen on all bands or only some? Lift filter board and
examine relay solder connections carefully. Re-solder any that look suspect.
This is fairly common on the 140, especially later production.
        Greg K3EWZ

Why not just use your word processing program, typing in bold type the call sign and separating each contact with a horizontal line? Since I mainly rag chew or handle phone patch traffic, I found that to be a simple solution. The back up procedure is familiar, and you always have plenty of room for comments and whatever info you want to put for each contact. To locate info, you can simply use the search option on the edit menu as you would normally with your word processing program. Simple enough if you're not into paper chasing or contesting.

"Slack-jawed wonder of wonders, I am getting gut-punched by Lelnads on-target observations about my freebanding hobby and this through no amount of effort on his part. As you may know, I challenged Lelnad and his wastrel band of mongrels to a fair debate in the cb room to which he cleverly outed me as a sometimes scofflaw, so here I may lay it all out for interested parties. Many years ago I decided that I was special and the normal rules of society did not apply to me. Course here in the south y'all yankees don't quite understand our ways and sometimes what appears to be a crime is only a marriage of convenience between the victim and the criminal. Me, I abide by neither category, but I would lean more toward Robin Hoods side of the fence if truth be known. Yes I have done my share of drugs, no I have not had sex with my own gender yet, yes I operate cb radios outside the normal channels, yes I have disobeyed and stolen from "the man" in my time. All this might be shocking to some but I maintain it is a lack of comprehension skills that disenables the truth to be realized in the lower form of animals that is to say those that do not agree with me or are not sufficiently evolved to see the truth of the matter which is that governments are made to be defied and the defiers are naturally superior, as I am. So Lelnad, keep trying, keep slurping your sputum and licking your fluid pouch because try as you may I am your better"

"Slack-jawed wonder of wonders, I am getting gut-punched by Lelnads on-target observations about my freebanding hobby and this through no amount of effort on his part. As you may know, I challenged Lelnad and his wastrel band of mongrels to a fair debate in the cb room to which he cleverly outed me as a sometimes scofflaw, so here I may lay it all out for interested parties. Many years ago I decided that I was special and the normal rules of society did not apply to me. Course here in the south y'all yankees don't quite understand our ways and sometimes what appears to be a crime is only a marriage of convenience between the victim and the criminal. Me, I abide by neither category, but I would lean more toward Robin Hoods side of the fence if truth be known. Yes I have done my share of drugs, no I have not had sex with my own gender yet, yes I operate cb radios outside the normal channels, yes I have disobeyed and stolen from "the man" in my time. All this might be shocking to some but I maintain it is a lack of comprehension skills that disenables the truth to be realized in the lower form of animals that is to say those that do not agree with me or are not sufficiently evolved to see the truth of the matter which is that governments are made to be defied and the defiers are naturally superior, as I am. "You think you can forge me in both hammie and cb room, Lelnad, but I am one step ahead of your pathetic distortions and lies. I have created this free newsserver account in order to give you something to think about. You see I could if I were so inclined use this account to forge YOU. Note that I said COULD, dear Lelnad, not DID, for I admit nothing without a quick backshuffling and the famous razzle-dazzle two step for which I am famous for. You may think you have cornered me with proof and substantiation, but all I need do is unleash a welter of words to bollix you and you come undone. Dogie was so beaten by my talent that he withdrew, tail between legs, to the darker reaches of the kennel. The one time he thought he was clever enough to send a tremor through my world was the lucky break that enabled him to post his disgusting mens undergarment for my receipt. I assure you it was the kennel club that did this and no one else for he as much as admitted it by his words scrawled on the garment itself. I will never reveal these words but know that I have the aformentioned lingerie displayed where I can see it daily as both a trophy and a reminder that I can send authorities to lock him up and throw away the key should I deign to. Now you Lelnad, observe this as a lesson if you please. There will be no more caterwauling and piffling and prodding as adjuncts to my posts. If you disagree with my proprietary opinions I ask you to take it to email and not involve the group in your anger-infused jealousy"

I just noticed that the Amateur Radio newsgroups have contributed more to my kill file than all the other newsgroups I read put together. I just can't believe how many lame-assed jerks are attracted to these groups. Incredible!

Yes, I do. That's what I meant. I just noticed how long my "ignore" list for these newsgroups had become. I'm ignoring more people in these three newsgroups than in all the other newsgroups I read combined. I was amazed at the signal to noise ratio around here.

Subject: Email reflector for VHF+ related topics, all modes...
Message-ID: <20011210005721.14594.00001027@mb-fb.aol.com>
Xref: archiver1.google.com rec.radio.amateur:2737

Hello everyone.. I have created an email reflector for discussing VHF and above
(50 mhz and above), all modes, regardless of interests or location in the
world. I know there are many reflectors that deal with these topics to some
degree, but a lot of them don't seem too successful.

My reflector is on Yahoo! groups and even has a file section, bookmarks,
calendar and more. Please check it out at
http://groups.yahoo.com/group/vhfallmode or if you want to join via email, send
a message to: vhfallmode-subscribe@yahoogroups.com and you will be added! Hope
to see you there!

See Carl?? That persons response ("You don't have the ability to ignore topics and/or persons on your own?") is very typical around here. I guess we are not as smart as the rest of them...or as considerate. Some people have the need have to rip or put someone down to make them feel better.

The Astron RS35 (or RS35M with meters) will work fine, which puts out 25 continuous amps. I believe that rig calls for 20 amps continuous.

I am relatively new to ametuer radio and I was wondering if anyone had
any good cubical quad antenna designs for fox hunting.  I am looking
for something that is somple and easy to build.

Thanks,
Bill

I bought the MFJ4125 for less than $100 at Dayton2000 (at the same time I bought my IC706Mk2G). It continues to work flawlessly and shows barely a few mV of noise on my o'scope. It's rated at 25A surge and 22A continuous. It also runs very cool, from a temperature standpoint. I recommend it very highly from a price/performance standpoint.

tony, W9MT

I have a MD-1C8 desk mic which came with a FT-736R I just received and I have a question about the "Tone Select" switch on the bottom of the base. What does it do? One person (who doesn't own one) told me he thought it worked like an equalizer to cut high or low voice peaks - someone else (who also doesn't own one) told me he thought it was an impedance matching network.

The guy I got the radio from didn't know how to pack - the C8 base got crushed a bit ... the tone switch was destroyed. From the looks of it - switch position 1 and 2 do something and position 3 might be a "not connected" state. I can solder in a couple of jumpers if I can find out what the switch is for and what the positions are for.

Thanks!

Michael - KD5BBC

What do I use? A car battery or deep cycle, and an auto charger. It has it's advantages. My radio doesn't go off when the lights do. Also, I'm totally portable. Or at least until the battery runs down. I can recharge off my car when out in the boonies. MK

Hi there

Does anyone know of a website where I may download an operator's manual
for the Icom IC-RM3 remote controller? I have recently acquired one but
unfortunately the unit came sans manual :-((

Thanks in advance.

I have seen those walkie talkies that the Afganistan
fighters are using and am wondering what type and
what band that they are running on?
I understand that some central and south american rebels
often used amateur radio hand helds in the field on ham
frequencies.
Does anyone in the NG have a clue?

Thanx all for the help but bear with me here... I'm not too bright and new
to this stuff.

Why do all my other battery operated gadgets, for instance Yupi MVT7100
scanner, only need a simple (translate as inexpensive) "brick" type power

supply?

Assuming I do need something like suggested. Linear vs Switching? Why are
some units 20 pounds (Alinco DM-340MVT) and others only 4 (MFJ 4225MV)? In
short, I guess I'm asking, What other "features" should I be looking for in
a power supply?

Thanx again

Note: Designers please forgive the lack of some detail given here. My intent is to make this a simple explanation.

Your small devices don't use much power so that is the reason for the simple supplies. When you are talking output voltages of around 14v and currents to 20 amps you are talking big power and "expensive" supplies. There are basically two ways of supplying this power: via linear method or switching means.

The switcher is very efficient at transforming line power into useful output power to your rig so it wastes little power in the form of heat. This makes the supply light in weight and by its design (which I won't bore you with the details) it can use light weight transformers and inductors in its design making it ideal if you want small and light. However, nothing in life comes without a price and the price you pay with switchers is high frequency noise. This noise comes down the supply lines and radiates out of the supply and into the air is unpredictable amounts. The supply designer can try his best to knock this hash down, but it may still give the user grief at some frequencies. There are some other factors involved with switchers, but lets not get complicated in this forum.

The linear supply is very inefficient and wastes alot of power in the form of heat and is, thus heavier than its switching competitor. The linear supply also must contain a transformer operating at the line frequency of 60Hz to transform the line voltage down to a reasonable level for use in the regulator portion of the supply. This means a large, heavy transformer full of copper wire and magnetic steel core material. This adds up to heavy and expensive. The redeeming grace of the linear is that it produces clean power with radiated and conducted noise too low to comment on.

In picking a supply you have to ask yourself what is most important to you. If price is important and you can live with some noise, then the switcher should be your choice. If you want purity and have the extra bucks, then buy the linear. This is like trying to buy stereo equipment. :-) Hope this helps.

Selling MFJ-9406 6m SSB radio. Includes original microphone and Radio Shack
universal DC power adapter (Model 273-1815). This radio is in very good shape
and works flawlessly. I've been using it for the past month or so, making

```
contacts around the country, and have decided to buy an RCI-5054 6m all mode.

Asking $175 plus shipping, firm. Email your reply!

Visit http://www.mfjenterprises.com/products.php?prodid=MFJ-9406X for complete
details.

There have been many questions to the group like this in the past
several months. The answer are pretty much the same:

1. Perhaps, but why would you want to?
2. Perhaps, but it is illegal and the unit would not be type
accepted.
3. Perhaps, but you would have to pay Motorola (or whomever)
$50000000 to find out how.

Hi there everybody.

I'm a new ham in Ontario Canada. I was wondering if anybody out there can recommend a good site to order QSL cards from. I only need a quantity of about 250 and prefer at least two or three colors. Does anybody have any recommendations of a site you've had good luck with? I need a Canadian company because exchange rates with the U.S. $$ is ridiculous right now.

Thanks in advance!

Nick

Nick,
I saw a few ads in the back of QST a couple of months ago. I think that
there's a company in Don Mills. You c an also check http://www.rac.ca

The ICOM IC-78 radio seems very popular by south american rebel forces
like FARC etc.. they sell those IC-78s by the boat load and clone all
of them (the IC-78s have a connection to clone the frequencies) anyhow
I know they have also have been spotted in afghanistan and some
friquencies like 29.915,29.905 and 29.895 were programmed into them.
they are popular because the can be programmed and the channels are
labeled and its a easy radio to operate and does not require training.
anyhow the IC-78 looks exactly like the IC-718

AMATEUR RADIO NEWSLINE(tm) REPORT #1269 - DEC 7, 2001

Amateur Radio Newsline report number 1269 with a release date of Friday, December 7, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC says no to a Winter Olympics special call sign and a new Extra class exam starts next summer. Learn what’s in it on Amateur Radio Newsline report number 1269 coming your way right now.

(Billboard Cart Here)

**

THE 2002 WINTER OLYMPICS: FCC SAYS NO TO SPECIAL CALL SIGN

An idea for a special events call sign to celebrate the 2002 Winter Olympics has drawn a negative response from the FCC. Tom Schaefer, NY4I, of Sandy, Utah, had requested that the agency allow amateurs Utah hams to substitute the number 2002 or 02 for the 7 in their callsign. This, for the time period preceding and up to though the 2002 Winter Olympics in Salt Lake City. But after mulling it over for a few months the Schaefer says the agency responded with a definite no:

--
Schaefer Here:
In-Q: I wrote a letter...
Out-Q:...as a different prefix.

The letter to Schaefer was signed by D'wana R. Terry. Terry is Chief of the Public Safety and Private Wireless Division of the Wireless Telecommunications Bureau. Among the reasons Terry stated in refusing the special call sign request was that the block of special event callsigns requested did not fall into the commission's special event callsign format. Also, that the request was inconsistent with International Radio Regulations. Schaefer says that he is disappointed at the FCC decision to deny, and also a bit surprised:

--
Schaefer Here
In-Q: The letter I...
Out-Q:...unable to do that.

Does this mean that there will be no ham radio involvement in the 2002 Winter Olympic Games? Not by a long shot. According to Schaefer members of the local ARES groups will be assisting in providing communications for the event. And there’s a good chance that someone will pick up the ball and get some sort of special call sign using the established call sign administrator program.

By the way, you can hear more with Tom Schaefer NY4I about ham radio at the Winter Olympics on this weeks RAIN Report. Its on the web in Real Audio and Windows Media at www.rainreport.com and by telephone at 847-827-7246. That’s 847-827-RAIN. (ARNewsline(tm))

**

THE ARCTIC WINTER GAMES

Another event called the Arctic Winter Games are also in their planning stages. In this case, ham radio is an important part of the event. Q-New Graham Kemp, VK4BB, tells us the who, the what and the where:

--
Greenland and the call-sign OX1AWG is on the air from Nuuk Greenland as a participant of the Arctic Winter Games going to be held in Iqaluit Nunavit and Nuuk Greenland 17th - 23rd of March 2002.

OX3HX, Rene tells us any Hams bringing a valid License original will be welcome to use the local club station OX3NUK for a small fee. If you would like to have your own OX3-call, ship a copy of the license but they need to have the papers 3 weeks in advance. Hams who like to operate OX/Home call or OX1AWG are welcome too, and have only to show up with original valid license.

For the Amateur Radio Newsline, Im Graham Kemp, VK4BB, of Q-News Australia.
--

For those planning to visit Greenland for the games, Rene Witkowsky, OX3HX will be available at one of the many Help Booths around the city. (Q-News)

**

DX RECORD: 73 KHZ DISTANCE RECORD INCREASED

Yet another new low frequency record has been achieved on the 73 kHz band. Jeramy Boot, G4NJH, has more:

--
“On the 21st of November, just before midnight UTC, W1TAG received extremely slow CW from G3AQC. This was the first time that a complete callsign had been copied, though partial calls were identified the previous night.

The opening lasted around two hours and was the culmination of several weeks of testing. At a distance of 5291 kilometers, G3AQC smashed his own record of 4408 kilometers when his 73kHz transmissions were received by VE1ZJ last June. He was running 200 milliwatts ERP.

The transmission was in Differential Frequency CW, where the dots and dashes are the same length but on slightly different frequencies, and with no space between them.

Jeramy Boot, G4NJH”
--

The Differential Frequency C-W communications system used for this contact holds the promise of extending this record even further. (GB2RS)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on great bulletin stations around the world this week honoring the Antelope Valley Amateur Radio Club Wednesday Night Net serving Lancaster California.

(5 sec pause here)

**

HAM RADIO IN SPACE: EXPEDITION 4 HEADS TO THE ISS

Amateur Radio is keeping an eye one space this week. On the International Space Station to be more exact, as we witness a changing if the guard. The third group of Astronauts and Cosmonauts headed by Frank Culbertson, is getting ready to come home. They'll be back on Earth December 16th, after being in orbit since last August.

Expedition 4, Yuri Orufrienko, Dan Bursch and Carl Walz will take over and be up there until next May. Onufrienko once operated from the Mir Space Station; Bursch is KD5PNU and Walz is KC5TIE. So hams can look forward to contacts with them.

Amateur Radio on the International Space Station; ARISS; will continue on the air with two meter voice and packet. Voice contacts with schools all over the world have been well served and those exciting contacts will continue at a rate of one or two a week once the new crew settles in.

In addition to operating ham gear, the new crew has also carried new Amateur Radio antennas to the station. They were designed and built in Italy to Russian specifications, then space-qualified and shipped to the United States.

The Astronauts plan at least eight space walks, two of which will be used to install those antennas outside the crew quarters. They should provide a wide range of frequencies and vastly improved coverage of the ham bands for the ARISS station.

The space station call, while flying over the United States is NA1SS. The 2 meter downlink frequency is 145.80 MHz. Look for the new crew on the air from orbit in the near future. ARNewsline(tm))

**

HAM RADIO TESTING IN THE USA: NEW EXTRA CLASS EXAM QUESTION POOL RELEASED

If you are planning to upgrade to Extra class, now might be the time to do it. This is because a new and somewhat more difficult Extra Class exam will go into effect next summer. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--
The National Conference of Volunteer Examiner Coordinators Question Pool Committee has released a revised and expanded set of Element 4 Amateur Extra questions. Use of these questions begins next summer and replace the current Extra class question pool released back on April 15, 2000. That's the day Amateur Radio ''restructuring'' became effective.

The new Element 4 pool expands the number of questions by more than 20 percent.

The new test pool has 806 questions as opposed to 665 in the current Extra class pool. It also contains more technical material. In fact, more than half of the questions cover electrical principles, circuits, signals and emissions.

The 50 questions in an Extra class examination are drawn from the question pool. FCC rules say that an applicant must correctly answer at least 37 questions of the 50 to receive a passing grade.

The new Extra class question pool becomes effective July 1, 2002, and must be used to generate all Extra class written examinations administered on or after that date. The questions are available on the ARRL Web site and will remain valid through June 30, 2005.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.
--

The Question Pool Committee now will turn its attention to developing an outline for the Technician class Element 2 question pool. A draft version is scheduled for public release and
comment next spring. The ARRL website address is http://www.arrl.org/arrlvec/pools.html to find the Question Pool. (ARRL Bulletin, NCVEC)

**

HAM RADIO TESTING IN THE U-K: UPGRADING MORSE TESTS UNDERWAY

Meantime overseas, the United Kingdom is in the process of administering a lot of slow speed Morse code exams. This, following the an announcement by that nations telecommunications agency that U-K Full and Intermediate Class B license-holders can operate on the High Frequency bands under the new Foundation license by simply passing a code test.

Called a Morse Assessment exam, the Radio Society of Great Britain is arranging for sessions to be held nation-wide. The RSGB hopes that at least two sessions per region will take place between now and the end of December.

The RSGB says that these tests are open to both members and non-members of the society. So far twelve sites have been approved for training and testing of the new U-K Foundation License. (GB2RS)

**

ENFORCEMENT: AMATEUR RADIO ROAD RAGE MUST STOP

The FCC's chief ham radio rules enforcer has told those attending the Ft. Wayne Indiana Hamfest that the time for on the air arguments has come to an end. Riley Hollingsworth, the FCC's Special Counsel for Amateur Radio enforcement told the forum that Amateur Radio road rage must stop now and that the bickering on our frequencies can do nothing but hurt Amateur Radio in the long run.

Hollingsworth also says its time for more hams to get involved in public service. Jack Parker, W8ISH, of Amateur News Weekly, has that part of the story:

--
“Hollingsworth says that it is now time for hams to use frequencies responsibly. He adds that now, more than ever, is the best time for all Amateur Radio groups to seek out and establish working relationships with local emergency response agencies.

Since September 11th, Amateur Radio and its potential has moved into a prominent position on the national front. But he stresses that we must move quickly at a local level to establish our place in the overall emergency response plan.

Reporting from the Ft. Wayne Hamfest, for amateur News Weekly, I’m Jack Parker, W8ISH.”
--

Hollingsworth’s views are echoed by many who are already involved in organizing ham radio emergency communications on a local level. They say you can never have to many well trained volunteers. (Amateur News Weekly)

**

SPECTRUM USE: FCC OPENS UP MORE SPECTRUM TO COMMERCIAL USERS

The government has moved to eliminate a cap on how much spectrum any one wireless company can own in a given market. The decision opens the way for mergers between major carriers and allows them to provide more mobile services such as high-speed Internet access.

The Federal Communications Commission had previously limited the amount of spectrum that an operator could own in a particular geographic area, in an effort to prevent a single giant company from squelching competition in that market. But in a recent 3 to 1 vote, the agency decided to immediately raise the amount of bandspace a company can own from 45 MHz to 55 MHz. This is an increase of more than 20 percent. The FCC plans to completely eliminate the limit in January 2003. (FCC)

**

HAMVENTION 2002: TIME TO NOMINATE REMINDER

Another reminder that the Dayton Amateur Radio Association has opened the nominating period for the 2002 Dayton Hamvention Awards. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations can be submitted by US Mail to Post Office Box 964, Dayton Ohio

45401 or by completing the convenient e-form on the web at www.hamvention.org. (DARA)

**

NEW HAM TECHNOLOGY: THE ELECRAFT RIG CONCEPT DESIGN CONTEST

Want to design the ham rig of the future and maybe win a prize? Well, Elecraft says that it will be giving three of its new EC1 project enclosures to those who submit the most interesting suggested designs concepts.

--

Eric Swartz WA6HQQ: “There’s quite a strong building and homebrewing community inside of the QRP’ers -- the low power operators -- these days. In fact, that is how we got our start.

We have broadened our audience past that and have pulled a lot of hams from the mainstream higher power groups to it also, but those guys (the QRP operators - ed.) build an awful lot of stuff. We are continually seeing folks talking about new project ideas and new things to design. It is quite a fertile group of people so I think we are just kind of servicing that need.”

--

Elecraft says its taking this rather unusual step to away to help stimulate the creative process within the ham radio community. According to Elecraft’s Wayne Burdick, N6KR and Eric Swartz, WA6HHQ, design concepts submitted can be for virtually any ham-related application, but they must be compatible with the Elecraft EC1 enclosure. The EC1 is the same size and color as the K1 transceiver. No schematics are required and designers are under no obligation or expectation to actually build the proposed projects. More information on this unique design contest along with all the rules is on the web at www.elecraft.com. (Elecraft)

**

ELECTRONIC BUSINESS: AILING POLOROID FILES CHAPTER 11

Polaroid has been known to generations of consumers for its instant cameras and film, and more recently as a supplier of digital imaging products. Now Poloroid has filed for Chapter 11 bankruptcy protection.

According to news reports, the company was unable to keep up with the new digital technologies of the photography world. It also has struggled with nearly $1 billion in debt. (Published reports)

**

BREAK 2

News never goes home for the holidays and neither do we. We are the amateur Radio Newsline with links to the world at our only official website - www.arnewsline.org.

**

EMERGING TECHNOLOGY: BRAIN DISEASE SUPERCOMPUTER

The University of California at San Diego will coordinate a consortium of interests banding together to build the first nationwide computer network for studying diseases of the brain. The network will enable researchers to share information on neurological diseases such as multiple sclerosis, schizophrenia, Alzheimer's disease and Parkinson's disease. The National Center for Research Resources, part of the National Institutes of Health, awarded the consortium more than $20 million for the project, which will enable researchers to share brain images via a high-speed network. (UCSD release)

**

HAM RADIO IN SPACE: FREE UPDATED TRACKING SOFTWARE

An updated version of the PREDICT satellite tracking and orbital prediction program is now available. This latest updated corrects some errors that have caused instability under certain conditions in the past. The program's documentation has also been updated, and new versions in Portable Document File and HTML have been added. PREDICT is free software.

The latest DOS version may be downloaded from ftp://ftp.amsat.org/amsat/software/PC/tracking/predict2.zip >. Further information on PREDICT software is available at http://www.qsl.net/kd2bd/predict.html.

Also, new Linux version is currently being prepared for release as well. (KD2BD)

**

INTERNATIONAL - SOUTH AFRICA: NO HT’S IN THIS CAR

Radio Amateurs in South Africa can no longer use a hand held radio in a vehicle unless its attached to a hands free operating system. This is the result of a new law that says that no person will drive a vehicle on a public road while holding a cellular telephone or any other communications device in one or both hands.

To operate mobile, hams and non hams alike now must use a radio permanently mounted in the vehicle and adapted to hands free operation. The law permits mobile radio operators to use such devices as a permanently mounted microphone and speaker or other specialized gear to comply. (SARL, Q-News)

**

INTERNATIONAL-UK: MARCONI 100TH ANNIVERSARY

The 100th anniversary of the reception of the first trans-Atlantic radio signal by Guilermo Marconi at Signal Hill in St. John's, Newfoundland, takes place on Wednesday the December 12th. In celebration, a number of United Kingdom special event stations will be active to commemorate the event.

Most of the operations will take place on the 12th of December itself. Even Great Britain’s Radiocommunications Agency is getting into the act. It will be operating GB100WT from its laboratory site at Whyteleafe, Surrey, during part of December including, they hope, the full 24 hours of the 12th of December. The Radiocommunications Agency expects to be operational on the High Frequency bands as well as 2 meters and 70 centimeters. The station will be operated by Radiocommunications Agency staff in addition to members of local radio clubs and will welcome QSOs with stations worldwide. (RSGB)

**

RADIOSPORTS: WRTC-2002 REMINDER AND UPDATE

A reminder that the next World Team Radiosport Championship will take place next July in Finland. The games will be hosted by the Finnish Amateur Radio Society and the Contest Club of Finland. WRTC brings together over fifty two man teams made up of the best contest operators from around the world. The actual on-the-air competition pits two man teams operating from a common geographic area using identical equipment, power and antennas.

To get a good idea of what goes on at the World Radiosport Team Championship games, film-maker Dave Bell has produced a half hour documentary video titled “The Ham Radio Olympics.” Its priced at only $19.95 and is available on video CD or VHS tape from the American Radio Relay League. More information is on the web at www.arrl.org. (WRTC, ARRL, W6AQ)

**

DX

In D-X, word that wore torn Afghanistan is back on the air following the ouster of Taliban forces from most of that nation. Q-News Graham Kemp, VK4BB, is back with the details:

--

Graham Kemp VK4BB:

“World traveller Peter Casier, ON6TT (5X1T), has been in Afghanistan for the last few days and has now obtained permission to operate in this worn torn nation.

On November 21 he was QRV as YA/ON6TT/M operating in a convoy. The foreign ministry of the Islamic Republic of Afghanistan (Northern Alliance) issued the call YA5T, which can be used on all bands by Peter, ON6TT, Matts, SM7PKK, and Robert, S53R.

Wayne Mills, N7NG, will have to look at the permission, once it is received. His initial reaction was that it should be good for DXCC. Peter will hopefully be contacting Wayne and submitting the documentation. Meantime, look out for these three operating as YA5T.”

--

And late word from the ARRL’s DXCC Desk is that it has already received acceptable documentation for YA5T and has approved it for credit. (Q-News)

Several DX newsletters report that N6TJ is active as ZD8Z from Ascension Island again. He is expected to be there through the 18th of December. QSL as directed on the air. (OPDX, Modern DX'er)

Lastly, word that high seas have forced the Ducie Island DXpedition team to abandon its already-delayed effort to reach that DXCC entity located in the South Pacific. According to the RSGB, the team was some 80 nautical miles from its destination and facing high seas when the decision was taken to turn around and head back to Pitcairn Island. (GB2RS)

**

THAT FINAL ITEM: STRANGE SCIENCE - FAT BIRDS FLY BETTER

About twice a year we bring you stories about radio tagged migratory birds. In most cases its those ever elusive Burrowing Owls. Now we have a totally different kind of bird story. It still involves radio tracking, but this time to see if bigger birds or smaller birds have a better chance to survive in flight. Amateur Radio Newsline's Joe Moell, KO0V has more:

--

European scientists have discovered what seems like a contradiction about migrating birds. They found that the fatter the bird, the more efficiently it appears to fly.

Researchers at Lund University in Sweden have studied several small species including the Red Knot. In our hemisphere, these 20-ounce wading shorebirds travel 18,000 miles every year, to the tip of South America and back to the Arctic. On the way north, they stop on the shores of New Jersey to feast on the eggs of horseshoe crabs, to build up energy for the last 2000 miles of their northward trip, which they make non-stop. On these binges, the Red Knots can double their normal body weight.

Over the past few years a number of European Red Knots were radio tagged and tracked by the Swedes as they prepared for a similar trip between the British Isles and the Russian Arctic. The study indicates that building up of fat deposits to be burned as fuel during the migration is more than worth the energy that it takes to carry the additional weight. The heavier birds apparently use their muscles more efficiently. Just why this is so remains a mystery. Even stranger is that the results seem to 'fly in the face' of a central theory of aerodynamics -- no pun intended of course.

So what does this have to do with ham radio? Well, it points out that research always seems to yield unexpected results, and it gives me a chance to remind you that dozens of ham operators in western states are listening for the VHF radio tags on endangered Burrowing Owls this winter. You could help out too. Find out by visiting my Web site -- www.homingin.com. Who knows, maybe a ham will make a similar startling discovery about the migration habits of these unique critters. That's homingin -- one word -- for the Web site, homingin.com.

For Amateur Radio Newsline, in southern California, this is Joe Moell - K-zero-Oscar-Victor saying, "no jokes about birdbrains, please."
--

All of this really goes to show that the more mankind uses science to discover the secrets of Mother Nature, the more amazed man is at what he learns.
(Ecology Today)

As I thought about some of the great answers to my original question a few more came to mind...

In reading the specs for an AOR transportable scanner, I noticed that it supports 3 different methods of "power" in. An AC adapter at 12v-500mA, an 8 AA battery NiCAD pack at 9.6v-???mA and car cigarette lighter plug at what I assume is 12v-???mA.

The car and AC adapters would seem to match but how can the NiCAD pack be different?

Thanx again,
Bob

I would say that the thing can actually run on anything from 9v up to 15v. Or possibly there is a regulator that brings the voltage from 12 down to 9.6, charging the batteries at the same time.

There are two types of AC adapters. Is it 12v AC or 12v DC? The difference is where the rectifier/capacitor is located. If 12v AC, they are in the scanner otherwise in the adapter. Since you say that it can also use a car cigarette lighter plug, that tells me that the AC adapter is putting out 12v DC, and both the adaptter and the cigarette adapter plug into the same socket(?).

After thinking about it for a second, the way that I would do it would be to have a resistor between the DC input jack and the battery (battery always in circuit). The value of the resistor would set the max current at 20 to 30 mA or so. This makes a cheap battery charger.

It's ok. You want the cw filter thats for sure. I guess depends how hard core a receiver you want. It's no ft-1000 or whatever I'm sure, but quite usable. The full break in is not the greatest by what I hear. It works, but if you go too fast "30 wpm" plus" I hear there is some kind of problem with clipping of dits or something like that. But I use semi-BK, so it doesn't bother me. I never really liked full BK and hardly use it. You could probably find someone to let you listen to one if there are any ham clubs around as many have them. I've had no problems with cw on mine so far and I haven't bought a filter yet. But it's fairly wide with no filter. I recommend one strongly. I have outboard DSP as a temporary cw filter. I'd rather have a real filter and the dsp both. The real filter will kill the blowby that you can get with busy band cdx using dsp only. BTW, the built in dsp is useless for cw. It has no bandpass shaping filters. Only noise reduction, and auto notch. MK

I've reduced the prices on these items for quick sale:

- 516F-2 Power Supply, $300

- 312B-4 Station Control, $250

- 32S-1 Transmitter, $600

- 75S-1 Receiver, $600

- all of the above items together, with interconnecting cords, $1500

- 30L-1 Linear Amplifier, $800

- all items together, including amp, $2100

- all items are in very good condition and working perfectly except for a couple of scratches on the 312B-4. Station is operating perfectly every day - contact me for serial numbers or to hear it on the air. Pictures available, too. No haggling, please - prices are firm. Call Tim, AL0F, at (520)398-9543 or email at <<tbal0f@aol.com>>.

HAM RADIO IN SPACE: ANOTHER TOURIST TO THE ISS

Could there be another ham radio space tourist headed to the International Space Station? Well the ham radio part is not yet known, but NASA and its partners in the I-S-S have agreed in principle to let a 28-year-old South African become the second paying tourist on the orbiting outpost. Amateur Radio Newsline’s Roy Neal, K6DUE, has more:

--

The International Space Station may get its second paying customer next April. South African businessman Mark Shuttleworth has signed a contract with the Russian Aviation and Space Agency to buy a seat.

Kirsten Larson, a spokeswoman for NASA, has confirmed tentative agreement with the various space agencies that would allow him to fly. Shuttleworth is to go up to the I-S-S on a Russian built Soyuz. The arrangement was negotiated by Space Adventures, an American company in Arlington, Virginia. That's the same outfit who made the arrangements for Dennis Tito, the first space tourist. Tito, KG6FZX, was allowed to get on the ARISS radio while he was up there and created quite a stir on 2 meters.

Mark Shuttleworth is not licensed at this writing but has said that he plans to be more than just a tourist looking back at earth. He has said he will take part in a number of scientific experiments. It's not too far fetched to suggest that he may be talked into taking the time to get a ham license, time permitting, as he trains for the flight. He will have to train extensively to meet rigid standards before getting final approval. If all those ifs go together, next year ham radio may have its second tourist in space to talk to and about.

For the Amateur Radio Newsline, this is Roy Neal, K6DUE

--

Ironically, the proposed date of Shuttleworth’s visit to the I-S-S would be almost exactly a year after Dennis Tito made his visit. That flight last April raised objections at the National Aeronautics and Space Administration about his fitness and training. No such problems this time around. (ARNewsline(tm) from various sources)

**

HAM RADIO IN SPACE: ISS CELEBRATES MARCONI

The International Space Station's returning skipper marked the 100th anniversary of the first trans-Atlantic wireless contact by chatting with youngsters at the exact spot history was made. The contact took place on Wednesday, December 12 th as the station, docked with the shuttle Endeavour soared over the North Atlantic, off the Newfoundland coast.

During the short QSO, outgoing station Commander Frank Culbertson, KD5OPQ, used two meter F-M to speak to teen-agers gathered at the Signal Hill National Historic Site of Canada in St. John's, Newfoundland. Culbertson managed to answer 10 questions from the students before the I-S-S flew out of range.

One of the questions asked of Culbertson was how he bathes and brushes his teeth in orbit. Another was how he gets along with his crewmates in such close quarters, and whether he misses home.

His answers? KD5OPQ told the youngsters that uses damp cloths and no-rinse shampoo, that he swallows the toothpaste since there's no sink, that he gets along fine with his colleagues, and sometimes does wished he were home.

The contact was facilitated by ARISS - Amateur Radio on the International Space station as part of an educational program at Signal Hill celebrating Guglielmo Marconi's success in receiving a wireless signal. That transmission came from Cornwall, England, on December 12, 1901 and consisted of nothing more than three dots. That’s the letter S transmitted in Morse code.

For the Amateur Radio Newsline, I’m Mert Garlick, N6AWE. Jim. (AMSAT-BB, AJ9N and ARNewsline(tm) from published news reports)

**

HAM RAIO IN SPACE: NEW HAMSAT IN 2002

Look for a new ham radio satellite to be launched in 2002. The new bird called Kolibir-2000 is a Russian and Australian School joint scientific and research microsatellite.

Miles Mann, WF1F, of MAREX reports that the new bird will be taken to orbit during a Russian a cargo mission to International Space Station. Kolibir-2000 will then stay in space attached to a remote port before being launched. (AMSAT-BB)

**

ENFORCEMENT: FCC SAYS IT WILL NOT INTERVENE IN ALABAMA NETMESS

The FCC's Enforcement Bureau has in refused to take sides in a dispute between several nets wanting to use essentially the same frequencies on the 75-meter band. The bickering had pitted the Alabama SKYWARN Net , the Alabama Traffic Net, the and the Country Cousins Net against a newly formed informal gathering of hams in another loose knit network.

The Alabama SKYWARN Net, the Alabama Traffic Net, the and the Country Cousins Net have long operated between 3.965 and 3.970 MHz. The informal group decided to try to use the same spectrum. That’s when the dispute erupted and everyone wrote to the FCC. After reading the complaints, Special Counsel for Amateur Radio Riley Hollingsworth told all four that it was really up to them to solve the problem, and to do it without breaking any rules:

--

Hollingsworth: “We issued a letter to all parties in a 75 meter interference dispute and we warned all parties and [also] attempted to explain what incidents were enforcement problems and what activities were just poor Amateur practice and degrading the entire service.”

--

Hollingsworth’s response went to Henry Willmon, WA4GQS, Sal Viglione, W4SAL, Jeremy Jackson, K9CNI, and Alabama ARRL Section Manager Bill Cleveland, KR4TZ. (FCC, RAIN)

**

ENFORCEMENT: FCC WARNS UNCOORDINATED REPEATER OWNER AND HIS USERS

The FCC has again written the operator of an uncoordinated Southern California repeater about ongoing interference. Again the FCC’s Riley Hollingsworth:

--
Hollingsworth: “We issued a second and final warning to a Los Angeles California licensee; Angos Winke, KC6OKA, about operating an uncoordinated repeater that is interfering with the coordinated repeater W6IER. {This is] a repeater operated by the Inland Amateur Radio Club.
That licensee will also be receiving a letter from the Los Angeles office prohibiting him from using Automatic Remote Control for the repeater.”
--

That means the system can only be on the air when there is a control operator present and that ham will be held responsible for any interference caused by the repeaters transmitter.

But that’s not all. The FCC has also sent letters to several users of the uncoordinated repeater a warning of their own:

--
Hollingsworth: “We sent warning notices to five licensees in the Southern California area concerning operation on the coordinated repeater I mentioned a moment ago: The one that is causing interference to W6IER. This is in addition to the action mentioned about taking the licensee off of Automatic Remote Control. And we warned them about interference to the coordinated repeater.”
--

Each of the letters says essentially the same thing. That the FCC has information indicating that interference to the repeater has been occurring from each of the users stations through a repeater on the same frequency as W6IER, but one that uses various call signs. It warns the users that continued interference to the W6IER repeater could result in a monetary forfeiture of up to $7,500. Also, depending upon the evidence, revocation and suspension issues might also be warranted. (FCC, RAIN)

**

BREAK 1

This is ham radio news coming to you from the United States of America. we are the Amateur Radio Newsline, heard on great bulletin stations around the world, including the Broward Amateur Radio Club net serving Ft. Lauderdale Florida and vaccinate.

(5 sec pause here)

**

FCC: FCC LIBRARY CLOSED TO THE PUBLIC

Effective December 5 th and until further notice, the FCC Library is closed to the public. This action is said to be necessary because the Commission is using a portion of the library to temporarily house FCC employees. More information is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-218204A1.doc (CGC Communicator, FCC)

**

RADIO DISASTER: MISSOURI TOWER FALLS

A 1,627-foot broadcast tower near Springfield, Missouri toppled to the ground Friday morning November 30th from the weight of a foot of ice from several days of freezing rain. According to a report from KYTV the 33-year-old tower collapsed on itself like an accordion.

No one was around and the damage was confined to the area around the transmitter building at the base of the tower. No engineers were in the transmitter building when the accident occurred.

KDEB television and KTXR-FM were the resident broadcasters on the tower which was owned by American Tower of Boston. The total height included the 1,560-foot tower plus the antenna on top of it. The loss could cost American Tower or KDEB millions of dollars. (Listener reports)

**

HAM RADIO HELP: THANKSGIVING BASKETS

On a much happier note, a group of Indiana hams make the news this week for their generosity. Amateur News Weekly’s Jack Parker, W8ISH, tells us that the radio amateurs recently brought some holiday cheer to those who might not otherwise be able to celebrate:

--

Thanksgiving came early for many residents of Hamilton County. A half dozen Hamilton County Amateur Radio operators helped to deliver over 200 Thanksgiving food baskets to shut-in residents across the county.

This is an annual project headed up by John Wadsworth AA9KB. The food baskets are arranged by the local chapter of the American Red Cross.

Reporting for Amateur News Weekly, I’m Jack Parker, W8ISH.

--

Jack says the Hamilton County hams will be back again next year. (ANW)

**

HAMVENTION 2002: FORUMS SCHEDULE ANNOUNCED

If you are thinking about attending the 2002 Dayton Hamvention, then go its website and click on the Forums area. Forums Chairman Jim Ebner, N8JE, says that the initial schedule for next May's Dayton Hamvention group discussion sessions is now on line and Amateur Radio Newsline's Don Wilbanks, KC5MFA, takes a peak:

--

As previously announced, the theme of the 2002 Hamvention is Emergency Communications. In keeping with the theme, some of the highlights include Gordon West WB6NOA explaining how use of the Global Positioning System. Gordo will also show how it offers hams the ability to know where they are and describe where they are to better than a foot. That's very important information to have on hand when working an emergency situation.

But that's not all. Also on hand will be John Mc Hugh, KU4GY, the Coordinator for Amateur Radio National Hurricane Center, W4EHW. Mc Hugh will show the volunteer public service work of the gang at W4EHW, and the inside workings of the National Hurricane Center in Miami.

KU4GY will also detail two exciting projects called CARMEN and CWOP that they are working on in conjunction with NOAA. What are they? You will have to attend his session at Hamvention 2002 to find out.

Vermont's Mitch Stern, W1SJ, will also be there to talk on techniques used by the best operators involved in emergency communications. This session will also include information on the proper way to communicate during emergencies. Also hosting a session will be Mid-Cars on the importance of mobile to mobile and mobile to base communications are during emergency times.

Amateur Radio Newsline will also be there once again hosting the Live Town Hall Meeting. Bill Pasternak, WA6ITF, will moderate a session on Ham Radio Emergency Communications in the 21st Century titled Looking to Apply What We Have Learned From the Past.

And also look for the most popular sessions including Carole Perry's Youth Forum and Joe Eisenberg, K0NEB, with the latest in kits and how to build them.

This and a lot more happens May 17th 18th and 19th at the HARA Arena in Dayton Ohio. We will see you there.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA.

AMERICA AT WAR: RELIEF FUND GROWS FOR WTC VICTIM'S FAMILIES

A relief fund, established to benefit the families of the six broadcast engineers and technicians lost in the collapse of the September 11th World Trade Center has begun providing aid to the families of those killed in the terrorist attack. Amateur Radio Newsline’s Bill Pasternak, WA6ITF, has the details:

--

The Portland Oregon S-B-E electronic newsletter says that soon after its inception the S-B-E sponsored fund began drawing the attention of individuals and companies from across the country. And as of November 1st, almost $50,000 had been raised to assist their families of those who lost their lives in the collapse of the World Trade Center.

The fund that was started by the Society of Broadcast Engineers and the Ennes Educational Foundation Trust. Initial checks to the nearest family member of all six men were sent by October 31st. Eventually every penny off the money raised will go to the families of the victims. This is because the fund is all volunteer. There is no overhead of any kind involved and there is also no restriction on how the recipient may use the money.

In Los Angeles, I’m Biill Pasternak, WA6ITF, reporting for the Amateur Radio Newsline.

--

If you are interested in contributing, checks should be made payable to the Ennes Educational Foundation Trust and mailed to the Society of Broadcast Engineers, Inc., 9247 N. Meridian Street, Suite 305, Indianapolis, Indiana 46260. Mark your check to the attention of the Relief Fund. (Portland SBE)

BREAK 2

By telephone, satellite and the World Wide Web, we are the amateur Radio Newsline with links to the world at our only official website - www.arnewsline.org.

**

TECHNOLOGY HONORS: FIRST ROTARY SPEED DIALER TO SMITHSONIAN

The developer of the first speed-dialer for rotary phones has finally been honored forty years after developing the unit. Pennsylvania inventor Vincent Iannucci spent two years developing the world's first speed dialer for rotary phones. The motorized device stored numbers and could dial up ten digits with the push of a button. It was nearly ready for the market in 1961, but production was disconnected by Bell Telephone Lab's after the development of touch-tone phones.

Iannucci put the prototype on his desk and used it until his own company changed over to the tone dialing system. He was going to throw it away recently, but a relative suggested he offer it to the Smithsonian. Now it's joining the museum's collection of electro-mechanical devices. (Science Online)

**

ELECTRONIC SAFETY: LIGHTING RECALL

A South Carolina lighting company has recalled over 10,000 fluorescent lights because they are improperly wired and pose a fire hazard. Progress Lighting, of Spartanburg, has received two reports of the fluorescent lights smoking and smoldering, according to the Consumer Product Safety Commission. No injuries have been reported.

The recalled fluorescent ceiling and bathroom lights were sold in various shapes. The label on the light contains the manufacture's name, the manufacture date, and a catalog number. Consumers are advised to using the recalled lights immediately and contact Progress Lighting. The company can be reached at area code 866-696-8593 between 8 a.m. and 5 p.m. EST Monday through Friday. More information is on the web at:
www.cpsc.gov/cpscpub/prerel/prhtml02/02036.html (Press release)

**

HAM RADIO IN SPACE: AMSAT ON-LINE SURVEY

AMSAT-NA has developed a new on-line volunteer survey, designed to identify the interests and skills of those who may be available to directly help in efforts to develop the amateur satellite program. The survey was developed by a committee led by AMSAT North America
Vice-President and Government Liaison Perry Klein, W-3-P-K and is designed to be completed and returned on-line and takes only a few minutes to fill out. To request the survey, simply send a e-mail request to volunteer@amsat.org (AMSAT-NA)

**

HAM RADIO IN SPACE: AO-40 UPDATE

A scheduled attitude shift that is necessary to compensate for unfavorable sun angles, will leave the Oscar 40 satellite's antennas pointing away from earth until next spring. The adjustments will lead to a transponder shut-down period that could start as soon as late December. The satellite is currently in a long period during which earth eclipses the sun near perigee - its point closest to earth. Like most satellites, Oscar 40 relies on solar panels for its power. (AMSAT-NA)

**

DX

In D-X, Eddie Seymour, WB4MLE reports a really neat opening on 6 to Europe the morning of December 5th. From 1400 to 1500 U-T-C, Eddie, operating from grid EM72 heard or worked SP, DL,YO, 9A, S5, ON, OK, 4N, G and GW. This, as 6 meters defies the experts and stays the D-X band that just won't quit. (VHF Reflector)

A new 2-meter propagation study beacon is being established at the Poldhu Amateur Radio Club in the United Kingdom. It is located 8 kilometers south of Helston in Cornwall and operates under the call sign GB3SSS will operate on 144.407mhz. Output power is 25 watts to two 8-element stacked Yagis beaming at 284 degrees. It is hoped to increase the power to 100 watts later. For further details please contact the beacon keeper, Mr. L Davey-Thomas, G3AGA, at his callbook address. (GB2RS)

Meantime, a bit lower in frequency look for the Council of Europe Amateur Radio Club. It plans to be on the air as TP5CE on the 14th to 16th of December, including the ARRL 10 Meter Contest. Outside the contest the main activity will be on all bands RTTY and CW. (GB2RS)

And PY8IT will operate as PYZ0FT from Fernando de Noronha between the 12th and 18th of December. He will concentrate on RTTY and PSK31. In both cases, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: AUDIO TIME TRAVEL

And finally this week, some words about time travel, Amateur Radio Newsline, our predecessor Westlink Radio and the audio history of ham radio since 1976. That's the year that Westlink Radio started to bring you the sound of ham radio from around the nation and around the world. And believe it or not, we still have almost every newscast tape we ever aired. In fact, we are in the process of archiving them and we have found a lot of moments that should not ever be forgotten. Moments like this from November of 1983:

--
Audio Here: W5LFL from space
--

That was United States Astronaut Owen Garriott, W5LFL, making the first ever manned ham radio contact from space. Its a part of our history as hams and as a nation and needs to be remembered. So for the next few weeks we will let you relive the time that W5LFL spent orbiting the Earth and making ham radio history. Here's how.

As you know we recently began providing our newscast audio as a downloadable Real Audio file from our own website at www.arnewsline.org. All you need to do is click on the newscast number at the top of the page to reach the FTP site. Now, when you go there, you will also find another audio file outlined in bright green. Its called the Newsline Extra and all you need to do is to click on the word download and it will soon be in your Real Audio equipped computer, ready to play.

In the coming months as we archive more and more of our older Westlink Radio programs we will try to bring you the best of them. Meantime, we hope you will enjoy this December 11th 1983 ham radio in space retrospective hosted by Amateur Radio Newsline’s Robert Sudock WB6FDF and featuring the story of ham radio space pioneer Owen Garriott W5LFL. (ARNewsline(tm))

I am looking to get some military walkie-talkies. I'd love to have a set
of some of those big old G.I. ones from WWII etc. Are these standard
powers and frequenices too? I have a technician class license and want
everything to be legal as far as freq and power goes.

I've moved in the last couple of weeks, and need to update my
license's address information. With the anthrax situation going on,
I'm unsure of whether or not the FCC is accepting mailed license
updates and if not, how I could go about changing the address on my
license. I've heard some things about ULS, but not enough to tell me
what to do about this.

Thanks for any help...

Jim

Hello Van,

Download the demo of Log Windows from <http://www.cssincorp.com>. I've
been using it for several years and have over 20,000 entries in the
log.

Mike/keypad from any radio wanted. Wanto to use it rarely with a Alinco HT

I know, I know, I'll have to supply juice to pad &, perhaps, mic preamp.

Diag. of jack on radio where it once plugged wud be a big help.

Thanks for attention es 73s

Help!!
I need a manual for an Alinco DR-610 radio. I have checked Alinco's site
but they don't have that one available for download. I also e-mailed them
but I have gotten no response so far. Does anyone know where I can order or
download a copy.

Thanks

Frank

You can also do this online, although getting started is complex.

First, you need to use Netscape 4.7 or better, MS Internet Explorer will NOT work for updates. I just checked the system upgrade of December 3, and now it seems to work with IE 5 as well.

Many information sheets and forms to print out on the site require Acrobat Reader, but that is a freebie program that most people have.

go to www.fcc.gov/uls to start. There are many links there which explain the system.

You need to register with your TIN (Taxpayer ID Number, which is usually the same as your SSN). Now they assign you an FRN number in the CORES system, which unifies all of your transactions with the FCC. You will pick a password so that only you can modify your info.

Then you can get in and make an "Administrative Update" and change your contact info. You do NOT want to make a "Modification", which would alter the terms of your license.

After you make the address change, they will mail you an updated license with the original expiration date.

You can also use a form 605, but they will only accept recent versions of the form.

HTH,
Happy trails,
Gary (net.yogi.bear)

I have an SB-401/ SB-303 pair that has been sitting around for a while.
Is there someone in Canada (I'm in Ottawa) that can go over these things
and bring them right back to spec?

Thanks,
Rob

Thanx Mark,

You mentioned the use of batteries. I'm thinking about just setting up a new
car battery I happen to have laying around doing nothing. Good or bad idea?
Would it be as simple as connectiong the cigarette lighter adapter?

Bob

Of course it is! <g> But then I would say that, wouldn't I?

Several people have mentioned that,as well as random characters, you
need to practise with words and actual QSOs. Well, NuMorse can send
QSO's as well as random characters and text from files. Here is how

you set it up:

1) From the Main menu go to Play continuous (Or Play Drill)
2) The "keyboard window" will be displayed.
3) Look down the Source list at the left of this Window.
4) Check the QSO box.
5) Now click on Play and a QSO will be sent.

The QSOs are all different and authentic (almost...) and will continue until you click on Stop. You can also view each QSO as text. Cick on the button at the bottom of the source list, the one with the up/down symbols. A QSO window will open and the cursor will highlight the QSO character being played.

There are also controls to select "rubber stamp" and "rag chew" QSO's if you want to vary the length.

Hope this helps folk get the best from NuMorse.

Check my website for a "Deluxe NuMorse" and software to help with the written theory test.

The Universal Licensing System (ULS) and Antenna Structure Registration (ASR) are now compatible with Internet Explorer and Netscape Navigator.

ULS and ASR can now be accessed with Microsoft Internet Explorer 5.5-6.0 and Netscape Navigator 4.5, 4.51, 4.61, 4.7, and 4.75.

I've got a problem that I've had for a while and figured I'd see if anyone has any suggestions. My TV and Stereo sit next to each other. When I'm watching my TV (which is controlled by remote control, of course), the stereo periodically turns on/off. The stereo is also controlled by remote with the ability to turn it on/off, adjust the volume or tune the radio station. The stereo comes on by itself with no apparent pattern, just randomly and not neccessarily when I am using the TV remote.

This occured when I was living in RI and also now in NJ, so it's not a local thing, it's gotta be the TV affecting it. How can I block the TV from doing this? Moving them apart isn't possible, because they sit in an entertainment center. Any idea why the TV would be emitting RF that would cause the stereo to come on and off?

Andy,

You definitely have an RF problem as the remotes are all infrared and have digital coding which is pretty hard to fake out (I'm going strictly by experience here and not expertise as far as the coding is concerned). The one question I would ask is: does your stereo turn on when the tv is powered off? The obvious cause of the problem may not be so "obvious" after all. I would also ask if the two devices share a common power feed, e.g. are they both plugged into the same outlet through a strip? The reason I ask this is that the interference can be coming through the air, through conduction on the lines or a combination of both. Modern tv's use switching power supplies which are very hard on the rf environment. They are supposed to pass the rfi regulations, but there are no guarantees here as the product line of the tv is approved and not each and every tv that rolls off the line. Shielding problems could be present due to manufacturing defects, etc. Try insuring that the two devices are grounded to the "green" power line and if your tv has only two wires on the line, then you may consider doing a mod on the tv to get the chassis grounded after you confirm that the stereo is turning on only when the tv is on. Suggestions which I can offer at this time over and above this would involve Faraday shielding, etc. and lets don't go there. :-) Hope this gets the discussion going.

73,

Steve Carlton WB4CZR

[Stereo randomly turns on and off; remote control issue is being suspected]

Most of the remote controls use infrared LED transmitter and phototransister receivers. I would think it's unlikely to be an RF problem. I had a similar problem, and one day it happened right when a car drove by that threw a bright reflection of the sun across the room. So, a possible cause might be stray light reflections, particularly if this is happening during the day and you have lots of sunlight hitting the room. To rule this out, try putting something in front of the senser on the stereo (or temporarily covering it with electrical tape) and see if it still happens.

I just utilized mine for the ARRL 10m contest. Although I ran QRP for my own reasons, the rig performed quite well.

Rob,
    I don't think there are any places specializing in Heath Kit
equipment any more. There used to be, but that was a few years
ago.
If you have the construction manuals, the alignment procedures
aren't
really that bad, you might do it your self, with minimum
equipment.
    I hope that helps a little...

I am trying to clone a couple of VX5R radios. I have a 1/8 inch 3
contact plug.
I have disconected the tip and hooked up the center and the ring. I
get "Clone Error" messages. Do I need to criss cross the center and
the ring conections?
HELP
:-)

A regular stereo patch cord with 1/8 plugs does the job no rewiring
needed.
I use Radio Shack 42-2387D. That's a Canadian number maybe US number is
the same mine is the so called "gold plated" 6 ft one.
VX5s have to be the same ie. no mods or you might get by if they have
the same mods. Not sure about that though. Make sure the cable is
connected before you
turn the radios on. I have been told, but unable to confirm, that VX5s
scan for speaker mike etc. and they do not always accept them AFTER
being turned on.
I start the receiving radio first "CLONE WAIT" as explained in the
manual.
Then start sending radio "CLONE TX"

Worked fine the one and only time I did it, but I use the same cable
with EVE and it works ok for that too when connected to an FT90
interface.

Good luck

Rob -

I do not know what "Doc" is referring to.
HeathKit support and repair work is still readily available, from a number of sources (I am not aware of a Canadian firm, however).

Manuals for many kits are still available directly from HeathKit

Heathkit (which is still in business for educational systems,etc.) refers past kit owners to:

RTO Electronics In Benton Harbor, MI (has extensive HeathKit parts collection)
http://www.rtoham.com/

Here is the KB9JJA's HeathKit web site:
http://members.accessus.net/~dwentz/kb9jja/heathkit/

NC Total Electronics has a number of parts:
http://www.nctotalelectronics.com/

Here is the HeathKit board for equipment owners:
http://members3.boardhost.com/heath32a/

The Heathkit Shop
http://www.theheathkitshop.com/

Reference Page
http://www.heathkits.com/new_collection.html

Heathkit parts (New Old Stock - NOS) .. you have to inquire he does not have the thousands of boxes
inventoried for the Internet.
http://www.multi-volti.com/

There are others, but this is a "start"

Also, do a Goggle search (hey its the Internet and search engines are the card catalogs)
on "Heathkit" and "repair" you should get a number of other web pages

This is a good point that I would have never considered.  I hope
that I continue to learn as I go older.  Thanks Bill!  I am not
being factitious.  My motto is: It is the little, simple things that get you;
complicated ones are easy. :-)

> I am looking to get some military walkie-talkies. .... <snip>

All this is from memory, without rechecking any references - so some of it might be slightly in error.

The WWII American Walkie Talkie was a manpack and operated in the HF range. They were AM and the model number was BC-1006 (This info I'm least sure of; the model number is probably wrong.)

At the end of WWII propagation was better understood, and a lot of frequency allocations were changed with the birth of low & high VHF TV & the Aviation Band. On the ham side 5m became 6m, & our high VHF assignment became 2m. The Army tactical comms were set in the low VHF band, below TV Channel 2.

Post WWII, and during the Korean Conflict and Viet Nam a hand held radio (bigger than a banana - smaller than a loaf of bread) was standard. It was crystal controlled and did cover 6m (50-54 MHz) with FM. The model number was AN/PRC-6. This is a tube rig of course, and took a special battery. The audio connector was old style UG-77 (I think) - about an inch in diameter.

There were also three manpack models, the AN/PRC-8, -9, & -10 that were tuneable, FM, and had slightly over lapping frequency ranges. (the -8 & -9 over lapped, as did the -9 & -10). At least one of them covered 6m (probably the -10) and one of them extended down to the top end of 10m (probably the -8). These are tube rigs also of course, and took a special battery that was different from the AN/PRC-6. It had the same audio connector as the PRC-6.

During the Viet Nam war, the army finally fielded a transistorized rig. It was tunable, FM, had more power, and covered the entire range of the PRC-8 to -10 and then some. It was the AN/PRC-25, a manpack rig with another special battery. I think the 'final' may have been a tube. The audio connector got smaller - about a half inch in dia.

In the early 70's the PRC-25 began to be replaced by the AN/PRC-77. It was similar in mechanical design but had updated electronics. All accessories were interchangeable with the PRC-25.

I lost track of all the newer stuff since then. I retired before

Desert Storm.

That was really informative Neil. Really cool to see how radios have evolved
since WWII & even before. Thanks.

73's,
Mike

I'm not sure where the cig lighter adapter comes in, but yes, nothing
to hooking it up. + to +, - to -. But don't use any adapters. That
will just cause a place to have possible resistance. I use anderson
connectors for all 12v gear. They are about the best you can get for
connectors. But that wouldn't be really necessary for what you are
doing. Just make sure the connections are good. The rig can draw up to
18-20 amps full power transmit.Run your red/black icom cord straight
to the battery. Also the 706 can draw up to 1.8-2.0 amps just on
receive depending on how many lights are on, preamp, etc, etc. So you
will need a charger to keep it up. But it can be a trickle charger. I
used a 3 amp job for years. I now use a 12 amp automatic charger which
is usually in the 2 amp charge setting. I only use the 12 amps when I
forget to plug the charger back in after a storm or whatever, and want
to get the battery up quick. MK

Ok, to answer the questions... No, the stereo does NOT turn on/off when the TV is off, only when the TV is on. They are both plugged into the same surge protector. Both devices have the 2 wire plug, not the 3.. I honestly can't say if it only occurs in the sunlight, I'll have to double check, but I am pretty sure it happens any time day or night..

Oh, and NO... no one is playing a game with me through the front window, but thanks for that suggestion. :)

I will try the tape over the stereo sensor idea, as we don't even use a remote with it usually.

Without replacing the cords on the devices, is there something else I might be able to put between the two to help reduce the RFI?

I highly recommend Tony's software. Choose NuMorse or NuMorse Pro; either one is excellent...I have purchased both. I especially like Pro. And NuTest really does a fantastic job preparing you for your next license upgrade.

Besides, Tony's support is the best!

Nope...no relationship to him or his business at all. Just a very satisfied customer.

AMATEUR RADIO NEWSLINE(tm) REPORT #1271 - DEC 21, 2001

Amateur Radio Newsline report number 1271 with a release date of Friday, December 21st, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.   A national ham radio society is asked to train new hams for government service. This story is first on this weeks Amateur Radio Newsline report number 1271 coming your way right now.

(Billboard Cart Here)

**

THE EDUCATION SCENE: HAM TRAINING LEADS TO SA GOVERNMENT JOBS

A government agency has asked a national ham radio society to help train new hams. The reason. careers with that agency. Its happened in South Africa as we hear from Q-News Graham Kemp, VK4BB:

--

In South Africa, their Department of Communications contacted the SARL with the request to train seventeen post graduate students as amateur radio operators. These students had already qualified in different fields, some technical and some in the Information Technology fields. There were nine ladies and eight men. From next year they will be employed by the Department of Communications, and the idea was to give them some experience in the field of radio communications.

Training was done by Henry Chamberlain, ZS1AAZ, over a period of one full month. In addition to lectures, the students could see practical demonstrations of amateur radio and they spent one period building and testing a Morse Code practice oscillator. They also visited ZS1AAZ's home shack. The seventeen students had already proved their ability by passing their previous studies successfully. It was therefore no surprise that they ALL passed the amateur examination.

For the Amateur Radio Newsline, I’m Graham Kemp. VK4BB, of Q-News.

--

The seventeen will be assigned specific jobs with the South African Department of Communications in early 2002. (SARL, Q-News)

**

SPECTRUM SHARING: FCC SAYS YES TO HIGHER POWER UNLICENSED TRANSMITTERS AT 2.4 GHZ

The FCC has approved issued new rules permitting certain unlicensed Part 15 devices operating between 2405 and 2450 MHz to use higher power, but under significant restrictions. The band is allocated to amateurs on a co-secondary basis. Amateur Radio Newsline’s Norm Seeley, KI7UP, takes a look at the FCC action:

--

According to the C-Q Magazine website, the decision was adopted on December 11Th. In it, the FCC approved a petition by Sierra Digital Communications, Inc. to permit unlicensed fixed point-to-point transmitters in the band to operate at field strengths of up to 2500 millivolts per meter. This is a tenfold increase over past power limitations.

Sierra Digital Communications manufactures and sells equipment for wireless data communications, including high-speed wireless computer networks and Internet links. The ARRL had opposed Sierra’s petition on the basis of increased risk of interference to amateur and amateur satellite operations. This is because the downlink from the AO-40 satellite is in the 24 GHz band.

But the FCC said it believed the restrictions it is imposing on the higher-power transmitters will provide sufficient protection to other users. This includes industrial/scientific/medical equipment, radar and Earth exploration satellites, in addition to amateur radio. The new rules require highly directional antennas and high frequency stability of transmitters.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

In its decision, the FCC singled out an ARRL comment where the League clamed that Part 15 devices are permitted by the Communications Act of 1934 only where they have no interference potential to licensed services. The Commission called the League's interpretation of the law overly conservative. It said that its rulings to date appropriately provide a means for allowing unlicensed devices to share spectrum with licensed services with little risk of interference and adequate protection to licensed service. (CQ)

**

HAM RADIO AND THE WAR: MARS ON THE AIR FROM THE WAR ON TERROR

Ham radio is making it possible for those fighting the war against terrorism to phone home. This as the ARRL Letter announces that Army Special Forces on duty in Islamabad, Pakistan, and in other undisclosed locations have begun keeping in touch with home via MARS -- the Military Affiliate Radio System.

Phone patches provided by the Military Affiliate Radio System make it possible for troops to call their families in the US from areas where commercial communications channels are not available. Amateur Radio operators enrolled in MARS provide the connection between the Military Affiliate Radio System stations deployed overseas and the telephone system back home.

During the Vietnam War, phone patches were a major source of comfort to families and service members alike. MARS also responded during Operation Desert Storm. (ARRL)

**

BREAK 1

Wishing you a Happy Holiday from the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Great South Bay Amateur Radio Club repeater, W2GSB, serving West Babylon New York.

(5 Sec Pause Here)

**

HAM RADIO AND THE WAR: GODDARD ARC FEELS THE PINCH

The Goddard Amateur Radio Club says that it has been having serious problems with manpower lately and the war on terrorism is partly to blame. This is because new security restrictions imposed after September 11th require all visitors to Goddard to be escorted by a badged employee at all times.

According to Dan Schultz, N8FGV writing to the Amsat Bulletin Board, the clubs WA3NAN ham shack is located on government property we are bound by the new restrictions. This says Schultz makes it much harder to bring in control operators who are not Goddard employees. As a result, WA3NAN which for years has been the primary rebroadcaster of shuttle communications on the ham bands is not there as often as it would like to be.

Schultz also notes that the Goddard Amateur Radio Club currently has no president because no one has stepped forward to accept the job. The position of Shuttle Retransmission Director is also vacant, this is the person who makes the phone calls to get operators lined up to pull shifts at the retransmission facility.

Schultz says that the long term technical solution will be to automate the station with remote controls and telemetry for the transmitters so that the retransmission operator can operate from his home. But adds N8FGV, but that is still a little ways off in the future. As a result, WA3NAN is not there as much as it used to be.   (AMSAT-BB)

**

AMERICA AT WAR: NEW HOMELAND TERRORIST ALERT SYSTEM PROPOSED

Homeland security chief Tom Ridge is considering a multistage system for terrorism alerts. Ridge is also weighing how to reimburse states for the costs of increased security since the terror attacks.

Since the September 11th terrorist attacks on New York and Washington, Ridge has issued three general warnings.   None of the alerts identified specific targets.

Now, according to news reports, Ridge will propose a four-stage Threat Alert Network similar to the military's DEFCON'' system. DEFCON alerts military personnel to the seriousness of a threat. A private sector version would be aimed at helping state and local law enforcement personnel determine the level to react to a Federal government issued terror warning.

The proposal came to light after California Governor Gray Davis met with Ridge about a week and a half ago. Davis told Ridge he had proposed such a similar system for California, and said Ridge had asked him to wait pending a national model. Ridge told Davis that he hopes to unveil the national system by January 15th of 2002. Whether or not ham radio will play any part in such an alert system is not known as we go to air. (Published news reports)

**

AMERICA AT WAR: CONFERENCE HELD ON ALERTING THE PUBLIC

Still in there area of alerting the public, more than 120 leaders from the emergency warning community met November 30th and unanimously called for the creation of a public-private partnership. This, aimed at improving the delivery of timely and accurate emergency information to people at risk. Don Wilbanks, KC5MFA reports:

--

The group came together at a special conference arranged by the National Warning Organizing Committee. This is a group of emergency warning advocates representing the public and private sectors.

Those attending included federal, state and local government officials, not-for-profit organizations, and representatives from the private sector. And in the end the group has tasked itself to improve the delivery of warnings and emergency information to the public. This, through better education, research, standards creation and policy recommendations.

The Committee Chairman is David Liebersbach, Director of the Alaska Division of Emergency Services. He has appointed Peter Ward, formerly of the U.S. Geological Survey and chair of a White House-appointed working group on natural disaster information systems, to head up a committee to determine the new organization's structure and governance. Ward also serves as the new organization's spokesman. More news on the work of this committee as information is released.

For the Amateur Radio Newsline, Don Wilbanks, KC5MFA, in New Orleans.

--

The conference was hosted by The MITRE Corporation in McLean, Va. MITRE is a not-for-profit national technology resource that provides systems engineering, research and development, and information technology support to the government. (MITRE)

**

HAM RADIO AND EDUCATION: HAM RADIO MASS BALLOON LAUNCH

The Timberlane Regional High School, in Plaistow New Hampshire will be taking part in a high altitude experiment next spring. This with an announcement that the Coordinated Algebra II and Physics classes taught by Lorainne Mascioli, N1VYQ, and Lou Broad, N1RCA, are planning thier third year of ham radio and high altitude balloons in May of 2002.

Six student teams will attempt to launch their balloons at the Hosstraders Ham Fest at the Hopkington Fair Grounds in New Hampshire. Each team is responsible for design, construction, and operation of their system. Each balloon will carry a GPS receiver, a packet reporting system and several experimental payloads. This could include cameras, video, amateur television and cross band repeaters. At maximum altitude such systems will have a range of 300 miles and should easily cover all of New England and more.

The class has grown to 34 students and they are planning to launch six balloons in a two day period! This could make it a record breaking event in both ham radio and high altitude ballooning. For more information check out the CAPSAT Website located in cyberspace at http://www.mv.com/ipusers/llb/capsat.html (Via Internet)

**

HAM RADIO SPOTLIGHTED IN POUGHKEEPSIE JOURNAL

New York’s Poughkeepsie Journal has highlighted ham radio in a December 6th front page article. The piece focused on the public service aspects ham radio with quotes and pictures.

According to Andrew Schmidt, N2FTR, who is an ARRL Assistant Director in the League’s Hudson Division, many Poughkeepsie area local hams spent time at Ground Zero or at the Red Cross centers in the greater NYC area following the September 12th terrorist attacks. Andrew says that their work is well highlighted in the article. The link is: http://www.poughkeepsiejournal.com/thursday/community/stories/co120601s12.shtml. (Via Internet)

**

A SPECIAL AM EVENT: THE HEAVY METAL RALLYE

This is Paul Courson WA3VJB with news of an operating event Saturday night, December 22nd. It's the Heavy Metal Rally, featuring big iron, vacuum tubes, and the warm and inviting sound of AM on the shortwave ham bands.

Starting around local sunset listen for rigs in the 250 watt or 250 pound category to populate AM gathering points on 160, 75 and 40 meters.

Jim, W8MAQ was testing HIS 1947 Collins 300-G a few days ahead of the Heavy Metal Rally. The retired broadcast transmitter re-tuned to 75 meters sounded like this:

In-Q: it's been great to get on... 300-G..
Out-Q: forward to that

--

Prizes include a trophy, pictured as a posting on QRZ.com, for the best sounding station.

Last year more than a hundred stations took part -- and the winner was Mike, WN3B, on a Gates 250-C. He gave Jim an audio report the other night:

--

In-Q: It's got more highs....
Out-Q: Shure 55
--

The Heavy Metal Rally is sponsored by Electric Radio, a magazine featuring vintage ham radio, and published by Barry N6CSW. The event was pioneered by Bill, KD0HG of Colorado, a broadcast engineer with a knack for big homebrew rigs that sound great.

Frequencies and a website are listed on the news page of QRZ.com.
Paul Courson, WA3VJB, Annapolis Maryland.

**

HAM RADIO HISTORY: COLLINS RADIO CENTER NOW OPEN

The new Collins Radio Center which is the headquarters for the Collins Radio Association is now officially open for guests and visitors. Located near Johnstown, Pennsylvania, the Collins Radio Center includes a representative collection of Collins radio equipment, from the 1930's to the present. There are other classic and antique radios on display as well. More information is on the web at www.collinsra.com. (Collins RA Press release)

**

HAM RADIO BUSINESS: CITY ELECTRONICS - RIP

Alex Stalinsky, WA5UHT, who owns City Electronics, a small parts outlet in Houston for almost 50 years, has decided to call it quits. According to Chris Boone, WB5ITT, this place was one of the main sources of parts, components in Houston long before the likes of Mouser and Digikey took off in mail order sales.

Chris tell Amateur Radio Newsline that he bought many parts from City Electronics in his early days of repeater building. In fact, Chris says his mother claimed that he owned half of the local Radio Shack but she was wrong. It was really like he was a part of City Electronics as were many other young Houston area hams and Chris tells Amateur Radio Newsline, it will be missed. (WB5ITT)

BREAK 2

By telephone, satellite and the World Wide Web, we are the amateur Radio Newsline with links to the world at our only official website - www.arnewsline.org.

**

EMERGING TECHNOLOGY: INTELS NEW WARP SPEED CHIP

In another step toward faster computers, Intel Corp. has developed two new technologies that will help the tiny transistors inside microprocessors run cooler, use less power and operate more efficiently. The new designs complement several recent breakthroughs in building minuscule transistors that form the basis of all modern computing as they switch on and off billions of times a second. Earlier this year, Intel unveiled transistors just 20 nanometers wide. Today's Pentium 4 has 42 million transistors, each about 180 nanometers. For reference, a manometer is about 10,000 times narrower than a human hair. (Intel)

**

EMERGING TECHNOLOGY: DTV ROLLOUT UPDATE

Roughly two-thirds of commercial television stations plan to broadcast a digital signal by a federal government deadline of May 1, 2002. This, according to the National Association of Broadcasters.

In a report to the Federal Communications Commission, the industry group said that many of those that won't make the deadline are waiting for equipment to be delivered and expect to have digital broadcasts on the air in the months afterward. But some stations in smaller markets are having a hard time paying for the upgrade, the association says.

Right now, most home television sets in use receive only analog signals. But congress has mandated that broadcasters must give up their analog channels to the government by 2006. As a result, there are concerns that consumers won't have made the costly upgrade to televisions that can receive digital signals by that date. (Broadcasting Daily)

**

HAM RADIO IN SPACE: EXPEDITION 4 CREW NOW ON THE ISS

An all ham crew is now in charge of the International Space Station and will be for the next six months.

Three astronauts and cosmonauts now running the ISS. They are Russian Commander Yuri Onufrienko, RK3DUO, along with American Flight Engineers Dan Bursch, KD5PNU, and Carl Walz, KC5TIE. They make up what is called the Expedition 4 crew and all three are expected to be on the air regularly for school contacts and possible open QSO times made available to talk with hams worldwide, as time permits.

The Expedition 3 crew comprised of United States Commander Frank Culbertson, KD5OPQ, along with Russian Flight Specialists Mikhal Tyurin and Vladimir Dezhurov is now back on good old Mother Earth. They returned on Monday, December the 17th aboard the space shuttle Endeavour. (AMSAT-NA, ARISS)

**

HAM RADIO IN SPACE: EDUCATIONAL ASSISTANCE FROM VK5ZAI

Attention educators. If you are thinking about teaching the International Space Station, here is a bit of assistance.

Tony Hutchison, VK5ZAI has updated his web pages with links to help schools in obtaining educational programs associated with the I-S-S and space science in general. Hutchison says that this should be of interest students and teachers alike especially if they are contemplating applying for a ham radio contact with the astronauts on the station.

Hutchison is the Australian ARISS Coordinator. His website in cyberspace at www.electric-web.org (VK5ZAI)

**

SPACE AND SCIENCE: CHINA ON THE BRINK

Space Daily reports that China is getting ready to launch its third unmanned spaceship. This, to pave the way for sending that nations first astronaut into space sometime next year. China is reportedly also in final testing and preparation to launch a new satellite dedicated to study ocean colors and related phenomena. (Space Dailey)

**

DX

In DX, 9V1YC reports that he and eleven other hams will be activating South Georgia and South Sandwich Islands in January and February of 2002. The operation will be strictly on the high frequency bands. Exact dates, call signs and QSL managers are not being made public until the group is actually on the air. The New Zealand registered vessel "Braveheart" of ZL9CI fame will be supporting this team for the entire 30 day trip. (RSGB)

A bit higher in frequency, Jeff Klein, K1TEO reports that December 6th was another great D-X day on the 6 meter band. Jeff who lives in Connecticut says over the VHFReflector that the band was open for a solid two hours beginning at 7:30 am local. And talk about D-X. On his very first C-Q he landed HB9QQ who was operating portable HB0. Even better, Jeff says that the fifth caller was 4X1RF. (VHF Reflector)

Over in Great Britain hams are actually D-Xing for charity. Jeramy Boot G4NJH, reports from Nottingham in the U-K.

--

Every year in September, the British Wireless Fund for the Blind -- a registered charity - organises a fund-raising event in which amateur radio clubs and individuals are sponsored for the number and distance of the contacts that they make. As of the 11th of December, the British Wireless for the Blind Fund reported that 'Transmission 2001' had raised £6681.48, with more coming in every day. They say that they hope the final total will reach £7000. The charity offers prizes to the club and individual raising the greatest amounts.

This year the Cray Valley Radio Society operating as GB2FB and taking part for the first time, won the prizes for the club raising the most money and for making the most contacts. Robert Guscott, M5GUS, operating as GB0WB, won the prize for the leading individual.

Jeramy Boot, G4NJH.

--

The bottom line. This is another way that hams can not only enjoy their hobby, but can help others at the same time. (G4NJH)

**

THAT FINAL ITEM: A HAM RADIO CHRISTMAS STORY

And finally this week, the story that we wait all year to tell you. Its the ongoing story of hams who care about hospitalized children and what they do to bring a bit of holiday cheer to those kids who cannot make it to the mall to spend a few moments with old Saint Nick. Here’s Amateur Radio Newsline’s Joe Moell, K0OV:

--

As most hams know, propagation is very good this time of year. It's so good that it's easy to make contact with the North Pole. Many clubs around the country are taking advantage of these propagation conditions to set up QSOs with a very special North Pole station. They're making these contacts from hospitals and rehabilitation centers, and they sound like this:

--
Santa and Kids Audio Here
--

That's what the North Pole Network sounds like in southern California, where it's celebrating its 25th anniversary at Childrens Hospital of Orange County. In the past few days, I've heard from other clubs in the North Pole Network, including the AkSarBen ARC in Omaha and the Southwest Missouri ARC in Springfield. And YOUR club could bring holiday joy to hospital patients. There's a how-to article on the subject, with a dozen suggestions for your best North Pole Network ever, currently running on ARRL's Web site. That's arrl.org, of course. And there's even more about North Pole Network in southern California, plus lots of photos showing a quarter century of holiday fun, at the Hospital Disaster Support Communications System Web site, www.hdscs.org. Check it out, and start planning for your own North Pole Network joy.

--

I don't know how to easily accomplish it, but you may want to put a line
filter on the tv.What you may be more able to do is to coil up the tv line cord
and put on one of those clamp on ferrite toroids. If that is not possible,
then if you can find a ferrite toroid with a center diameter big enough to
get the tv's two prong connector through, then you could coil a few turns of
the power cord up close to the back of the tv. You could also try moving the
tv line cord as far from the stereo as possible and see if the frequency of
turn ons goes down.

Steve WB4CZR

RF is magic and a royal pain!

Easy to do with the manuals. If you tackle it be sure to heat the coils a LITTLE bit to free up the slugs before trying to turn them. (I've been there)

Just put my P133 computer and Daytek 13" monitor next to my old rice box, the Yaesu FT-101E. Guess what? I have sync birdies and other crap all over the ham bands. This must be a common problem. Anybody got a solution? Also, my APC standby power unit contains an AC/AC converter that produces switching transients that appear as markers on the ham bands. Some have suggested that a FT101-E has a bandwidth one can drive a truck through but these types of man made QRM must be common. I have a very clean QTH as far as R.F. noise is concerned except for the above exceptions.

John

I know that Standard quit the amateur market, but I hear there are still some sources for parts.   I'm interested in a mic shell or complete mic for the 5718DA.

If anyone knows of a source, please post or email. Just change the "1000" to "100." It might keep one or two spammers out.

Thanks and 73.

Tom

I like the fact that it posted in the newsgroups. Some of us do not have
regular access to hear it.

Sure as hell beats most of the "bitching" posts we read here...........

There seem to be a bunch of email reflectors out there that supposedly are for discussing VHF and above, but none seem that popular with a narrow topic, so I am trying a new one that combines all VHF/UHF/SHF discussion on all modes. If you are interested in joining the email reflector, either visit http://groups.yahoo.com/group/vhfallmode or email vhfallmode-subscribe@yahoogroups.com with a BLANK email. Thanks for reading this!

Our local ARES group is planning for next years drills, and are trying to come up new ideas for it.One can do an earthquake drill only so many times before it becomes stale. Anyway, I would like to hear what ideas you might have for other drills that are different than the usual flood, earthquake, wildfire, hurricane, tornado, etc that are commonly used.

Thanks

John

Excellent condition, modified - works perfectly and no scratches, dents or dings. Includes stock mike, manual and priority shipping. $200 firm for postal money order. Am unloading attic and many items in the shack before 2002!

Contact me directly at radioears@aol.com as I rarely check "subsequent"
messages in the newsgroup.
THanks,
Harold

EBAY is officially expanding, register now and reach an entirely new
demographic. Market your merchandise to millions of new customers.
Make more money because there will be less competition (for now) and
you will sell things easier in this atmosphere. Don't Delay this site
is rapidly becoming popular and will soon be as popular as the parent
companys ebay.com

Looking for a Dow Key or similar TR relay with external contacts for receive muting. Prefer 110VAC coil but would take others if necessary. Must be in good working condition. Please reply with make, model, condition, and asking price.

Thanks!

Move the monitor away from the rig and the problem should improve. As for
the standby power supply, there are two potential paths for the
interference: conducted and radiated. If the interference is radiated,
moving it further away from the radio should help. If the interference is
conducted, you will need to use a powerline filter. Of course, sometimes
there is both conducted and radiated interference, in which case you will
find neither approach alone will work.

Not as the reason for the drill, but as part of the exercise, how about something that messes up RF propagation - major sun spots, some other type of EMP event, who knows what??? Anyway, insert simulated band outages - all of a sudden 2 meters doesn't work any more (or 6 meters, or 20 meters, or whatever), and it stays down/blocked for maybe 2 or 3 hours.

Just an idea ...

Carl.

Hi,

I've heard that these small 2m horizontal loop antennas (sometimes stacked 2 or 4 at a time) (also known as sqkloops?) are excellent for sideband. I see them offered for relatively cheap by KB6KQ(.com). However, my Dad and I are interested in building one for fun. Does anyone know if the plans for this type of antenna can be found in QST or in the Antenna book?

We are interested in using one or two of them for 2m SSB (we're just getting started).

Thanks for any help you can provide,

Jason

Here in UK we call them Halo's, basically a dipole bent into a circle,
or "squalo's' bent into a square, and fed with a gamma match.
I have seen some where the dipole is centre-fed and capacitivly tuned
between/across the ends.
Not too bad for horizontal mobile aerial, but down on a dipole.
Cardiac radiation pattern with null at the ends.

I have dimentions somewhere, but nothing too critical for you to fail
with 'cut and try' tuning. Shout if you want specifics and drawings.

hi jason
i dont know what your situation is but 2 meter SSB is not like FM it takes a lot

more than a simple unity gain antenna to be able to work SSB and it takes very good feedline and height the higher the better if you where going to be using the halo for mobile i would say go for it but for a base station do yourself a favor and get a good high gain yagi atleast 13 elements on a 15 foot boom feed it with a low loss coax say 9913F or LMR400 and get the antenna as high as possible around 50 feet would be good i have worked a good number of states here from florida with that height and 2 cushcraft 11 ele yagis
good luck

What model of GMRS repeater is being seen as best quality these days? The motorola hand helds look good as well. Looking for something for large scouting events. Hand-helds and repeater(s). We might put a repeater on a school other times.

I don't know what you mean by 'excellent' for ssb. The loops will not have any gain and are not directional. While you can have some fun with the loops, you should be looking at a beam on no less than a 10 foot boom and longer if you can support it. If you can stack 4 of the horizontal loops you may get close to 6 db of gain over a dipole. Not much to brag on when a 3 element beam will give around 8 or 9 db.
The beam will usually be easier to build and get working than several loops stacked and phased correctly. If you want to build something , the quagi type might be a good starter project for the antenna. It is a beam with the reflector and driven element made like square loops and

the director elements made like a regular beam.

Jason,
Ought to work just fine. Not just SSB, but AM, FM, CW
and what ever other mode you can think of.

>How this radio perform and are ther any good mods for this radio??

>This is for monitoring only...of course!

"No need for explanation or shame eagle, say it loud and proud. DXers
have ben modding ham rigs for extra channels ever since I was coming
up and the FCC doesn't care anyway. They long ago gave up on
enforcing. The only troublemakers you may run into are jealous no code
hammies who don't like to share their bands with us. Good luck and
good dx"

AMATEUR RADIO NEWSLINE(tm) REPORT #1272 - DECEMBER 28 2001

==

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast (for free).

==

Amateur Radio Newsline report number 1272 with a release date of
Friday, December 28th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A not so welcome FCC Christmas present for several hams and an ARRL survey says that most hams no longer want the novice bands. These stories are first on this New Years week edition of the Amateur Radio Newsline coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT: FCC DESIGNATES KEVIN MITNICK, N6NHG, LICENSE RENEWAL APPLICATION TO PUBLIC HEARING

A convicted computer hacker now has to face an FCC if he wants to keep his ham radio license. This, as the regulatory agency designates the Amateur Radio license renewal application of Kevin David Mitnick, N6NHG, for hearing. We have this report:

--

According to the FCC, Kevin David Mitnick is best known to the world as a hacker who admitted that he broke into a number of computer systems and stole proprietary software belonging to Motorola, Novell, Fujitsu, Sun Microsystems and other companies. He has also admitted using a number of means to commit his crimes including social engineering, cloned cellular phones ad sniffer programs placed on a victims computer system. Mitnick even acknowledged altering the programming of computer systems belonging to the University of Southern California and using these computers to store programs that he had misappropriated.

Mitnick was sentenced to forty six months in federal prison for his August 9th 1999 conviction. He had previously been sentenced to twenty-two months in prison for possessing cloned cellular phones after his arrest in North Carolina in 1995 and for violating his supervised release that had been imposed after his conviction for unrelated computer fraud in 1989. He is currently on probation following his release from prison in January of 2001. And in December of 1999, Kevin David Mitnick, N6NHG, applied for renewal of his Amateur Radio Station and his General Class Operators License.

His license expired on December 12th 1999. The FCC put the renewal application on hold pending further inquiry. Now the agency has made public that it intends to challenge Mitnick’s right to hold a ham radio license and has issued a Hearing Designation Order. In plain English, that means Kevin David Mitnick has to prove to the government why it should renew his ham ticket or have his license cancelled.

The FCC is challenging Mitnick’s license renewal request on the ground that his past criminal behavior raises a substantial and material question as to whether Mitnick possesses what the it terms as the requisite character qualifications to remain a Commission licensee. The FCC says that in the context of broadcasting licenses, it has long held that evidence of any conviction for misconduct constituting a felony will be considered as relevant to its evaluation of an applicant’s character. It also says that the broadcast character qualifications standards have been used as guidelines in the evaluation of non broadcast licenses including those in the Amateur Service and that the courts have upheld the Commission’s right to do this.

The agency cites two recent cases. That of Herbert L. Schoenbohm, the ex-KV4FZ and Leslie Brewer who used to be KC4HAZ. Brewer, also known as the Tampa Party Pirate lost his ticket because of his unlicensed broadcasting in the commercial F-M band . Schoenbohm lost his based on a fraud conviction of using an unauthorized telephone access device. And the FCC says that any conviction for fraudulent conduct calls in question a licensee’s ability to act in a manner consistent with FCC regulations.

And so the FCC has ordered that a hearing be held before an Administrative Law Judge to determine the effect of the criminal convictions of Kevin David Mitnick on his qualifications to be a Commission licensee. It also says that pursuant to provisions of the Communications Act, the burden will be on Kevin David Mitnick, N6NHG, to provide proof that his license renewal application should be granted. Mitnick was given 20 days of the mailing of the Hearing Designation Order to file a response.

For the Amateur Radio Newsline. I’m Andy Jarema, N6TCQ.

--

The hearing designation order on Mitnick’s license was adopted by the Commission on December 11th but not released until Friday, December 21st. Ironically, less than twenty-four hours earlier, Mitnick had made a guest appearance on Art Bell’s Coast to Coast A-M where he discussed his future plans. At that time he was apparently unaware that the FCC had some plans of its own in regard to whether or not N6NHG will remain a radio amateur and Commission licensee.

The complete text of the Mitnick FCC Hearing Designation Order is on the web at: http://www.fcc.gov/Daily_Releases/Daily_Business/2001/db1221/fcc01359.txt (FCC)

**

ENFORCEMENT: GERRITSON LICENSE PLACED ON HOLD PENDING POSSIBLE HEARING

Kevin Mitnick, N6NHG, is not the only person hearing from the FCC in recent days. So have a number of others including another Southern California resident who could face the same kind of a hearing. Riley Hollingsworth, K4ZDH, is the FCC’s Special Counsel for Amateur Radio Enforcement:

--

Hollingsworth: “We notified a Bell California licensee; Jack Gerritson, ex-KG6IRO, that the Wireless Telecommunications Bureau, had set aside his Technician grant so that a recent conviction for radio interference could be evaluated. Now, he has no authority to operate Amateur Radio equipment until the matter is resolved.”

--

The action to place Gerritson's license up for hearing was taken November 14, 2001 and is based in part upon complaints about the operation of his station and questions regarding Gerritson's qualifications to be a Commission licensee. The FCC says that both issues were raised as the result of Gerritson's 1999 arrest and year 2000 conviction for interference to police radio communications. (FCC)

**

ENFORCEMENT: FCC REOPENS KY-W.VA REPEATER CASE

The FCC is also continuing its crackdown in the area of repeater interference issues. In fact it is taking a second look at a coordinated versus uncoordinated issue in the Tennessee and West Virginia border area. Again, Riley Hollingsworth, K4ZDH:

--

Hollingsworth: “We notified parties in a repeater dispute in West Virginia that we would be reopening that case after information that one of the repeaters is coordinated after all. We had declined to intervene earlier this year in that case.”

--

The letter stating that the FCC is reopening that case went to Michael Horn, KB8GDF, of Lenore West Virginia, Kenneth Brown KF8HL of Davin West Virginia and Carl Tussey, KB4UCE of South Williamson Kentucky. Back on January 24, 2001, had notified the three that it had received a complaint that they were operating an uncoordinated repeater on 145.390 MHz in Mingo County, West Virginia, and that this repeater was causing interference to the coordinated KC8FKP repeater operated by the Portsmouth Radio Club that uses the same frequency. The matter was closed when the FCC interpreted a notation in the South-Eastern Repeater Associations Repeater Journal that the status of the KC8FKP repeater was not known and interpreted this as meaning that the repeater was also was not coordinated.

But now the FCC says that it has recently come to it’s attention that although in the SERA Repeater Journal says that the KC8FKP repeater may be listed as unknown, it is still a coordinated system. Therefore, the FCC is re-opening its review of the issues in this matter. (FCC)

**

ENFORCEMENT: IS A GOVERNMENT AGENCY RUNNING A HAM REPEATER?

Is a government agency operating ham radio repeaters in violation of Part 97 rules? Specifically, the FCC wants to know who is really running the KD6LSO and W6SON repeaters in Sonoma County California.

The FCC says that it has received allegations that the county is in charge not the hams whose call signs appear on the machines. Since a county governmental entity cannot be an Amateur licensee, the FCC is collecting information in order to determine if there are breach of its rules. (FCC)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including Rocky Mountain Radio League repeaters serving Denver and Bloomfield Colorado.

(5 Sec Pause Here)

**

RESTRUCTURING: ARRL STUDY SAYS NOVICE BANDS MAY NOT BE NEEDED

An ARRL study group has recommended doing away with the current novice bands and divvying them up among the remaining licenses classes. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

An ARRL Novice Spectrum Study Committee has recommended that the League petition the FCC to eliminate the CW novice subbands. It also wants a rules change that will allow Novice and Technician licensees with element 1 credit to be permitted to operate Morse code on the General 80, 40, 15 and 10 meter C-W allocations at up to 200 watts power out.

These are just two of the suggestions contained in a report that will be presented to the Leagues Board of Directors when that group convenes in mid January. The study committee will also suggest recognizing portions of the 80, 40, 15 and 10 meter Morse bands for what it calls ''slow CW operation.'' The committee says that this would aid new operators in enhancing their Morse code skills.

Finally, the panel also recommends re-farming -- that's another way of saying reapportioning -- reapportioning the current Novice and Tech Plus subbands in part. This, to allow expansion of the phone allocations on 80, 40 and 15 meters.

What will the ARRL Board of Directors do? We should know in less then a month.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP

--

The committee's determinations were based on opinions expressed by 4744 hams who respond to an ARRL Novice Spectrum Study survey launched last June. Those expressing their opinions included ARRL members and also non-members. What's really interesting is that nearly 61% of those responding were Extra class licensees. (ARRL bulletin)

**

FCC INSPECTOR GENERAL'S REPORT: THE NAMES THE SAME

The latest report of the FCC's Office of the Inspector General contained very few items of intrigue. But according to the C-G-C Communicator, one of the more colorful incidents involved a person who allegedly used the name of an FCC employee to obtain the government-rate for a hotel room in conjunction with a government-sponsored event.

Well, it turns out that the subject was legitimately attending the event, was entitled to the government room rate and just happened to have the same name as the FCC employee. The bottom line: Case dismissed.

The complete report is on the FCC website at http://www.fcc.gov/oig/Semiannual093001-1101.pdf (CGC Communicator)

**

AMERICA AT WAR: NYC PHONE SERVICE STILL SPOTTY

It's been almost four months since the attack on the World Trade Center, and telephone service near ground zero in lower Manhattan is anything but normal.

According to news reports, repair people have restored service to most customers, but thousands of lines still aren't working. As a result, customers complain that some business lines can call out, but customers can't call in.

The collapse of Seven World Trade Center crushed thousands of underground cables at Verizon's nearby switching station. About 200-thousand telephone lines and three-point-five million data circuits were affected. The company says it'll spend as much as one-point-nine billion dollars to repair the damage. (Telecommunications Online)

**

INTERNET SECURITY: PROBLEMS WITH XP

If you just bought a new computer equipped with the Microsoft X-P operating system, or have upgraded your old one, listen up. The Federal Bureau of Investigation says that you should take certain steps to protect yourself against hackers who might try to take advantage of major flaws that have been found in X-P.

The bureau's National Infrastructure Protection Center says that in addition to installing a free software fix offered by Microsoft on the company's Web site, consumers and corporations using Windows XP should disable the product's universal plug and play features as well. The FBI also warned computer system administrators to actively monitor for specific types of Internet traffic that might indicate an attack was under way.

The FBI did not provide detailed instructions how to disable plug and play. Outside experts also caution that disabling the affected Windows XP features threatens to render unusable an entire category of high-tech devices about to go on the market. This includes a new class of computer printers that are easier to set up. But the same experts also acknowledge that disabling plug and play in X-P could afford some protection against similar flaws discovered in the future.

Microsoft considers disabling plug and play options as being unnecessary but the company does acknowledge that Windows X-P suffers from serious problems that can let hackers steal or destroy data files across the Internet or implant their own unwanted software. The FBI says that the glitches were unusually serious because they allow hackers to seize control of all Windows X-P operating system software without requiring a computer user to do anything except connect to the Internet. (Published news reports)

**

THE LAW: A FIGHT AGAINST GRAY MARKET ELECTRONICS

A group of American high-tech companies is opening the year 2002 with a campaign to protect consumers from unwittingly buying consumer electronic products intended for foreign markets. Electronics that the manufacturers claim may not work in the United States.

Compaq Computer is one of the companies involved in the campaign. It says that the group will warn consumers about the dangers of buying such products, and how to avoid getting duped. The other companies in the group are Hewlett-Packard, 3 Com, Nortel Networks, and Xerox. The effort may prompt more lawsuits against distributors who resell so called gray market items in the United States. (Computer Products Daily)

**

SPECIAL EVENTS: USS ARIZONA K7A A SUCCESS

Steve Gurley, KJ7WK the coordinator of the USS Arizona Special Events Station K7A tells the Amateur Radio Newsline that the event was an overwhelming success. Gurley says that the memorial station contacted amateurs in all 50 states, and 8 other countries while handling over 2600 QSO's. In fact says KJ7WK, the sponsoring group has already received certificate requests from 609 stations as we go to air. There were ten operators in three counties in the Phoenix Arizona metroplex operational during most of the three days K7A was on the air. (KJ7WK)

**

SCHOLARSHIPS: DARA SCHOLARSHIPS FOR 2002

The Dayton Amateur Radio Association says that the nominating period for its annual scholarship program is now open. The deadline to receive applications is June 1, 2002 and the announcement of winners will occur around June 15, 2002. Applications are available from the DARA Scholarship Committee, 9873 Lower Valley Pike, Medway, Ohio 45341. Please note that this is a new address from years past. Again it is the DARA Scholarship Committee, 9873 Lower Valley Pike, Medway, Ohio 45341. Also, for more information on the Dayton Amateur Radio Association and its programs, please visit www.dara-w8bi.com on the world wide web. (DARA)

**

AWARDS: DARA OPENS NOMINATIONS FOR HAM OF THE YEAR

The Dayton Amateur Radio Association also asks that we remind you that the nominating period for the 2002 Dayton Hamvention Awards is now open. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations should be sent to Post Office Box 964, Dayton Ohio 45401. They can also be submitted by completing the e-form on the web at www.hamvention.org. (DARA)

**

CHANGING OF THE GUARD: BADGER STATE SMOKE SIGNALS EDITOR JIM ROMALFANGER, K9ZZ - SK

I'm Bill Pasternak, WA6ITF.

The ham who put the state of Wisconsin on the ham radio map has passed away. This, with word that Jim Romelfanger, K9ZZ died Saturday evening December 22nd of an apparent heart attack..

According to Romalfanger's close friend Ken Ebneter, K9EN, Jim has been in declining health for some time. Romalfanger had a stroke a few weeks ago, affecting his right arm which was already weakened by polio. But Ebneter says that K9ZZ seemed to be improving until just recently. Ebneter says that Romalfanger had been in the hospital early last week but was home when he passed away of an apparent heart attack. In fact, K9ZZ had stopped by to visit a ham radio friend that afternoon. Another friend found him dead that evening when he stopped by to visit.

His full name was Arthur James Louis Romelfanger but to the world of ham radio he was Jim, K9ZZ. And Jim Romalfanger made Wisconsin a ham radio household word by editing as three decade state-wide ham radio monthly newspaper called Badger State Smoke Signals -- and doing so as a volunteer.

Notice we said newspaper and not newsletter. This is because Smoke Signals is just that. A newspaper that at its peak ran up to 40 pages filled with articles about ham radio in the Badger State. In addition to being the 32 year editor of Smoke Signals, Romalfanger was nationally published over the years in CQ, QST, 73, Ham Radio, Popular Electronics, and other magazines.

Jim Romalfanger was first licensed January 1958 in Pacific Beach, California, as KN6LWB. Upgraded to General in May of 1958. He returned to Wisconsin that summer and became K9PKQ. In 1977, changed call to K9ZZ and held that call sign the rest of his life. Funeral services were scheduled for Friday, December 27th at St. Joseph Catholic Church in Baraboo Wisconsin.

Jim, from all of your friends at the Amateur Radio Newsline: We are going to miss you. (The Baraboo News Republic, K9EN, WB9QZB, and other friends of K9ZZ contributed to this report.)

**

AMAZING DISCOVERIES: CIRCLES WITHIN A CIRCLE

One of the most curious pure mathematical discoveries for 2001 was announced in the easy-to-read article at an incredibly long website. In brief the article says that research has led to some remarkable geometric findings involving interrelationships between tangent circles and spheres. In other words, mysterious circles within a circle.

As one researcher put it, "Where do these numbers come from? What's going on here?" Find out by going to www.sciencenews.org/20010421/bob18.asp (CGC Communicator)

**

INTERENATIONAL - CANADA: NEW ALBERTA SM

On the international front, word that Thomas Martens, VE6TRM, has been appointed the new Radio Amateurs of Canada Section Manager for the province of Alberta and the North West Territories. Martens replaces Alan Faint VE6QQ will be stepping down from the position due to personal reasons. Martens will serve the remainder of Faint’s term which runs through June 30th, 2003. (RAC)

**

INTERNATIONAL-AUSTRALIA: CSIRO MICROTURBINES

Australian hospitals, restaurants and schools could soon source clean, reliable energy from mini power generators that operate independent of the main grid. This as CSIRO has installed Australia's first commercial microturbine, at their North Ryde Laboratory, Sydney.

The size of a small refrigerator, the turbine produces 30 kilowatts of power, independent of the electricity grid. And it does this with reduced greenhouse and other gas emissions. Thirty kilowatts is enough to power a medium commercial building such as a restaurant.

Along with fuel cells, gas engines, storage technologies and some renewable technologies, microturbines can be used to generate power close to the end-user and provide major gains in reliability and power quality. Once the design can trickle down to the home user level and price range, it could offer hams a way of always having emergency power always at hand. (Q-News)

**

SHORTWAVE MONITORING : RADIO NORWAY CLOSES

The Board of Directors of the Norwegian Broadcasting Corporation has decided to stop its own programs by Radio Norway International. This is effective as of December 31st of 2001.

According to DF5SX and G3VGW, Radio Norway’s final show was hosted by veteran broadcaster Einar Lie on New Years Eve. Also, the 1200 kilowatt Medium Wave transmitter on 1314 kHz on Kvitsoy was supposed to cease operation by December the 31st as well.

The Norwegian Broadcasting Corporation will have to negotiate with transmitter providers Norkring and Radio Denmark to close down as well. The Norwegian Broadcasting Corporation and Norkring have a contract for running the transmissions that goes through December 31st, 2003.   The agency also has a leasing agreement with Radio Denmark for the same period.   (Media Network)

**

DX

In D-X, keep an ear open for King George Island in the South Shetland group. HFZ0POL is reported on all H-F bands, including the newer ones, using CW, SSB, RTTY and PSK31. QSL HF0POL via SQ5TA.

And the United Arab Emerates has been heard lately A61AJ. He has been QRV on 40 meters CW around 1400 UTC.   Q-S-L A61AJ via N4QB. (Various DX sources)

**

THAT FINAL ITEM: RILEY SAYS THANKS

And finally as the year 2001 comes to an end, the FCC’s Chief Rules enforcer, Riley Hollingsworth has some words of praise for the ham radio community. He passed them along through his bi-weekly Enforcement Log at www.rainreport.com, and thanks to them, we have is words for you:

--
Hollingsworth: “I would like to point out Hap, that this is the end of the third year of Amateur Radio enforcement and I will honestly say that the overall level of compliance in the Amateur Radio Service is outstanding. The Amateur licensees do a great job and they do a great job of showing that the Amateur Radio Service is -- indeed -- the only fail-safe communications system in the world and we are very proud of them.”
--

And if I can take off my reporters hat for a moment and editorialize a bit, I guess I speak for many who truly appreciate what you have done to return the

Amateur Radio bands to the law abiding members of the nations ham radio community. (ARNewsline(tm), RAIN)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying Happy 2002, God Bless America, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2001. All rights reserved.

Hi

Selling my Yaesu FT-847 hf-vhf-ufh radio.. Located in Perth, Western Australia but quiet willing to ship internationally to anyone who is looking for an as new rig. This rig would suit new buyer as it is unmarked or modified in any way apart from having 2 Collins mechanical filters fitted.
Comes with original box, manual, mike etc.. Have an MD-100 which I will also sell once the radio goes.

Open to serious offers.
Please if you are outside Australia please let know so I can work out the exchange rate etc..

You are correct, but like the merchants I just said db and left out the i. Also maybe I should have added in the ground reflection that one of the vhf merchants use and get about 6 more db.. The whole point was that a small beam is easier to construct and match than it is to build and phase several horizontal loops. Especially for a beginner.

I use one from M2 on my truck, along with 150 watts and have no problem
talking to bases with horizonal beams a few hundred miles away.  A
horizontal beam for the base will work better if you don't need to hear in
all directions at the same time.

I can't find the plans now, I did have them bookmarked,
and the website told you everything you needed to build
the loops. But- like you're finding out, they're not
necessarily for base station use. In mobile use, however,
that's the best thing going. Do a search on the 'net for
"build a loop antenna" and you'll probably get back a
couple of the sites I found. Make sure the search request
is in quotation marks, or you'll get back a bunch of junk.

New owner of ICOM 706 and novice amateur needs some advice...

As I understand my owners manual the ICOM internally switches between its
two antenna connections at around 60MHz. However, I'd like to use only one
antenna on my vehicle but still have full advantage of the 706.

So, I guess the question is, How do I best do this? Would most likely want
to focus on 2Meter band. Don't want elaborate (expensive) antenna and tend
to like the Firestik line style or similar.

Thanx,
Bob
Rochester, NY

For a whole whopping 1/2 S-point more gain the larger yagi's only good point is its nulls and F/B ratio to put some noise in.

I agree that the 3-el yagi is a well known design and will work as advertised using any of the large number of mechanical and matching designs out there, where as the horizontal loop is pretty uncommon in the books.

I'd build the loop though, it is much smaller physically which I can use in my limited space and I like fooling with 'exotic' designs, even if I shoot myself in the foot a few times, it is all the more fun that way.

A quad might be a good compromise.

if you want to use only one multiband antenna you will need a duplexer to split and combined signals but if all you want is 2 meters then you dont need to worry about it just run the 2 meter antenna to the 2 meter port on the 706

rljames wrote:

Yep. Ferrite beads on everything coming out of the computer.

I don't know about the APC unit. I have never seen that problem.

if you dont have an antenna connected to the HF/6 meter port you wont hear anything on those bands i dont know if anyone makes a duplexer for HF/6/2 there maybe one that does 6/2

so the best way is just run 2 different antenna mounts and antennas thats what
i have done i have a mag mount for 2 meters and i use the hustler resinators
for HF and 6 meters
good luck

: Yep. Ferrite beads on everything coming out of the computer.

: I don't know about the APC unit. I have never seen that problem.

No, nobody else has ever had this problem. We're all glad you reported it, though. ;=)

Seriously, distance and shielding are the best cures.

Put big toroids on the APC's input and output, as close to the case as you can get them. That'll keep _them_ from radiating those switching transients via the cords. Consider putting some (? unpolarized) electrolytics between the hot (and neutral?) lines and the chassis of the APC, inside the case, if there's room and it's out of warranty.

Make sure the computer case is _closed_ tight, and that you have good metal-to-metal contact all around the sides and back. You may wish to add a conductive mesh gasket to each side door, or some such. Use metallic tape or (for empty card slots) slot filler plates to block all holes in the back that aren't used for cooling. Perhaps conductive screening over the fan, bonded to the case all around the edge of the screen, would help and not interfere materially with airflow.

With the above done, the front of the computer probably will leak more than any other part -- except maybe the power supply. I have some ideas on how to fit a hinged screen door around the front of the case, with metal-to-metal contact all around, but they're fairly obvious. If you do something like this, finger stock or a conductive gasket may be useful.

The next step is to get a Tempest-rated PC, KB, mouse, and monitor. Pity they're not available to civilians on an unrestricted basis.

Others may have different ideas, and I'm interested in them.

Dear HAM radio enthusiasts,

Our company provides quality QSL printing service for� affordable prices. Please visit our site to see what we� have to offer. Read testimonials and have a look at the� great QSL design we have. Should you be interested in receiving more information about our serivce - do not� hesitate to contact me at ua1oms@quadrat.ru or visit http://www.quadrat.ru/qsl/index.html

Look forward to hearing from you soon.

VY 73 es GL!

I have done some work in designing simple antennas for emergency communications on 2-Meters.

This is a link to my Ham page: http://people.ne.mediaone.net/buck0/hampage.htm
It contains designs for 4 different 2-meter collinear antennas, a 2-meter SSB Halo, and some information on Go-Kits.
The ARRL Website also has a link to this page located:
http://www.arrl.org/tis/info/Yagi-V.html

This HALO design is not ground dependent and can be mounted atop a section of PVC. See comments! Easy to build. Cheep$$$

Some of my antenna designs are posted on the Erie County Chapters of ARES and RACES Website:
http://hamgate1.sunyerie.edu/races/antenna.htm
The ARRL Website also has a link to this page located in their Technical Information Pages: http://www.arrl.org/tis/info/JPole-V.html

Have fun building!

I see them offered for relatively cheap by KB6KQ(.com). However, my Dad and I are interested in building one for fun. Does anyone know if the plans for this type of antenna can be found in QST or in the Antenna book?

Radius M 1225 (comm. radio) mobile radio on moto software rejects any freq. "out of band" . Is there a key board by-pass to force it to accept a slightly out of band freq like a lot of the ge hand helds and mobiles. GE'S use a 2 keystroke together on key board to bypass the software check.

Any help out there

ck@iglou.com

Thanks.

The tuner in the 450 is only a "line flattener" of sorts. It's not made to handle wild mismatches. It's made to give you a wider usable bandwidth when using antennas that slighly vary from a 1:1 match. "50 ohms non reactive" I wouldn't want to use it for much over 3 to 1 mismatches. . You will need an outboard tuner with provisions to handle balanced lines if you want to run ladder line. You can see SWR up to 80 to 1 or worse in some cases of ladder line fed dipoles, etc. The 450 tuner will not handle this. Also in cases where the 450 tuner is matching a load that is borderline on it's capabilties, it will run hot. You can smoke parts. Not cheap at to fix all on these new radios out. In some cases, the tuner will search and search which can lead to damage.
BTW, if you decide to buy a tuner for ladder line, get the biggest one you can afford. The bigger ones can handle power for future uses, and they generally have lower coil losses as the coils are usually a bit better. My present tuner for this type of use is a MFJ-989c. It's not the best in the west, but it gets the job done. It can handle a bit of power and uses a roller coil which I prefer. The balanced output is thru a large balun, which might not be the best way to go compared to a true balanced tuner, but I find it's good enough for gov work. Just always use the least inductance needed to get a match for the lowest coil losses. MK

Has anyone experienced problems with the TS450 once the on-board 'memory backup' battery dies???

I can understand losing the memories and even having to reprogram the 450 to 'remind' it that it has optional filters, but it seems to forget that it also has an auto-tuner built-in and changing the 'power up' settings don't make the problem go away.... WIERD!

Hiya,

I haven't been on the air for a while but last time I was on there was a similar setup on 70cm band via some sort of repeater linkup, I managed to talk to someone about 50 miles away from me (I'm in VE3 land) and another ham in San diego.

Is digital communications on amateur radio dead? Here in Ottawa, packet radio was alive and well back in the 90s. There was even a packet interest group that met regularly and established a 56kbps network in the area using homebrew equipment. However, as the 90s drew to a close, the curtain fell on packet radio and it is virtually dead here, although ARPS has sort of taken over.

In my mind, packet radio should have evolved into an amateur radio web with mail servers and web servers on 2 meters and up in a network similar to the voice repeater network.

I fear that ham radio has ceased to keep pace with communications technology as it did back in the old days. For example, we don't seem to be venturing into any of the digital voice modes. As I mentioned earlier we tried but gave up on constructing a data communications infrastructure using JNOS and AX.25 as the starting blocks. There has been alot of work done in the past on video such as SSTV and FSTV but these technologies didn't become mainstream. To date, the hobby remains analogue voice oriented.

It makes me wonder if ham radio will truly become endangered in the near future. Will growth rates suffer? Will people fail to develop an interest in the hobby as the internet becomes more sophisticated and offers more features? Is there anyway ham radio get back into the digital game?

73, Ed

It was, until interest started to die probably due to the internet (at least
```

that's where the blame has been placed).

As for PSK31 - Great means of low power communication over great distances
for two hams. Ever try a three way? And do you think that there will ever
be a network for traffic handling via PSK31 as there was with packet?

PSK31 is interesting - but it's just one mode (which
few hams really understand), far from the technological
development that could have happened so easily.

There are parts of the world which have megabit packet
and play with things like digital ATV. Why it should work
in S5-land, but not in, say, North America, remains a
good question...

I believe this was invented by Leon Theremin and used to bug the old
US Embasssy in Moscow. As far as I can remember, it consists of a
dipole antenna (or perhaps a cavity resonator?) loaded by an integral
capacitor microphone. Reflected waves are modulated by the varying
capacitance, and presumably received by some kind of detector. Must
have used UHF or microwaves.
Try a web search on "Leon Theremin" or "bugging devices" or similar.
I hope this may help.

Hi all,

This email is to advise all users of an imminent price increase for ACARS Log Analyser for Windows.

We have maintained the low price of �17.50 for a number of months now, but due to the time required to maintain and improve the program, it is necessary to revert to the original price of �29.99.

The current offer price of �17.50 will expire after the 21st November, 2001, so if you register at this price, please do so before the 21st.

The price increase will allow us to continue development of the program and continue to add the numerous user requests that we have received.

Current planned features are:

* DDE support from all existing decoders
* WACARS support
* Route plotting

Thanks to everyone who has so far registered and rest assured that your support will ensure the continued development of the program.

Thanks,

Mark Avey

Not so much a communications mode, more a social disease.
Thankfully, with modern antibiotics, it can be rapidly cured.

If you are interested in learning how a well-run emergency net operates, or in sharing a demonstration of how public service ops are conducted with a non-ham, I invite you to listen to Oakland County, Michigan ARPSC's recent Simulated Emergency Test at

http://www.live365.com/stations/245298

The test had several simultaneous disaster scenarios, including winter weather, a plane crash, traffic accidents, and a hostage situation. The Hams involved were very professional, and the test went as smoothly as one could hope.

For more information on Amateur Radio, including links to study materials, exam information, and links to Michigan clubs and service organizations, check out

http://www.michnews.net/hamradio

It would be interesting to know why digital communications has not taken a
bigger role in ham radio, especially when a data comms network was built,
then people stopped building it.  Even the voice repeater network has
developed gateways to geostationary satellites (IPARN in Canada) and now
repeater gateways into the internet for range extension.  So this network
continues to be popular and evolves.

But is this enough to ensure the future well being of the hobby?  This would
make a good study for amateur radio organizations to come to grips with.
I'd love to know what the pioneers of packet, JNOS and AX.25 think of all of
this.

Hi Brad,
I have owned both ... and still do. One in the truck and one at the
base. Both units have operated just fine. I have 2-220-440
configuration in both.
73,
Pete

Just bought two used amps at a Hamfest- a Alinco ELH-230g and a Mirage B23a. Can't seem to find much info on them anywhere. Anyone happen to know anything about them? I'm interested in output, preamp, sensitivity, and so on. Especially interested to know which one you would choose if the other were to go to your buddy to get him mobile. We're going to be using HT's via these amps, to get mobile, if that makes a difference.

Yes I know mobile units function better than this setup- but I'm not going to buy a mobile unit just yet. For the time being, the idea of having a chassis mount BNC connector mounted in my center console with a 2' pigtail to go to my HT <which will sit in my center console cupholder>, going to a speaker mic and a 5/8 wave permanent-mount antenna on the roof really appeals to me.

Thanks in advance!

Hi
I just finished a qrp kit and the test involves hooking up the rf out to a dummy load.
The handbook and the antenna book I have are no help at all.
Can anyone suggest a simple qrp 50 ohm dummy load ?
How about a 50 ohm resistor?

Tnx
Wayne

Yes, a 50 ohm resistor will work, as long as it is capable of handling
whatever the power output of your rig is. If you have a one watt output,
then you need a 1 watt resistor.

Commercial dummy loads are essentially nothing more than a resistor with a
heat sink built around them and a proper connector.

Good luck.

Carl.

I have an Alinco DJ-S41T 440 mhz mini handheld for sale.  This is the
300 milliwatt cigarette pack sized rig (not the flimsy credit card sized

one).  It works 100%.  I regularly use it on a repeater some 5 or 6
miles from here and can hit that repeater solid from up to 20 miles.
This is a great radio for simplex use at hamfests or doing work on your
towers and antennas.  The case is worn from many hours in my pocket, but

nothing wrong with it that affects operation in any way.  No
accessories, just the radio.  For more info on this model, check out:
 http://world.std.com/~wdr/alinco.html

Asking $50 plus shipping (s/b about $4.00).

A dummy load is just a resistor that is big enough to handle the power.
If the rig is say about 1 to 4 watts out then a # 47 light bulb can be
used. It will change brightness as you tune the rig.

If you do not have a resistor of around 50 ohms then you can make one
out of several higher value resistors just so that they are equal in
resistance and wind up around 40 to 60 ohms. Do not use the wirewound
ones just the old fashion carbon resistors.

I've alway been told that using a lightbulb is a bad idea, as the filament
changes resistive properties as it heats up. Any input to that?

The lightbulb is not a perfect dummy load and should not be used with a wattmeter to give accurate measurments. Just to test a rig to see if it is putting out power anywhere near the expected range they are fine. The solidstate rigs might have trouble with the lightbulbs but if used for a very short time they should be ok.

AMATEUR RADIO NEWSLINE(tm) REPORT #1265 – NOV. 9, 2001

Amateur Radio Newsline report number 1265 with a release date of Friday, November 9th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio leads the way at the New York City Marathon. This story is first on Amateur Radio Newsline report number 1265 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO AND SPORTS: - THE NEW YORK CITY MARATHON

Ham radio was once again at the start and finish -- and all along the route of this years 32nd running of the New York City Marathon. This years event was held Sunday November 4th and was dedicated to victims of September 11th terrorist attacks. Its theme -- “United We Run.”

The starting line was at the Staten Island Side of the Verrazano Narrows Bridge. According to Stew Seit, WA2JNF, who was assigned there, it was a moment of total patriotism:

--

WA2JNF: “On the bridge waiting for the cannon to go off, everyone began singing patriotic songs. It would brng a tear to your eye. There were 30,000 people singing. It was something to be seen.”
--

But Seit and almost 500 other hams were there to provide communications for the event. And according to WA2JNF, even though there were lots of cellular phones, it was ham radio that was the communications backbone once again:

--
WA2JNF: “Everyone was running around with digital radios, Nextel’s, cellular phones. But when the need came to get the message through they turned to us hams. Regardless of how many cell-phones or trunked radios they have tied around their necks, when the message was of priority nature, and they wanted to make sure it got through, they spoke to one of the hams who was handling the communications and we got the message through”
--

The crowd lining the route was estimated at more than two million. Many were waving small American flags in memory of the thousands killed in the terrorist attacks.

ARRL Hudson Division Vice Director Steve Mendelsohn, W2ML, heads up the the ham radio communications for the Marathon. In fact, he has been organizing the ham radio effort ever since Amateur Radio became a part of the event many years ago. He says that for him, for the group of Amateur Radio volunteer communicators and for the people of the Big Apple, this years New York City Marathon was like none ever before:

--
W2ML: ”It was truly a celebration of life. It was a way of saying to the

terrorists: ‘look -- we are going on with our lives. You didn’t stop us. On the contrary, you united us.’ “

--

Tesfaye Jifar of Ethiopia set a record in winning the mens catagory. He ran the 26.2 mile course in 2 hours, 7 minutes, 43 seconds. The old record of 2 hours, 8 minutes and 1 second was set in 1989. And as Jifar broke the record it was a corps of ham radio operators that guided him -- and the 30,000 other competitors in the New York City Marathon -- to a safe completion of this years run.

More on the Marathon is on the web at www.nyrrc.org. Our complete interview with Steve Mendelsohn W2ML can be downloaded from our FTP page by clicking on the newscast number at the top of the www.arnewsline.org home page. (ARNewsline(tm))

**

RADIO AND SPORTS: THE SANTA CLARITA MARATHON

Sunday November 4th also saw another Marathon where ham radio played an important role. This one took place in Amateur Radio Newslines’s own back yard. It was the Santa Clarita 5 K Marathon and featured ham radio as it primary communications. Take a listen:

--
Audio Here
--

About three dozen hams from the Los Angeles County Disaster Communications Service and the Santa Clarita Valley Amateur Radio Club provided this years communications support. Most of it was on two meter F-M using the 146.79 MHz W6JW club repeater.

--
Audio here
--

The Santa Clarita Marathon may take place in a Los Angeles suburb, but it is by no means a small event. Several thousand runners take part and its course is USA Track and Field certified. In fact, this event is a qualifying race for the famed Boston Marathon.

More information on the event is at www.scmarathon.org. The Santa Clarita Amateur Radio club’s home in cyberspace is www.w6jw.org. (ARNewsline(tm))

**

TECHNOLOGY AND RADIO RULES: FCC PUTS KENWOOD "SKY COMMAND" PETITION ON PUBLIC NOTICE

Turning to regulatory matters, the FCC has put a rulemaking petition from Kenwood Communications Corporation requesting that the government relax restrictions on Amateur Radio auxiliary station operation on public notice. Amateur Radio Newsline's Bruce Tennant K6PZW has the details:

--

The FCC assigned the rulemaking number RM-10313 to the petition in which Kenwood asks the government to permit hams to use control methods like its own Sky Command radio remote system.

According to the ARRL Letter, Kenwood's Sky Command lets a user control a fixed location High Frequency station using a pair of dual-band VHf/UHF transceivers on frequencies in the 70-cm and 2 meter bands. Kenwood wants a change in Part 97 rules that would expand permission to operate an auxiliary station on all 2-meter frequencies above 144.5 Mhz, except on 145.8 to 146.0 MHz.

And while not mentioning Sky Command by name, Kenwood says that the proposed rule change would allow the development and use by amateurs of new technology devices and increase the utility of the limited amateur allocations. Current FCC rules limit auxiliary operation to certain frequencies above 222.15 MHz.

In July 2000, the FCC declared that use of the Sky Command did not comply with Amateur Service rules--specifically Section 97.201(b). It also declined to grant a waiver make it legal. The ARRL commented in opposition to Kenwood's earlier efforts to have the system eclared to be in compliance, and it refused to permit Sky Command advertisements to be published in its QST magazine.

In its Petition for Rule Making, Kenwood asserts that auxiliary operation is poorly defined and significantly overregulated in the FCC rules. Kenwood also argues that present limitations on auxiliary operation no longer are appropriate in today's amateur environment and should be withdrawn.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

Again, the Commission has assigned the rulemaking number RM-10313 to the petition from Kenwood. Those interested may view and comment on it via the FCC's Electronic Comment Filing System. (ARRL)

TECHNOLOGY AND RADIO RULES: DIGITAL WIRELINE REMOTE BASE OPERATION BEING TRIED IN THE UK

A British ham radio operator has been granted permission to experiment with a digital wireline multi-band remote-base system. The experimental station was made possible by combining a popular H-F transceiver, the support of the national ham radio society and a cooperative government regulatory agency. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

Dave Gould, G3UEG, has received a Notice of Variation as a Special Research Permit to set up an HF station that is remotely controlled over the telephone network. This has come after 16 months effort liaising with the RSGB Licensing Advisory Committee and the Radiocommunications Agency and has been finally approved after a site inspection. The system is based on a Kachina 505DSP transceiver and Kachina's own specially-designed remote control system. The audio is digitised and then multiplexed with the control signals. The resulting single data stream is encoded and then passed over the telephone network using standard modems. At the remote end the data is decoded and the audio is split from the control signals and passed to the transceiver. The system will operate at a line speed of 28K or better and includes strong security, failsafe and shut-down measures.

Jeramy Boot, G4NJH
--

While we in North America take wireline and radio remote-base operations for granted its new to many other parts of the world. Anyone interested in receiving further information or with ideas to assist Dave Gould, G3UEG, may contact him by e-mail at david.gould@btinternet.com (RSGB)

ATTACK ON AMERICA: COMANDO SOLO DOES NOT WANT RECEPTION REPORTS NOW

If you are an SWL or ham who listens to shortwave -- and -- if you are planning to send a confirmation card to Radio Solo, the word right now is -- dont! This as the United States forces 193rd Special Operations Wing asks that reception reports and cassette tapes of its Commando Solo flying radio station broadcasts over Afghanistan not mailed to them at this time.

According to the Media Network e-newsletter there are two reasons. Obviously, they are involved in operations over a theater of war and need to lessen their peripheral workload. Also, due to the Anthrax scare in the United States, the U.S. mail system is overloaded with new safety procedures. In other words, your report may be indefinitely delayed or never opened. (Media Network E-Newsletter)

**

ATTACK ON AMERICA: NYC TELEVISION SEEKS NEW HOME

Seven weeks after a terrorist attack caused the collapse of the World Trade Center, hundreds of thousands of homes in the New York City area remain unable to receive more than four television stations. Because the main antennas atop the north tower came down, all the local stations, except Channels 2 and 41, which had backup antennas on the Empire State Building, had lost a significant part of their audiences. The situation improved last week when two more of the stations that lost their main transmitters began broadcasting from the Empire State Building site. Amateur Radio Newsline's Henry Feinberg has more:

--

On Thursday morninng, October 31st, Tribune-owned WPIX-TV channel 11 switched on a transmitter giving it an over-the-air signal said to be similar to what it was prior to the terrorist attacks. WNBC-TV channel 4 -- which in the late 1940's was the first to broadcast from the Empire site -- made a triumphant return later the same day when it flipped the switch on its new Empire located transmitter.

As an interim step to get back on the air, most local broadcasters had opted to use the old Armstrong Tower located in Alpine New Jersey. But the Alpine tower is not high enough and is to far away from the majority of the New York City demographic audience to provide clear reception throughout the metropolitan region.

The Empire State Building was the home to almost all New York City television broadcasters before the World Trade Center was built. Many broadcasters want to return to it but the New York Times says that Empire has to little space and not enough electrical power to accommodate the demands of all the stations. So a coalition of 11 broadcasters in and around New York are exploring options that include sharing management of a broadcast tower built to their specifications and needs.

The Times says that the long-term situation may be the construction of an enormous stand-alone broadcast tower. One that is perhaps 2,000 feet high and preferably be somewhere near the World Trade Center twin towers site.

But broadcasters will face a large number of issues if they persue the stand alone tower idea. Chief among them are the wants and desires of the residents of New York City. Many of them have made it clear that the area where the twin towers once stood be rebuilt a both a new trade center and also as a lasting monument to those who died in the terrorist attacks of September 11th, 2001.

Not far from the Armostrong Tower in Alpine New Jersey, I'm Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

Aside from the political issues mentioned in Henry's report there will be numerous other technical roadblocks. First is that of protecting the Philadelphia and Boston demographic television markets from interference. And if such a project is approved by the city at a different location, the Federal Aviation Administration will likely demand that it be built where it will avoid established flight patterns for local airports. And there are not very many of those in and around the metro New York City area. (ARNewsline(tm) from various published news reports.)

ATTACK ON AMERICA: VERTEX STANDARD / YAESU DONATES GEAR

According to a recent story in the ARRL Letter, Vertex Standard, which manufacturers Yaesu brand gear, has donated several pieces of equipment to Virginia ARES. The manufacturer had arranged to loan an FT-7100 transceiver and three of it's VX-5 hand-held's during the response to assist the Salvation Army at the Pentagon terrorist attack site. When the work concluded, Virginia Section Emergency Coordinator Tom Gregory, N4NW, e-mailed to thank the company and to inquire about returning the equipment. Vertex Standard Executive Vice President Mikio Maruya, WA6F told him that Virginia ARES was welcome to keep it on hand for future emergencies. The Woodbridge, Virginia, Ham Radio Outlet store cooperated in providing the Virginia ARES team with the needed equipment on September 13th. (ARRL)

REPEATER COORDINATION NEWS: NFCB AND NFCC ELECTION RESULTS

The National Frequency Coordination Council -- or NFCC -- has elected Nels Harvey, WA9JOB as its new President. Harvey replaces Owen Wormser, K6LEW. Wormser had served as Chairman of the original drafting group that resulted in creation of the NFCC back in mid 1990's and as several terms as President.

Also elected to office are Dave Baughn, K4XI as NFCC Vice President, Dick Isely, W9GIG as Secretary and Clay Freinwald, K7CR as the organizations Treasurer. Meantime, Clay Freinwald, K7CR, and Nels Harvey, WA9JOB, have also been elected for two year terms on the National Frequency Coordinators' Board of Directors. Both ran unopposed. (ARNewsline(tm))

**

REPEATER COORDINATION NEWS: SERA DROPS UNKNOWN CATEGORY

The South Eastern Repeater Association says that it has dropped use of the term ‘unknown’ for listing repeaters that it has little or no information on. According to the organizations publication Repeater Journal, the listing of about 150 repeaters as ‘unknown’ was intended to prod their owners to file delinquent updates or help clear the groups records of repeaters that are no longer on the air.

It did neither, but it did cause confusion for ham radio enforcement efforts. This occurred earlier this year when FCC Special Counsel Riley Hollingsworth cited the South Eastern Repeater Association's Unknown Repeater List as grounds for dismissing a complaint against an uncoordinated West Virginia repeater that had been accused of interfering with a coordinated system in Kentucky. The coordination counsel's FCC Liaison is reportedly working with Hollingsworth's office to clear up the confusion. (SERA Repeater Journal)

HANDI-HAMS: WINTER RADIO CAMP IN MALIBU IN MARCH 2002

The next Handiham Radio Camp session will take place the first week of March, 2002, at Camp Joan Mier in Malibu, California. That camp will be offering classes in Technician, General, Extra, Operating Skills, and JAWS computing.

There is no tuition charge for West Coast or D-X members aside from the $45 registration and insurance fee. If you want to receive a camp application packet, please e-mail handiham@courage.org or call 1-866-426-3442 -- days -- Central Standard Time. The most current camp information is available on the Handiham website located in cyberspace at www.mtn.org/handiham. (Handihams)

INTERNATIONAL – BAHAMAS: FEES GOING UP

The annual fee for those holding a Bahamian Amateur Radio license has increased to $25. According to the ARRL news, The new fee applies for licenses renewed after August 1. The cost to "catch up" on past renewal fees prior to 2002 is $6 per year. Some US amateurs with Bahamian tickets were surprised to get letters requesting the back renewal fees and threatening fines and revocation. According to Dick Long, C6AKE, the Bahamian Public Utilities Commission--which handles licensing there--collects $6 a year for the years your license has been expired--this has always been its policy, he says. If you don't plan to use your license anytime soon, Long advises returning it to the P-U-C or sending a letter stating that you won't be using it again. "If, at some future time, you want to return to the Bahamas, you can always apply for a new license," he added. The P-U-C e-mail address is puc@batelnet.bs. (ARRL)

**

INTERNATIONAL - BELGIUM: A BLESSED EVENT

Hams in Belgium are getting to take part in a truly blessed event. This, as John Devoldere ON4UN who is the President of the Belgian national Amateur Radio society announces that nations radio amateurs can use the special prefix OQ instead of their usual ON or OT prefixes.

According to Devoldere, Belgian telecom authorities issued this special prefix on the occasion of the birth of Princess Elisabeth. The permission to use the OQ prefix began on October 26th, runs until December 31st. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: THE NATIONS HAM-STATS

The New Zealand Ministry of Economic Development reports that as of November 1st that nation has 3,295 General Class license holders, 1717 Limited license class, 24 Limited Novice and 25 Novice class operators. These hams share 205 voice repeaters, 19 television repeaters, 29 digipeters, and 42 beacon operations. Mix in two fixed licenses and the grand total is 5358 licenses issued. (NZART)

HAM RADIO IN SPACE: ISS TALKS TO NEW YORK CITY SCHOOL

Ten elementary school students from New York City had some very specific questions about current events for International Space Station Commander Frank Culbertson. To the question, "What did it look like in New York on September 11," Culbertson responded that he could see the smoke rising from the World Trade Center site and drifting south.

--

Culbertson: “On September 11th we happened to be coming over a few hours after the attack and I could see a large column of smoke coming out of the World Trade Center and floating off to the South and a kind of a fog of smoke all over the Southern part of the city.”

--

Culbertson went on to explain that he took pictures of the tragedy from space. He further related that he found out about the event while talking to his doctor during a scheduled medical conference.

Another youngster wanted to know, "What does Afghanistan look like from space?" Culbertson answered that it appeared to be very desolate and rugged.

The questions could be expected. The children are students at P.S. 234, with its regular campus only two blocks from the site of the World Trade Center.

On September 11, all 650 students at the school and their teachers evacuated their building without a single casualty. The school community has stayed together despite the turmoil, and is now housed in temporary quarters elsewhere in Manhattan. Culbertson told the students that he admired them for their courage, and told them to continue to study.

--

Culbertson: “ I want you to know that the whole world is very proud of you. Its to bad that you had to move from school to school, but we are very proud that you are continuing to work and take your education seriously. Things will be alright. Don’t worry.”

--

The students asked a total of twenty questions during the ten-minute contact. Some thirty teachers and parents and reporters were also on hand as were reporters from the New York Post and New York Daily News newspapers.

The ham radio contact was made through the Amateur Radio on the International Space Station project, an international coalition and was carried live by MSNBC on its website. Former NBC science editor and Newsline anchorman Roy Neal, K6DUE, moderated the event. Communication was handled through W6SRJ, a club station at Santa Rosa Community College in California, with Herb Sullivan at the controls.

P.S. 234 has its own website. Its in cyberspace at www.ps234.org/about.html (ARISS via K5YFL)

HAM RADIO IN SPACE: AMSAT-OSCAR 40 UPDATE

AMSAT's Peter Guezlow, DB2OS, reports magnetorquing of the OSCAR 40 ham radio satellite is again in progress. Guezlow also says that operational periods for the RUDAK system have been extended recently. This, to allow downloading of several important RUDAK G-P-S files.

AO-40 is currently in a long period during which the Earth eclipses the sun near the satellite's perigee. This actually began about August 28th, and will rapidly increase in length. The eclipses will continue well into June 2002. (AMSAT-NA)

**

SPACE AND SCIENCE: A LOT OF BIRDS UP THERE

SpaceDaily reports a new survey by the Teal Group has identified some 600 active satellites in Earth orbit or in deep space. The survey factored in all satellites launched since 1980, and, after a process of elimination, arrived at an estimate of 600 to 610 for satellites that remain active today. (AMSAT-NA)

**

DX

In D-X, you may recall that shortly after the September 11th terrorist attacks on New York City and the Pentagon, the government of Kuwait permitted its ham radio operators to the call sign 9K2USA. Now Bob Furzer, 9K2ZZ, reports a very positive response to the use of 9K2USA.

9K2USA was used by all Kuwaiti hams through September 30th as a token of the sympathy and support for the people of the United States from the citizens of Kuwait. It was also meant to be a statement of deep condolence.

Furzer now tells the Ohio Penn D-X Newsletter that the Kuwait Amateur Radio Society wants to thank all of those radio amateurs who e-mailed their support of the use of this special call. 9K2ZZ also says that the design of an official commemorative 9K2USA Q-S-L card has been finalized and is now posted on the website at www.k4cy.com.   (OPDX)

From the U-K comes word of a new microwave D-X record. At least a new record for that nation. On Sunday October 21st the UK distance record for the 47 GHz band was raised from 163 to 203 kilometres. This happened when G7MRF and G0HNW, from Cambret Hill in grid I-O-74 had a two-way CW contact with G0IVA in gridsquare I-O-73 in North Wales. This distance comfortably exceeds the former record of 161 kilometres set in September 1999 by the same group. Reports of RST 519 and 419 were exchanged. (RSGB)

**

THAT FINAL ITEM: A MESSAGE TO REPEATER OWNERS FROM THE FCC

And finally this week, a word about repeater communications responsibility. It comes from the FCC's chief ham radio rules enforcer Riley Hollingsworth, and was included in a recent RAIN Enforcement Log Question and Answer session. If you own and operate a repeater, the next few minutes will be very important to you:

--

First of all, no licensee is required by the [FCC] rules to set up a repeater. When you do so, you do have certain responsibilities.

First, assuming that you have applied for and received coordination from your local repeater coordinating body -- if there is one -- and in a lot of areas there are not and in which case you would skip that step. As long as you are not interfering with a coordinated repeater, everything is all-right.

Once you start a repeater, you have to keep a few things in mind. First of all, if it is using your call sign -- it is your station -- and you are responsible for it. You do have a few alternatives as far as controlling it, but essentially it is your station and your responsibility.

The rule that states that you are not responsible for inadvertent transmissions I am afraid is often misunderstood. It only applies to inadvertent transmissions. [These are] transmissions that you let through on the repeater -- and I think it was designed for [modes like] packet anyway that you let through on the repeater before you realized what was happening.

Now, rules violations that occur by your users on a day-in and day-out basis or rule violations that go on for several hours are your responsibility as well as that of the users that are committing the violations. No dictionary in the world would define those types of situations as “inadvertent,” and I am afraid that a lot of people just do not understand that.

If you put a repeater on [the air] you are responsible for its proper operation. Now, if you can't do that, or you do not have the time or the inclination [to properly control it], then your choice is to shut if off and to do something else. This is very important in these times because Amateurs are being listened to more than ever before.

Everyone seems to be buying scanners and short-wave radios. Very often a repeater is new person’s first exposure to Amateur Radio -- and a potential recruit -- I might add. And, very often, it is the news media’s first exposure to Amateur Radio.

If your repeater is an embarrassment to Amateur Radio, then you should shut it down and seriously examine your motives for wanting a repeater. You will be held responsible for regularly occurring rules violations, as well as the people committing the violations.

I would hope that more and more Amateurs would understand this. I think that the rule that you are not responsible for inadvertent transmissions has been misinterpreted by a number of people.

--

What Hollingsworth really seems to be saying is that your repeater is kind of like your house and your surrounding property. Yes, you have responsibility to make your home secure for you and your family. You also have a responsibility to keep it and its surroundings neat and clean so that your neighbors will also enjoy the view. (FCC, RAIN)

Hello. I recently purchased an MFJ-9406 and will be getting a 10w in 150w out amplifier for it. In the manual for the 9406, it talks about the RCA jack on the back of the radio in relation to an amp. The amp I am getting (Mirage 1015) has an RCA jack also on the back. What is the purpose of connecting these together this way? Does Radio Shack sell a pre-made cable that I can use here? Is it REQUIRED to run the amp?

Looking into performing the wide band TX mod (snip snip d2030) on my
706mkiig. What exactly will be the TX/RX coverage after the mod (hard
numbers please)? Insight? Thank you.

Grizzly

The reactance can vary quite a bit from what I've heard. Wildly in
some cases. I've never had any real problems using them with tube
rigs, and in certain cases a solid state rig would have no troubles.
But it's better to use a real dummy load so you know what the load
will be fairly accurately, and that it won't vary much at different
power levels. I used a lightbulb on my first novice rigs, including a

viking valiant, but use normal dummy loads now. "cantenna and the one in my tuner". You'll need a good accurate load to get accurate wattmeter readings. Bulbs are too unstable. MK

I am liquidating my supply of sweep tubes. A partial list is included in this post. I am also liquidating my supply of transmitting tubes and sockets, a couple chimneys, some pencil tubes, a photomultiplier tube, and a whole bunch of other stuff.

For the complete list, and for more information, check my "yardsale" website at;

http://members.aol.com/ecc81/yardsale

If you are interested in making a purchase, please EMAIL ME "off list" at < OvrReactor@aol.com >.

Regards,
Tom Mitchell

================
Other types and variants available,
email your "want list".

================

Each of the tubes listed here have been checked on a B&K 667. All of the tubes listed below test STRONG, have no grid emission/gas/leakage, and have no shorts. The tubes marked "USED" may have discolored glass or significantly vaporized getters, but they STILL test strong. I have no way of in-circuit testing, so I can only warrant that these tubes will test good in a similar tube tester and not be DOA, but otherwise must be sold AS-IS.

Hi,

I hope I'm not repeating a common question. My license is about to
expire and I don't know what FCC form or the procedure to renew it.
Could someone please point me in the right direction.

Thanks in advance,

Edmund Troche

Ed...
  Go to the ARRL website (and maybe W5YI's too)... there's a whole section on renewing your ticket and how to do it on-line... or check with some local VE's (the guys that give the exams) and they'll set you straight with the proper forms)

Good Luck!

I downloaded numorse and started out at 5wpm to learn, TOO SLOOWW I could not find any form of style to it and had to count. so I figured I crank it up a bit to 12 better, then 20 with a text speed of 9. so far I know ABCD at 20wpm I just started to know. anyhow I also keep it running in the background so I hear it while I do other work on the PC. is Numorse the best program to learn or is there something better?

Why are you learning code? To talk to people, or pass a test? Being as no ham tests require 20 wpm anymore, I'd have to assume you want to talk to people.
You really want to start out at a fairly slow speed. Or at least be able to copy at that speed. After all, not everyone does 20 wpm. But it is a good idea to vary the rates and try different speeds. The best way to learn code is with on the air practice with real operators.

Code programs are too repetitive, and don't teach you on the air procedure. Also you will learn faster as you are actually doing something instead of just listening to a tape or program. The programs can be used to learn the alphabet, but once you do, dump the puter and get on a real radio and operate. You only need to pass 5 wpm for that. If you start out at 5 wpm, with a couple of qso's a day it's quite possible to be in the 18-20 wpm or faster range in a year or so. And you don't notice it as work as you are yik yakking. The longer you do it, the easier it gets. MK

Not sure how you are setting the code up, but one of the beter ways is to set the character speed around 15 to 20 wpm and the spacing between each letter is equal to 5 wpm. I am not sure what the rules are now for a ham license in the US but know it is 5wpm but I think they are normally sending the characters at 13 to 15 wpm. Don't try to learn the code as ABCDE... but mix up the characters.

Good for you!!

Some one else here asked why you were doing it. The best reason is because you want to!

I see nothing wrong with running the characters at 20 wpm and spacing them out to average at a lower speed. That is the prefered way to learn.

I'm a bit rusty now, but what I used to do way back in my high school days was to copy the evening news at 35 to 40 wpm. Good practice. Unfortunately, since ships at sea don't use Morse anymore...

As far as the program repeating the same thing over and over...I once wrote a program for my own use that sent random characters and character groups, so I know it is possible. Since I haven't been in the market for such things for quite a while (over 25 years!) I don't know if there is anything like that available. I just know it is possible. (Sorry, the program I wrote is not available. Besides, where can you find an operational KIM-1 now days?)

To talk to people on HF I have to pass a morse exam and If Im going to learn morse I figure learn it the right way, 5wpm was painfully slow. cant talk on 75meters etc without the morse and the written test is no problem since I like electronics and radio, anyhow this program uses the farnsworth method it randomly generates different letters so you dont memorize the order of the letters. I was able to pick up in 2 hours the letters A through I when I was done and weird thing is I still remember them. anyhow at 20wpm the morse seemed easier to understand since I did not have to count dots and dashes. I will do CW once I learn since Im making the effort I will work CW first for a while before doing SSB.

it mixes up the characters Im up to ABCDEFGHIJ now its the farnsworth method it randomly selects one of the letters. Im doing 20 and spacing of 9 wpm I think 10 is the max on this. but in 2 hours by instinct I was able to pick the right letter as it generates it randomly, pretty neat.

I'm offering the following Collins items for sale:

- 516F-2 Power Supply, winged emblem, serial no. 11805. Near perfect condition, stock tube setup, and tested good 11/28/01. Very nice power supply for $400.

- 312B-4 Station Control, winged emblem, serial no. 996. Some scratches but works perfectly. Tested 11/29/01. $300.

- 32S-1 transmitter, winged emblem, serial no. 10182. Very good condition, tested 11/30/01 to 120 watts output and very clean audio. $600

- 30L-1 Linear Amplifier, winged emblem, serial no.12194. Very good condition, used daily, and tested 11/1/01 to 600+ watts on 10-80. Very nice amp for $800.

All prices are firm, no bargaining. If you want to haggle go elsewhere. Serious buyers please contact Tim, AL0F, at (520)398-9543 or email at tbal0f@aol.com. Can also leave message on cell phone # (520)907-8079. Will split shipping charges with buyer.

```

It is much better to listen to words instead of just groups of letters, especially since you have learned the patterns of letters. Hams send words over the air, and when you recognize the words instead of just the letters, your speed increases greatly. One way to do this with a computer is to copy article from some of the electronic newspapers such as cnn or cbs, and have your morse software send the text as code. Once you do this you will learn the sound of the common words such as 'the, and, name, etc,' and the codespeed gets real fast. Then, turn on the radio and listen to the cw, try the 30 meter band, and just listen to what the hams are saying in the qso's. If you can do that, go pass the test, warm up your key and jump in.

> From: jdobbs2001@yahoo.com
> I downloaded numorse and started out at 5wpm to learn, TOO SLOOWW

OM John - You are "right on" about 5 wpm being too slow. Code is fun, as well a language bridge for DX and a much easier mode to work stations when conditions are poor, or you do not have much of an antenna or high power. Plus, once you get your speed up, it's almost as fast as voice, and with time will be just as comfortable as speaking to someone. I drive to work and operate mostly CW - no writing needed; with the 5-speed manual transmission my car has, my sending gets poor driving in downtown traffic, but I still drive better than most cell-phone drivers. HI HI

But as to how to best learn it for conversation or just passing the 5 wpm test, the answer is the same - learn at a letter sending speed of 16 to 19 wpm, with gaps between the letters so your average word speed speed is 5 wpm. The term for this type of fast sending with big spaces between letters is called "Farnsworth". Most examiners (VECs) either test you this way, or give you the option of Farnsworth or standard spacing for your test. Here are the reasons to learn your code this way:
1) It is far easier to hear the letter, think of what it is, and write it down before the next letter - than to be listening to the next letter while you are writing down the last one.
2)Once you learn the sound of each letter, the sound of the letter will remain about the same until your speed goes well over 20 wpm. This means that once you learn the code, all you must do is learn to write faster, and eventually learn to write while listening to the next letter, as you go on up to a speed of 25 wpm. OTHERWISE, you will find that 10 wpm letters have a different sound from 5 wpm letters, and 17 wpm letters do not sound like 10 wpm letters. It is almost like learning the code all over three times, if you go from 5 to 17 wpm using standard spacing for each speed. And it is truly easier to learn the sound of all the letters at 17 wpm, than at 5 wpm.WARNING: If you learn 5 wpm by counting the number of dots and dashes, you will never get over about 7 wpm

until you retrain on the sound. (I did that!)

I have a freeware program that will give you practice receiving Farnsworth, but it runs on Basic in DOS (I know, dark age). If it would be any use to you, just post back and I will send over to your yahoo address.

Do find someone to work with; it makes the learning easier and more fun. I always taught my classes throwing in a few words (such ad ES for 'and' and DE for 'from' and HI for a 'laugh') along with the alphabet, numbers, and punctuation. Two sessions a week for six weeks and everyone who stayed with it passed the VEC test at 5 wpm; about 20 percent of my classes passed the 13 wpm "warmup" they were given back when 13 wpm was needed for general and advance licenses. Anyhow, good luck. It is work, learning the code. Most, who actually get on the air and use it, will stick with CW for at least a part of their operating fun. 73, Andy

Ok, so you are mainly wanting to pass the test. Most of the present
tests are given using farnsworth timing. So you shouldn't have any
trouble doing that. I think the tests are usually given at a 13 wpm
character speed and spaced to average 5 wpm. Maybe even 20/5 wpm. But
once it's drilled in your head it shouldn't be so critical.
But if you decide to actually want to use CW, I'd only practice on the
air. You'll pick up speed faster in the long run. And you'll also be
used to real world conditions and operating habits. More fun too than
a random sender.   MK

If the relays are encapsulated/sealed, as they may well be,
try this trick. Drill a small hole in the can (care needed)
then squirt in your favourite switch cleaner (Deoxit). Allow to dry
for a couple of days then seal the hole with tape. This has
worked well for me on other radios.

That was the main point:

By chance, as working up to K16 casually closing metal pincers but without touching it, I found the switch relais suddenly retourned into resting status in a succesfully fashion. Then I discovered that metal pincers were magnetized, so I did set a small door's magnet inside the cabinet and near the small loudspeacker as located close enough to resting side for the switch relais, and then... bingo!

It is more than probably that switch's internal spring became rigid or
faulty and then a small magnet near by is just counter acting or helping
contacts to go back into its resting position.

No problems any more, but let's see how long it shall keep lasting and
working fine!

Thank you very much indeed to all in the amateur radio newsgroups for your
help.

John -

You approach is fine, sounds like a modified version of the Farnsworth method.

If you have the program send each character at 18 to 20 wpm and vary spacing for overall desired wpm (7 to 10 wpm) you should learn CW the correct way (overall sound and not counting dots and dashes). You may also wish to break up you learning with 5 character groups - the same way the FCC use to test 18 wpm for commercial Telegraphy endorsement.

Don't let a few people here on Usenet asking why learn CW at 20 wpm bother you.

I don't ask my fellow amateurs why they spend thousands of dollars chasing DX.
There is no "correct" interest combination for this hobby -- if there was would not have homebrewing, satellite, packet, microwave, etc.

I also don't ask my neighbor why he spends thousands of dollars on automobile restoration and antique collecting - but that is what he likes to do !

If you like the mental challenge, listen to the W1AW propagation and CW bulletins at 18 wpm

Hi,
Anyone with the Kenwood TH-205AT tell me how to program PL tones.

surely appreciate any help.

Thanks.

<snip> is Numorse the best program to learn or is there something better?
>
I can recommend NuMorse, but NuMorse Pro is awesome! It does Farnsworth,
allows you to set your own customized memories for speed, spacing, etc., and
Tony's support can't be beat.

Look, code can be fun as well as a requirement. If you want to "just pass the test", almost any method will get you to 5 wpm. But there may be a "psychological barrier" at 10-12 wpm. So a good approach might be to learn the code sent at 5 to 10 wpm but with characters at 20 wpm. NuMorse and NuMorse Pro will do this.

72/73
Michael

Amateur Radio Antennas Made By Amateur Radio Operators
Our Mission Is To Bring You Quality VHF / UHF Antennas At A Great Price
we feature a complete line of ready to use J-Antennas. The frequencies we stock and that are not considered special order are 1.2 ghtz, 70 cm, 1.25 meters, 2 meters/70cm, 2 meters/1.25 meters/70cm tri-band, 6 meters, and 10 meters.
We will make an antenna for any frequency from 10 meters to 2.4 Gigahertz to fill any need.(What is considered a special order antenna) they would be antennas for sound systems, marine or aircraft frequencies, commercial FM frequencies, cell phone frequencies, any antenna not listed as standard stock ham band antennas !
Where you need a "J" antenna, we will help!
We have sold over 9000 antennas to date !

AS SEEN IN WORLDRADIO !
STARTED MAKING ANTENNAS ABOUT 1994
THESE ANTENNAS HAVE BEEN USED FOR THE PAST 4 SUPERBOWLS, NBC
STUDIOS IN
HOLLYWOOD, ALSO CBS AND ABC...USED AT LAST YEARS MTV MUSIC AWARDS,
ALSO THE TV
SHOW , DAYS OF OUR LIVES , AND THE ROSEY O'DONELL
SHOW.
WE MAKE THE "J" TYPE ANTENNA IN COPPER, AND A ROLL UP STEALTH
VERSION, WILL CUSTOM
TUNE A "J" ANTENNA FOR ANY FREQUENCY FROM 10 METERS TO 1.2
GIG.....

I just posted this over in rec.radio.scanning, but I thought someone here
may be interested in it as well.

One more tonight people while I clean out the radio closet,

I also have a RS RF Freqeuncy Counter that I bought in September of '97
according to the warrantee info in the box and probably used all of three

times. It is in the original box with the original manual and antenna. The warrantee slip is in the box - that expired in September of '00. Condition is truly like new since it was used so few times and stored it the original box.

The model number is 22-306 and it covers 1 kHz to 1300 MHz, has a backlight, and various settings (range, gate speed) to help capture that elusive frequency.

I think I paid $100 for this unit, probably around the original retail price of it. I'll ask for the best offer over $50 before 11 December on this one. Bank check or money order preferred, personal checks may be held until they clear.

Thanks!

Well, I assume you mean me , being I see no others that said that. I had to ask him that to know the best advice to give him. It's different depending on what he wants to do. Why would I care how he does it?

> I don't ask my fellow amateurs why they spend thousands of dollars chasing
> DX.
> There is no "correct" interest combination for this hobby -- if there was
> would not

Maybe not, but being I can do up to about 55-60 wpm or so and have worked CW since I was in the 8th grade, I think I'm qualified to decide how I want to answer him. And I needed to know "why" so I could do that. If he wants to actually use it on the air and talk to people, the farnsworth method can cause him as much grief operating in the real world, as it does help passing a simple test. Not everyone does the same speeds with the same spacings. To pass the test, the farnsworth method is no problem. But to operate it can be. He'll get some slow guy on there at 8 wpm with uneven spacing , and he'll vapor lock. Thats why I recommend real world practice to anyone that actually intends to use cw on the air. Many don't. Many just want to pass a test. Thats why I asked him. I could really give a rats ass how he does it. Thats up to him. As you note, I ended up agreeing with his method after I knew "why". Do you feel better now? Or do you have more boring "I don't" stories to tell? MK

Hey all!   Sold the Omni hr so I dont need to boom mic for a Ten Tec.
good shape,   seldom used. have all papers, wired now for Ten Tec,
could be wired for any rig for that matter!   Has the HC-5 mic element
in it!   shipped to your door. $60 .   Postal money is fine.
contact Steve wd5hni at   "hogman@ev1.net"
Or Im good on QRZ mail.

thanks,   73's   Steve wd5hni....

Looking for a good logging software, so that I can make notes of the
QSO I conduct. Right now, I'm only chatting on 2 meters, but find it
interesting to make notes in my log about the date, time, frequency,
and details about the QSO itself. It would be a simple enough
program. Does not need to be used for contesting, or anything such
as that, but just to log the contacts, and so that I could search
quickly to recall QSO's, etc. Any ideas? I spose I could come up
with something on my own, but if there is a simple logging program

out there, I'd save myself from reinventing the wheel.

Thanks,

Van, KG4PTM

Try XMLog. It is FreeWare and is one fine logging program. I have over 4000
qso's in mine now and it is just excellent. There are always new bells and
whistles being added. Go to: http://www.xmlog.com and it yours for the
download.

```

Selling MFJ-9406 6m SSB radio. Includes original microphone and Radio Shack universal DC power adapter (Model 273-1815). This radio is in very good shape and works flawlessly. I've been using it for the past month or so, making contacts around the country, and have decided to buy an RCI-5054 6m all mode.

Asking $175 plus shipping, firm. Email your reply!

Visit http://www.mfjenterprises.com/products.php?prodid=MFJ-9406X for complete details.

Xref: archiver1.google.com rec.radio.amateur:2708

Selling Ten-Tec transverter. Allows any 2m radio to operate on 6m! Input of 5 watts gets 8 watts out on any mode your 2m radio covers. In very good shape, used for a short time, but decided to go with an RCI-5054 6m all mode radio. This unit is factory assembled, and the only work done on it since the factory was replacing the on/off switch, because it had been damaged when it was shipped to me.

Asking $100 plus shipping, firm. Email me if interested.

Visit http://www.tentec.com/Xvertkit.HTM for complete details.

Check out XMLOG or VQLOG. Both are simple and cheap.

try the following spots:
www.arrl.org
www.rac.org
www.qrz.com

You could fill in what your computer setup is just to be sure what you end up with will run on your system.. This sort of software should be available though, I've found it from mac to windows to atari st even.

Hi everyone,

I'm looking to write my own ax.25 software (on Atari ST) and wondering
if theres any software out there for which source code is available that
I could use as an example?

thanks
James

Hi All,
I was curious about using PIN diode limiter for protecting RF Circuits. How is normally done? Are there any standard references for the same. How are they effective. In series or Parallel?

Thanks in Advance
Madhukar

Does your rig have the PL board?

It is a dip switch thing under the battery.

Let me know what tone you want.

I have created a new email reflector that I hope will grow with popularity and
provide a place for a real discussion of VHF+ all mode. This reflector is for
the discussion of the amateur bands from 50 mhz on up, all modes, regardless of
where you are in the world. If you are interested, please visit
http://groups.yahoo.com/group/vhfallmode/ to sign up!

Looking for good info on 802.11b antennas. How far is it practical to
shoot this kind of low power signal? Are there any fog issues at the 2+GZ
frequency?

Check Cisco's website (www.cisco.com). Good info, but you'll have to
dig for it.

I've heard of 2 miles, line of sight, with the appropriate directional
antennas. And yes, there are fog issues at this frequency. And rain,
and anything else with water in it. :-)

AMATEUR RADIO NEWSLINE(tm) REPORT #1266 – NOV. 16, 2001

Amateur Radio Newsline report number 1266 with a release date of Friday, November 16th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio operators respond to a plane crash in New York City and Russia says “No” to No-Code. These stories are first on Amateur Radio Newsline report number 1266 coming your way right now.

(Billboard Cart Here)

RESCUE RADIO: HAMS HELP IN AFTERMATH OF NYC JETLINER CRASH

Ham radio operators in New York City, still weary from the aftermath of the September 11th terrorist attacks were called out once again. This, after an American Airlines jetliner in route to the Dominican Republic broke up in flight shortly after takeoff from Kennedy Airport. The Airbus A-300 had 265 passangers and crew. It crashed moments after takeoff setting homes ablaze on thrr Rockaway penninsulia. There were no known survivors. We have more in this report:

--

When American Airlines Flight 587 crashed just minutes after takeoff from Kennedy Airport in New York City on November 12th, the Salvation Army was one of the first groups to arrive at the disaster scene. It brought in several mobile canteens to help feed rescue workers and residents whose houses had been damaged or destroyed.

The Salvation Army regularly uses ham radio operators in its SATERN network to maintain communications between its units at a disaster site. This being the second disaster to hit New York in two months' time, the Salvation Army Incident Commander asked the SATERN disaster command operator, Carlos Varon, K2LCV,to request additional ham volunteers. Operators were needed to staff the canteens and a mobile command post.

Initially up to a half dozen ham stations were to be set up at various locations near the crash site and another at Salvation Army Headquarters in Manhattan. It was anticipated that the communications mission would last three to four days.

Also, according to ARRL New York City and Long Island Section Manager George Tranos, N2GA, the League's Amateur Radio Emergency Service was on standby for the American Red Cross. Hams were later reported as providing communications support to the Red Cross for its operations.

But getting to any assignment was not easy. New York officials initially feared this was another terror attack and put the city into a near lock-down, closing all airports, bridges and tunnels for several hours after the crash. In addition, the crash site itself was on an island, and access to the area was severely restricted. All this made it difficult for ham volunteers to reach their assignments. Finally, they were all told to gather in one place where they would be escorted in by a Salvation Army command vehicle.

Among those who helped organize the ham radio response was Mark Phillips, KC2ENI, the ARR Emergency Coordinator for Queens County. The Rockaway Command station was Joseph Albertus KB2QLE and Net Control on the 147.090 MHz repeater was Michael Lunetta W2MPL.

From the offices of CQ Magazine, I'm Rich Moseson, W2VU.

--

Authorities who found the flight data recorder said it contains information leading to an initial conclusion that mechanical failure of the Airbus jet was the cause of the crash. (W2VU, WB2FXN, K2VMR, N2GA, and communications monitored on the 147.09 repeater)

**

RESTRUCTURING: RUSSIA SAYS NYET TO NO-CODE

The Russian Federation has said ‘nyet’ to no-code. According to the W.I.A. Victoria News, the Federation says that there are good reasons for the Amateur Service to continue with Morse as a license requirement for operation below 30MHz. It also says that it has no plans to make any changes to its domestic licence conditions. Amateur Radio Newsline’s Roy Neal. K6DUE, takes a look at the surprise Russian position:

--

"Keep the Morse Code." That's the position of The Russian Federation. It was revealed by the International Telecommunications Union on the 12th of October, when that organization released a position document for the World Radio Conference of 2003..

The Russian Federation told the ITU that it supports most changes to International Radio Regulation S-25, which sets forth qualifications for radio amateurs. But, says the Federation, keep the Morse code. Reasons? First a strong belief that Morse testing is the big difference between Amateur Radio and the Russian version of Citizen's Radio Services. The Russian Federation also points out that lowering the code requirement in many other nations has not led to a significant increase in the number of hams in those countries.

The Federation says that it surveyed Russian radio operators and found overwhelming support for retention of the code and the Russians say Morse is one of the most effective means of communication in emergencies with clear benefits in reducing interference on the high frequency bands.

What does it mean to the rest of the world, this decision to retain Morse testing? Jim Linton, VK3PC, is the author of Australia's "Morse Code Watch." He says the Russian Federation's position can be accomodated easily. This because any new I-T-U Radio Regulation S-25 to come out of the World Radio Conference in 2003 will set only a minimum qualification standard for radio amateurs. It will not force that standard on any country.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

As previously reported, the IARU Administrative Council voted on October 8th to support dropping Morse as a qualifying criterion for high frequency access. It says that Morse testing is no longer relevant to the healthy future of amateur radio. (W.I.A. Victoria, W5YI Report)

**

THE 100TH ANNIVERSARY OF MARCONI'S HISTORIC TRANS-ATLANTIC RADIO TRANSMISSION

I'm Bill Pasternak, WA6ITF, in Los Angeles, with a late breaking bit of radio history.

December 12th will mark the 100th anniversary of the first Trans-Atlantic radio transmission by Guglielmo Marconi. To commemorate the event, The Marconi Radio Club and The Falmouth Amateur Radio Association radio operators are making plans to celebrate this important historical event from December 11th to the 16th. And in this very rare recorded interview supplied by Q-News, Marconi himself commented on the his first contact across the Atrlantic pond. Take a listen:

--
Audio of Marconi commentary here. No text available. Please listen to audio newscast. Links are at http://www.arnewsline.org.
--

The signal Marconi referred to was a series of the letter S transmitted using CW across the Atlantic from Poldhu, Cornwall England to St John's, Newfoundland. For this 100th anniversary, the Marconi Radio Club will be using the call sign W1AA slash CC and will be operating from Cape Cod, Massachusetts, U.S.A.. This was the location of Marconi's 1903 Trans-Atlantic radio station. Marconi's 1903 call sign back then was "C C"

For exact times, frequencies and modes of operation for W1AA slash CC go to www.qrz.com/database?callsign=w1aa) (K1VV, Marconi Radio Club W1AA. Marconi audio supplied by Q-News)

**

BREAK 1

**

AMERICA AT WAR: G3 MAY HAVE TO WAIT

It now appears very unlikely that new G 3 personal communications technology will share the same spectrum worldwide. Amateur Radio Newsline'sa Henry Feinberg, K2SSQ, tells us the U-S military has other ideas:

--

While Europe and Asia have reached accord on commen frequencies for the introduction of G 3, the September 11th terrorist attacks in New York City and Washington have convinced the Departrment of Defense to take a different position. The DoD now says that it is not in the national interest to relinquist spectrum in the 1710 to 1850 Mhz band just because that happens to be the same spectrum to be used commercially overseas.

According to the latest issue of the W5YI Report the Cellular Telecommunications and Internet Association says that the Department of Defense will encounter interference from 3 G wireless devices but the DoD disagrees. It says that whatever equipment it has is far more powerful. The DoD adds that it may interfere with 3 G cellular telephones oversaeas but that the cellphones will not adversly impact on the military or its operations.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

In other words, over here in the United States, if G 3 wants 1710 to 1850 Mhz -- its going to have to wait. (W5YI Report)

**

AMERICA AT WAR: EMERGENCY CELLULAR TELEPHONE PLAN

Verizon Wireless and the United States government are in the final stages of a deal that would give some emergency officials priority access to the company's cellular network. Under the agreement, about 2,000 federal, state and local officials would be given a code that allows them priority over others trying to make calls.

The system, intended to be used only in times of crisis, would be operational in New York, Washington and Salt Lake City, the site of the 2002 Winter Olympics. Verizon has submitted a request to the Federal Communications Commission, which must review and approve some elements of the plan. According to a government official who spoke on condition of anonymity, others trying to make calls could get busy signals because of the plan. (Published news reports)

**

ENFORCEMENT: FCC TO CB OPERATOR – TIME TO PAY THE FINE

The FCC has told a mid-West C-B operator that he has to pay the price of breaking the rules. This after the agency affirms a $9500 Monetary Forfeiture issued last summer to Klaus D. Kramer of Oklahoma City Oklahoma.

--

The Klaus Kramer story goes back to last February. This is when the FCC received several complaints of a CB radio station operating with excessive power in Oklahoma City. The Dallas office sent agents to locate the source of the transmissions. In the course of the two day investigation the agents traced transmissions to three locations including Mikes Cycle Shop. The latter is a business owned by Klaus Kramer.

The agents conducted inspections that revealed that Mr. Kramer violated Section

301 of the Communications Act by operating radio transmitters without authorization. Kramer admitted to making the transmissions and voluntarily relinquished the equipment. On March 12th the Dallas office issued two Notices of Violation to Kramer. In response to the Notice's of Violation, Kramer acknowledged the violations and indicated that he would discontinue operation of the station. On July 13th, the Commission's Dallas Texas field office issued the Notice of Apparent Liability for Forfeiture in the amount of $9500 to Kramer for the noted violations. Kramer filed a response to the NAL on August 14th claiming that the amount was excessive.

In denying Kramers appeal, the FCC's November 8th order says that its Dallas office has complaints regarding similar operations on two separate occasions in March 1998 and October 1999. In both of those instances, Kramer also voluntarily the offending equipment and on at least one occasion stated that the violations would not be repeated. None the less, the FCC says that its investigation has revealed that Mr. Kramer again: "...violated our rules" in February 2001. Thus says the government, imposition of the $9500 is not excessive and is proper in this case.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, reporting.

--

Kramer was given the usual thirty days to pay the fine. He also has the option of further appeals. (FCC)

**

ENFORCEMENT: FCC TO STATION OWNER - YOU ARE OFF THE AIR

Hams are not the only ones feeling the pinch of the Federal Communications Commission action. Five Midwestern radio stations have gone off the air after the agency denies an appeal by their owner who the FCC says was found unfit to continue to operate them.

Back in 1994 the owner was convicted of crimes involving minors. He was sentenced to an eight-year term and was released in 1999 after serving five. Last July he was told by the FCC that he no longer held the minimum requisite requirements to remain a Commission license. Also, that he would lose his licenses to operate the stations within 90 days.

Last month he petitioned the FCC to allow him to continue operating the stations. The FCC denied his request on October 3rd and the stations stopped broadcasting just after midnight October 4th. The FCC says it plans to auction off the station licenses. The owner is reportedly considering an appeal. (FCC, other published reports)

**

FCC NEWS: MASS MEDIA BUREAU APPOINTMENT

Nina Shafran has been named Deputy Chief of the FCC's Mass Media Bureau Audio Division. Shafran joins the Commission from the staff of the Dow, Lohnes & Albertson communications group where she specialized in broadcast matters. (FCC)

**

HAMVENTION UPDATE 2002: DISPELLING RUMORS

If you are one of those who heard a rumor that the Dayton Hamvention is leraving its longtime home at the HARA Arena, then forget it. Its nothing more than the normally irresponsible Internet rumor mill working overtime. Bill Pasternak, WA6ITF, has more:

--

According to planners posting to the official Hamvention website, the erroneous rumor began the week of Hamvention 2001. This, after it was was allegedly printed in a Chicago newspaper that the HARA Arena had been sold. It had not been.

The Hamvention Committee spent the weekend of the 2001 event reassuring its vendors and attendees that HARA had not been sold. Also, that Hamvention's contract had not been "bought out" and that it would be back at HARA.

But that’s not all. The HARA Arena management issued its own formal statement. It also satated that the HARA had not been sold, and that it will not be razed. We at Amateur Radio Newsline were there. We heard it first hand.

Most important the HARA folks reitterated what the Dayton Amateur Radio Association has stated. The Hamvention will be there as promised. And as those of you who received last months mass mailing already know, the dates are May 17th, 18th and 19th, 2002. We will see you there.

For the Amateur Radio Newsline, I’m Bill Pasternak WA6ITF in Los Angeles.

--

So much for the rumors on the Newsgroups and other internet gossip spots. The real story is always at www.hamvention.org. (DARA)

**

BREAK 2

From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website - www.arnewsline.org.

EMERGING TECHNOLOGY: DTV ROLLOUT UPDATE

Roughly two-thirds of commercial television stations plan to broadcast a digital signal by a federal government deadline of May 1, 2002. This, according to the National Association of Broadcasters.

In a report to the Federal Communications Commission, the industry group said that many of those that won't make the deadline are waiting for equipment to be delivered and expect to have digital broadcasts on the air in the months afterward. But some stations in smaller markets are having a hard time paying for the upgrade, the association says.

Right now, most home television sets in use receive only analog signals. But congress has mandated that broadcasters must give up their analog channels to the government by 2006. As a result, there are concerns that consumers won't have made the costly upgrade to
televisions that can receive digital signals by that date.   (News release)

**

HAM RADIO IN SPACE: ISS TALKS TO WISCONSIN SCHOOL

Students at Tremper High School in Kenosha, Wisconsin, asked questions the morning of November 6th of the International Space Station Expedition Three Commander Frank Culbertson that got some very personal responses. Culbertson told the teens that he certainly did not expect as much to be happening on Earth during his stay at the orbital outpost, in obvious reference to terrorist attacks. He said that he wished that he could have been with his family during the most stressful times, but he took comfort in knowing that they were strong, and could get by.

On a brighter note, Culbertson said that his current mission is the high point of his space career. He added that he hoped some of students at Tremper High can do the same thing some day.

In response to another question, Culbertson said that he hoped to see cheaper access to space, and hoped for a manned Mars mission and a permanent lunar base during his lifetime.

The contact was an event facilitated through the Amateur Radio on the International Space Station project, sponsored by AMSAT, ARRL and NASA. In all, fourteen students asked one question each during the contact. About 60 other students and a few teachers witnessed the event in person, while M-S-N-B-C carried the audio portion of the contact live over its website.
(ARISS release by Gene Chapline, K5YFL)

**

HAM RADIO IN SPACE: NEW ANTENNAS HEADING TOWARD THE ISS

The International Space Station could have a new set of ham band antennas by early in 2002. The antennas are expected to be trtansported to te ISS this month and installed around the perimeter of the Service Module. This will give the I-S-S ham station high frequency, VHF, UHF and microwave capabilities.

The most interesting of all the new antennas is the high frequency array. Its made up of a two and one half meter long flexable tape that will definately work on 10 meters and holds posibilities on 15 and 20 as well.   This particular antenna was a joint effort of the Italian, Russian and United States ARISS design team. (ARISS)

**

HAM RADIO IN SPACE: STARSHINE NEEDS TELEMETRY REPORTS

Ground controllers of the Starshine-3 ham radio satellite are seeking volunteer amateur radio operators and others worldwide to monitor and report telemetry from the recently-launched satellite.   Starshine 3 transmits 9600 bit per second AX-25 protocol packet telemetry every 2 minutes on 145.825 MHz.

The satellite's primary mission is to involve school children from around the world in space and radio sciences. Students should be able visually track the satellite during morning and evening passes by recording its telltale mirror flashes and reporting their observations to Project Starshine. To report Starshine 3 telemetry or to learn more about it, please visit http://epulation.com/starshine/starshine3. More information about Project Starshine is available at www.azinet.com/starshine. (STARSHINE vis AMSAT-NA)

**

CONTESTS: THE PSK-31 DEATH MATCH

Call it a truly different kind of contest. This, as the Michigan DX Association announces that it will sponsor the PSK-31 Death Match. The dates are December 7th through the 9th and a trophy will be awarded to the highest overall score. Just what is the PSK-31 Death Match and what are its rules? You can find out on the web at www.geocities.com/mdxa1/death match.html (Internet release)

**

DX

In DX, a big surprise for 6 meter enthuiasts. Jeramy boot, G4NJH, has the details:

--

A combination of high solar flux and low magnetic activity provided world-wide F-layer propagation on 50MHz during the week up to the 4th of November. Strong backscatter and the occasional Sporadic E openings meant that all continents were worked from the UK on 50MHz during the course of the week.

On Tuesday, the 6th of November, a solar coronal mass ejection hit the earth's magnetic field at 0150UTC and triggered widespread auroras. Observers as far south as central California reported seeing vivid displays of the Northern Lights, although we had no reports of visible auroras in the UK at the time of compiling this bulletin.

--

As we go to air 6 meters remains a worldwide D-X paradise. More information is on the web at www.rsgb.org and on the subscription VHF reflector. (G4NJH)

In other D-X news word that two Spanish operators will be in Cameroon between the 11th and 23rd of November. The pair will be working on the installation of HF and VHF stations in hospitals and missions. In their spare time they will be on the air as TJ2RSF on the High Frequenvcy bands. Activity will be mainly SSB, with some RTTY and CW. (VHF Reflector)

And Chris Post, N3SIG, who is a Firefighter and EMT in the United States Antarctic Program at the McMurdo Station on Ross Island is now active as KC4/N3SIG until March 2002. Post told the Ohio Penn D-X newsletter that he will be active every other day starting around 2000-2100 Eastern U.S. time primerally using SSB on 20, 18 and 15 meters. All QSL cards go to AI3D and be sure to include an S-A-S-E. (OPDX)

**

THAT FINAL ITEM: HAM RADIO IN LEBANON

And finally this week, a look at how ham radio is able to survive in Lebanon. Q-News Graham Kemp, VK4BB, looks at the nation, its licensing system and its Amateur Radio Community:

--

Wireless communication was first introduced in Lebanon by French soldiers during the French mandate; consequently, a number of curious and interested Lebanese took on this hobby and started operating under a permit and a call sign provided by the French Authorities.

With Lebanon gaining its independence in 1943, the Ministry of Post and Telecommunications become the issuer of the license to own and operate an Amateur station.

In 2000, there were 230 licensed ham operators in Lebanon, and anyone over 18 years is eligible to acquire a radio amateur license.

Maximum authorised transmitting power is 1,000 watts. The exam is prepared by RAL and is supervised by governmental officials. It comes in three separate parts, which involve multiple choice questions which include theoretical questions on electronics, antennas, and other technical information. Also rules and regulations of amateur radio, and the laws of communication. Also, a test on how to establish a vocal contact over the air.

Their Society is the RAL-- the Radio Amateurs of Lebanon which, like ours represent him or her before the Local authorities and the IARU

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Truly an amazing story of how ham radio can survive even in the midst of geo-political problems that have plagued the Middle East for as long as man can remember. (Q-News)

When I was a novice (circa 1971) there was a movie about an armored car company heist in New York. Living next to the company was a young teen male in a wheel chair that called for help on his HW-101. That is all I remember about the movie, and can't remember the name. Sure would like to see the movie again. At 15, I thought the HW-101 was the cat's meow!

Hi

My TS50 has lost its memory. At every power up it starts at 14.000 USB,
which properly is it's initial state.
But what kind of battery is used for back-up ? I guess it's a 3V something,
but what type would interest me.

Check out a sci-fi movie entitled: "Earth vs. The Flying Saucers". About 30 minutes into the movie our hero, Dr. Russell Marvin tries to contact the outer space creatures on a really neat looking portable radio...

"Dr. Russell Marvin calling on 225.6 megacycles as per instructions..."

Can't get a good look at the rig; maybe someone who sees the movie will id it for the rest of us!

All The Best!

Alain

After 15 years of problem free operation my IC-745 weirded out on me last
night.  The frequency just started increasing (last digit) as if it were
scanning or I was turning the tuning knob slowly.  If you switch to "TS" or
"BAND" mode it continues to increase in freq. but only in larger jumps just as
it would normally do if you were tuning.  The only way to stop it is to push
the dial LOCK button.  All other functions work normally, the xmtr is OK and
the memory backup battery was changed a few months ago.  Please E-mail me if
you have any suggestions?

Thanks,

Frank

Check your mike connections. One of the wires has shorted out and is causing the 745 to scan just like when using a scanning mike. Mine did the same thing.. cant remember which wire it was but it should be obvious when you disassemble the mike connector

I have several sets of pulls (long unused) from local tv station
and several sets of pulls (some unused equipment) from FAA and Air
Force equipment
4cx 250/4cx150

I also have the following radios for sale

Clegg FM 76 rock bound 220
1296 homebrew kit xverter 2 meter in between 2-5 watts out with 5 in
2304 mhz xverter homebrew kit
2304 mhz TWT amp 10 watts out (heavy, shipping costs will be $25)
1296 amplifier 1-5 watts in 400 max out, in a 7 foot rack (LOCAL DFW
only due to weight) needs to be rewired, also runs on 220
2 meter tube amp (4cx2/150) needs rewired has tube supply
no shipping on this amp due to weight dfw area only
2 meter all mode 25 in 170 out transistor 12 volt amp
6 meter 4cx 350(2 tube) amp in a case with power supply
(shipping would be $40) amp has not been turned on in 3 years
power supply was reworked, then lost 6 meter radio

I can be reached via email or phone ONLY not via newsgroups
km5rt@home.com for a few more days, NOT via newsgroups
or by phone 8175143987 after 3pm CST

AMATEUR RADIO NEWSLINE(tm) REPORT #1267 – NOV. 23, 2001

Amateur Radio Newsline report number 1267 with a release date of Friday, November 23rd, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. Six meters suprises the world and the night of the meteors are first on this weeks Amateur Radio Newsline report number 1267 coming your way right now.

(Billboard Cart Here)

**

THE BIG 6 METER OPENING

--
Cold Open Audio Here: N6KNW working Japan on 6 meters
--

That’s Brad Marckwardt, N6KNW, in Santa Clarita California working Japan on Saturday November 17th. No big deal you say? Well the band was 6 meters. It was the wrong time of the year for this kind of D-X. And less we forget, while Brad was working Japan, other hams were making equally amazing 6 meter D-X contacts like California to New York and Alaska to the lower 48. Take a listen:

--
Audio Here: Alaska to California, New York to California
--

The 6 meter DX was not limited to North America. Reports came in from around the world of similar single, double and even triple hop F 2 contacts.

From Costa Rica, Carlos Diez, TI5KD, reports that he started out the day working Europeans including GW4VEQ at about 13:50 UTC. Ten hours later, at 23:05 UTC Carlos crossed the Pacific with his signal, contacting JA4MBM for his first ever Costa Rica to Japan short path QSO.

The experts say that that the current solar cycle peaked in 2000 and that we are on the downside. But it appears that someone forgot to tell the VHF and UHF bands that its not time for D-X. It simply keeps rolling in on 6 meters and above and seems to get better and better with each opening.

Our thanks to Dave Booth, KC6WFS, who took time out from working some of the DX to make the recordings you heard in this report. And less we forget, the six meter band is still opening up almost every day - at least as this newscast is being prepared. (ARNewsline (tm))

**

THE ROCKS IN THE SKY: THE LEONID METEORS AND HAM RADIO

As if the 6 meter opening were not enough to bring bragging rights to many V-H-F enthusiasts, a few hours later came the light show in the sky. It was the Leonid Meteor Shower and hams who enjoy bouncing their signals off the ionized trails of meteors were not disappointed. One of them was Joe Hannigan. WL7M in Fritz Creek Alaska heard commenting during another 6 meter F2 opening:

--
Sound here
--

We do not have any of the sounds of the contacts. Much of it is high speed C-W or computerized using WSJT. But we do have some reports courtesy of the VHF Reflector.

Lets start with Sam Horton, KD4ESV of Bradenton Florida. He says that he was operating from grid square E L 87. Horton says that by 18:23 UTC he had worked twelve states including Alaska.

But that's not all. Tim Marek, K7XC, of Fallon Nevada, operating as a Rover from grid square DM09 had one of the best meteor scatter reports. We don't have time to cover it all, but here are a few stations that he worked starting with KB5XC in DM65, then AA7A in Arizona, K7MI in grid CN73 and W7USB in DN17. Tim added that W1IPL in grid DN62 went in the log along with K5JL in EM15 at about 03:23 AM local time.

K7XC says that all of these contacts were made mobile on 2 meters. Marek used an Icom IC 706 Mark 2 G transceiver driving a 170 watt power amplifier into a yagi antenna on his rover vehicle. Marek says that he spent the entire night chasing QSO's on the space borne rocks. He wrote his report at about 6 a-m local time adding that he intended to crawl into bed and planned to sleep till noon. That is, if his pet cat would let him. (ARNewsline(tm))

**

HAM RADIO IN SPACE: HAPPY BIRTHDAY AO-40

The AMSAT Oscar 40 ham radio satellite has celebrated its first year in space. Then called Phase 3 D, the satellite was launched on November 16, 2000 aboard an Ariane 5 booster rocket from Kourou, French Guiana.

Even though the bird suffered some major damage during an orbital transfer maneuver, it has survived. After several months of work by the team at AMSAT Germany, transponder operation started last May 5th. At that time the U-band and L1-band uplinks were connected to the S-2 transmitter passband downlink via the satellites on-board Matrix switch. Since then, hams on Earth have made hundreds of contacts though the satellite.

AO-40 is currently in a long period during in which the Earth eclipses the Sun near perigee. The eclipses actually began about August 28th, and will rapidly increase in length. They will continue well into June 2002. For the current transponder operating schedule visit:
http://www.amsat-dl.org/journal/adlj-p3d.htm (AMSAT-NA)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, and welcoming the Douglas County Amateur Radio Club's W0UK serving Lawrence, Kansas.

AMERICA AT WAR: FCC GETTYSBURG CHANGES MAIL ADDRESS

We told you it might happen and it has. At least for package deliveries. This, as the FCC's Gettysburg, Pennsylvania office, announces that it has moved its mail handling facilities off-site.

The reason is the same as reported for FCC in Washington and CQ Magazine. Simply a precaution in case some of the strange people that we all call terrorists decide to target the Gettysburg licensing facility.

Its all fairly simple. Effective immediately, all overnight couriers, United Parcel Service and Federal Express deliveries have to go to a new location. That address is the FCC Gettysburg, Rear entrance, 35 York Street, Gettysburg, PA 17325.

The change does not affect US Postal Service deliveries. At least not yet. They will continue to be accepted at the office's physical address on Fairfield Road and diverted to the off-site mailroom. (FCC)

**

AMERICA AT WAR: VANITY LICENSING ON HOLD

I'm Henry Feinberg, K2SSQ, with late breaking news about the Amateur Radio Vanity Call Sign program which is now, effectively, on hold. This, after the recently announced changes in mail handling procedures at the FCC's Gettysburg, Pennsylvania license processing facility.

As reported, mail directed to the FCC Gettysburg office was being held pending the start of special handling precautions to address any biohazards. Now that ARRL has issued a further bulletin on the matter. It quotes the ARRL’s VEC Manager Bart Jahnke, W9JJ. He says that the FCC has processed vanity applications received through October 14. But says Jhanke, vanity applications received after that date remain on hold for now.

There is some good news. The FCC is tracking the receipt date for each piece of mail. Because the agency gives equal priority to paper and electronic applications, all vanity processing was being suspended until the mail situation is resolved. Once the FCC begins opening its backlog of mail, most applications will probably be processed in about 18 days based on date received.

But there could still be problems for another group of filers. These are hams who waited till near the end of the two year grace period on renewing ham radio licenses. Jahnke says applications from those filing for renewal near the end of their two-year grace period will only be accepted for processing if they get to the FCC before the grace period expires.

For the Amateur Radio Newsline, I’m Henry Freinberg, K2SSQ. (ARRL Bulletin, FCC)

**

AMERICA AT WAR: THE PSYCHOLOGICAL SIDE OF RADIO

The media is not only reporting the war against terrorism. According to the Media Network e-newsletter, it has also become heavily involved.

Here in the United States, media organizations like NBC were the first to be targeted by those spreading the anthrax virus. And the e-newsletter says that in Afghanistan, silencing the Taliban's voice and putting in a replacement was one of the first aims of the US led military campaign. That plan seems to be succeeding, with the restoration of "normal" radio services in the key city of Mazar-e-Sharif and a few days later in Kabul itself.

In another development, the psychological warfare broadcasts of "Information Radio" have only been heard irregularly on shortwave. Media Network says that it has contacted those responsible for running the operation to find out its current status.

As soon as Media Network get some updated information, it will be posted at http://www.rnw.nl/realradio/features/html/afghanistan010917.html (Media Network)

**

ENFORCEMENT: FCC VS. RF ELECTRONICS- AN EPILOGUE

The FCC says that it is thanking the owner of R-F Electronics for his decision to stop selling non certified amplifier kits and says that its closing the matter. But the owner of the company does not appear to be ready to say “you’re welcome.” In fact, Sidney Lee Martin, KD4YBC, is using the World Wide Web to launch a verbal counter attack against the regulatory agency. Amateur Radio Newsline’s David Black, KB4KCH, visited the spot in cyberspace and has the rest of the story:

--

Sidney Lee Martin ran afoul of the FCC for allegedly selling illegal power amplifiers for use on amateur HF and 6 meter frequencies. On September 19th, the Commission's Riley Hollingsworth wrote to Martin, telling him to stop the sales -- or face enforcement action.

With the threat of being taken to court and having his amateur radio license put in jeopardy, Martin shut his sales operation down September 25th. And he's taking a few verbal shots at the Commission.

Accusing the agency of being on a jihad, Martin says the FCC attacked and destroyed his business while letting another company continue selling non-certified amplifier kits. Martin says he will use his former business website to provide updates and comments on his tangle with the Commission. He's urging amateurs to ask questions and learn the truth.

In the meantime, the FCC appears to be closing the matter, at least as far as Martin's business is concerned. In an October first letter to Martin, the FCC's Hollingsworth notes Martin's comments that he has stopped selling non-certified equipment and thanks him for his cooperation.

The letter closes with Hollingsworth saying the Commission will review information Martin supplied about other sources selling non-certified equipment.

From Birmingham Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

If you are interested in seeing what Martin has to say about the FCC, take your web browser over to http://members.aol.com/rfelectron/rfelect.htm (ARNewsline)

**

ENFORCEMENT DOWN UNDER: A VERY BUSY ACA

The United States is not the only place where the government has been actively enforcing its radio regulations. So has the Australian Communications Authority -- or ACA. And the figures for the past year are now in and Q-News Graham Kemp, VK4BB, has them:

--

From this years ACA Annual Report we learn that this year, 12 penalties in lieu of prosecution were issued, three are under consideration by the ACA for withdrawal, seven were paid totalling $6,270 Australian, and two went to prosecution. In addition, prosecution proceedings without issuing penalties in lieu were instigated against six other persons for a total of 22 offenses.

During the year, the ACA conducted 1,200 Radiocommunications licence investigations, resulting in the issue of 267 verbal and 557 written warnings. No licence suspensions or cancellation actions were undertaken this year.

The ACA also investigated 781 complaints of interference to Radiocommunications services, and search and rescue authorities were assisted with the location of approximately 104 emergency
position-indicating radio beacons. Although careless handling or faults caused many of these, 21 beacons had been maliciously activated with the intent of disrupting emergency services.

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Be it the United States, Australia or anywhere else, the same words always apply. Don’t do the crime if you cant pay the fine. (Q-News, ACA)

ARRL NEWS: THE BIG PROJECT EXPANDS

Some good news out of Newington. This, with word from the ARRL Schools wishing to take part in the Big Project can contact Jerry Hill, KH6HU at ARRL Headquarters, Field and Education Section, 225 Main St., Newington Connecticut, 06111. You can also find them in cyberspace at www.arrl.org. (ARRL)

**

ARRL NEWS: THE 2001 ARRL DIVISIONAL ELECTIONS

The results are in for the fall 2001 ARRL divisional elections and there are really no big surprises. In the Southeastern Division, Georgia Section Manager Sandy Donahue, W4RU, of Atlanta, Georgia, outpolled West Central Florida Assistant Section Manager Paul Toth, NA4AR, of Seminole, Florida by 478 votes. The final count was Donahue at 2783 and Toth at 2305. Both were contending for the seat being vacated by Vice Director Evelyn Gauzens, W4WYR, who decided not to seek a new term after 22 years of service.

In the Southwestern Division, San Diego Section Manager Tuck Miller, NZ6T, of National City, California, defeated Ned Stearns, AA7A, of Scottsdale, Arizona. The vote was 2485 to 2208. Miller assumes the vice director's position being vacated by Art Goddard, W6XD, who ran unopposed for director.

Last but by no means least, incumbent Pacific Division Vice Director Bob Vallio, W6RGG, of Castro Valley, California garnered 1924 votes to beat back a challenge by Gerald D. Griffin, K6MD, of Pacific Grove, California. Griffin polled 1225 votes. All those elected officially take office on January 1st, 2002. (ARRL)

**

HAM INDUSTRY NEWS: ELECRAFT IMPROVES THE K1

Elecraft's very popular K 1 compact CW transceiver has just became a four-bander. In addition to the 2-band version, the rig is now available with a single band-switched module that covers 40, 30, 20, and either 17 or 15 meters. No hardware or firmware changes are necessary to use the 4-band module and the module can also be ordered as an option to upgrade existing K 1 transceivers. For more information or to order, visit www.elecraft.com or e-mail sales@ elecraft.com. (Elecraft release)

COMMUNICATIONS BUSINESS: MORE LAYOFFS AT MOTOROLA

High tech giant Motorola has announced that it is reducing its work force by another 7,000 jobs, including an unspecified number of layoffs. The announcement came a day after the telecommunications giant reported a $1.4 billion loss for the quarter ended September 30.

Faced by a weakened economy and slower industry growth in worldwide cellphone sales, Motorola already this year had announced 32,000 job cuts to a work force that stood at 147,000 last December. That would increase the total cuts to 39,000 and trim the work force to approximately 108,000 by the end of the year - a reduction of about 26 percent. A company spokesperson indicated there could be more. (Published news reports)

**

HAMFESTS AND CONVENTIONS: SUPERFEST 2002

The Amateur Electronic Supply 8th annual Superfest open house is now slated for April 5th and 6th 2002 at the AES store in Milwaukee Wisconsin. According to a note from Molly Schreiber of AES, manufacturer representatives will be on hand displaying their wares and several forums are being scheduled. And as in years past, ham radio clubs are being invited to participate with free display space. Information on this and more is at the AES Superfest website. Its a long URL. Its in cyberspace at /www.aesham.com/superfest/sf.html. (AES Release)

**

RADIO PUBLICATIONS: DEPARTURE MESSAGE

CW aficionados attention. This one is for you. It’s a new book called Departure Message by Charles Lunsford that tells the story of an enlisted aircrew member flying as an Airborne Radio Operator in the 1950s.

Lunsford’s book traces one of the last of the Radio Operators trained in International Morse Code and who flew in the last aircraft purchased by the United States Air Force which had a Morse key as standard equipment. The book also describes some of the radio and radar aids of the time and the first top-secret transponders for identification.

Departure Message is published on-line by greatunpublished.com and is available in paperback or for download. More information is on the web at greatunpublished.com. (Charles Lunsford)

**

EMERGING TECHNOLOGY: APPLE I-POD

Apple Computer has unveiled a revolutionary new portable music player that can hold an entire music collection. It also takes Apple outside its core computer business for the first time in eight years.

The Apple "i-Pod" is the size and shape of a deck of cards, with a small LCD screen and round dial on a white front and a stainless steel back. It holds about 1,000 songs in the MP3 music format and has a battery life of 8to 10 hours.

The only negative. The “i-Pod” currently will only work with Apple Macintosh computers, but that may change. About 7 million existing Macintoshes have the necessary hardware and software to be compatible with iPod. Apple president Steve Jobs says the company is considering porting it to windows based machines as well. (Apple release)

**

TECHNOLOGY FAILURE: COMPUTER FAILURE AT THE CALTECH USGS EARTHQUAKE MESSAGING SITE

A 5.1 magnitude earthquake near Anza California on October 30th should have generated an almost-immediate e-mail message to all southern California Seismic Network e-mail subscribers. However, this particular message was delayed about seven hours due to a catastrophic network hardware failure that occurred minutes before the shaker.   To subscribe to this free and usually reliable reporting service, see http://pasadena.wr.usgs.gov/latest/mailing_lists.html (CGC Communicator)

**

INTERNATIONAL - FRANCE: ARISS-EUROPE QSL ADDRESS

The ARISS-Europe QSL Bureau's address has changed. Effective immediately, all European requests for ARISS QSL cards are to be addressed to AMSAT - France, 14 bis, rue des Gourlis, 92500 Rueil Malmaison, France.

Those applying for a QSL should include a self addressed envelope and two International Reply Coupons to cover the handling cost. The ARISS-Europe QSL Manager is Christophe Candebat, F1MOJ. His email address is F1MOJ@aol.com. (ON1CAU)

**

INTERNATIONAL - AUSTRALIA: VK 80 METER SSB BAND TO BE EXPANDED

The Australian 80-meter SSB 'DX Window', at present limited to a 4-kHz segment around 3798 kHz, is due to be expanded - but not until 2004. Jeramy Boot, G4NJH, has more:

--

The Australian 80-metre SSB 'DX Window', at present limited to a 4-kHz segment around 3798kHz, is due to be expanded - but not until 2004. In Australia, the band 3700 - 3800kHz is presently allocated to the commercial land mobile service, effectively limiting amateur SSB operation to a single frequency. Following an approach by the Wireless Institute of Australia, the Australian Communications Authority has agreed to proceed with a change in the allocation of the band 3776 - 3800kHz. The ACA's intention is to reallocate this band to the amateur service on a primary basis from the 1st of January 2004. Jeramy Boot, G4NJH.

--

Current commercial users of that spectrum won’t be left out in the cold. They will be moved to existing land mobile spectrum adjacent to the new amateur band by the end of December 2003. (RSGB)

**

SPECIAL EVENTS: K7A PEARL HARBOR DAY STATION

Pearl Harbor Day will be celebrated in the ham radio world December 7, 8 and 9, when Special Events Station K7A comes on the air from Phoenix Arizona. K7A will be operational on most High Frequency bands. More information is posted on www.aztenx.org (Superstition ARC)

**

DX

In-D-X, Jim Weidner, K2JXW, who is the founder and president of the Amateur Radio Lighthouse Society announced the groups second annual Lighthouse Christmas Lights QSO Party. The event is scheduled for December 22nd to the 23rd. For more information please visit www.arlhs.com on the world wide web. (News release)

**

THAT FINAL ITEM: VK HAM RADIO IN THE AIR ON THE AIR

And finally this week, the story of the celebration of an old airplane and the part played by ham radio. It was an unusual job for hams. Again, from Australia, Q-News Graham Kemp, VK4BB:

--

VK4's Redcliffe & Districts Radio Club Inc. ran a radio link, at the request of Redcliffe City Councillor Ian Poyitt, from an aircraft to Redcliffe Radio Station 99.7 FM. The Link commemorated the 70th anniversary of the Tiger Moth. There was approximately 100 old aircraft participating in this rare fly-past.

--
Flight Audio Here
--

A hand held scanner's audio was fed directly into the mixing desk. A 2 meter radio using a quarter wave antenna from the aircraft, then a crossband link to take the 2 meter signal from the aircraft and retransmitted this on 70cm using the clubs new Yaesu FT-847.

The flight went off without a hitch with Steve Harris VK4HRS as the Aeronautical Mobile Announcer, having flown for the first time and enjoyed himself immensely.

--

Well done Steve and all at the Redcliffe Club. (Q-News)

Hi everyone!

After almost ten years working good with my Kenwood TS-140S, it now uses to become deaf suddenly when turnig from TX to RX as it normally warms after 15 minuts transmitting in a normal QSO.

Such a receiving malfunction right after transmitting seems to be as a result of an antenna commuting or switch relay failure while the cabinet's bottom heats up or something, but it resumes with an open hand slap and casual clapping in the top.

When transceiver is cooling down enough, then it works normally back again.

Any suggestion?

Please... I need somebody's help.

Thank you very much in advance.

When you say it is mute, do you mean that there is just no speaker audio, or is it staying in transmit mode?

I am looking at my schematics, love my TS-140S, you might want to check K16 on the Filter Unit (X51-3040-11). This one switches the RF path for Tx an Rx. If this one doesn't switch to Rx, then the incoming RF goes to the output of the RF amp. Not good. I am assuming a mechanical relay problem since hitting the rig causes proper operation.

You might want to try reseating connectors.

Another relay in the receive circuit switches the attenuating resistor in and out and is controlled by the 'ATT' switch on the front panel.

All APRSers,

Check out the APRSPoint software on www.aprspoint.com. It utilizes Microsoft MapPoint to provide high quality, detailed street map data, and it integrates MapPoint in an easy to use interface. You can do address lookup, point to point routing with MapPoint, and it offers better maps than Street Atlas. Right now you can get Microsoft MapPoint trial version for $9.95 for 60 days. APRSPoint implements the latest APRS standard, and supports position, status and weather reporting. You can also do APRS messaging with it. It supports AGW packet engine to use sound card as TNC in addition to standard serial TNCs. It does station tracking, signal range plot and has GPS tracking capabilities. For details, go to the website and get the free APRSPoint trial software. thx.

"Jeff Pierce" <piercejhsd009@earthlink.net> escribi� en el mensaje news:3C030942.79A30D77@earthlink.net...

> When you say it is mute, do you mean that there is just no speaker
> audio, or is it staying in transmit mode?

Well, I can listen to transceiver just when receiving the strongest signals by turning sound's volume control AF in full position as S meter doesn't even move.

So it behaves as the antenna coax would be disconnected itself from the equipment.

On the other hand I did set slide switch (S-1) on the signal unit to ON as shown in the diagram (Page 36, 6-6-8 'Linear Amplifier Control') in order to obtain a stronger relais's commuting RX-TX and viceversa. I don't know the pourpose for the other switch (S-2) ON-OFF, but by turning S-1 from OFF into ON the problem was fixed in a temporary basis as the trouble the suddenly returned again.

> I am looking at my schematics, love my TS-140S, you might want to check
> K16 on the Filter Unit (X51-3040-11).

Where is it located within the transceiver? I found it in the schematics diagram but now I'm trying to hunt it inside down the hardware. Will you please tell what page number or chapter is at the Instruction Manual?

By the way, an optional CW Filter was installed there so I will better check it too. Who knows?

> This one switches the RF path for
> Tx an Rx. If this one doesn't switch to Rx, then the incoming RF goes to

> the output of the RF amp. Not good.

God willing, I think it is not the case. Transceiver succeeds in
receiving, but quite often not in full.

> I am assuming a mechanical relay
> problem since hitting the rig causes proper operation.

That is correct just in part, but cooling downn is causing a proper
operation for the rig, nor a warming up I fear.

> You might want to try reseating connectors.
>
> Another relay in the receive circuit switches the attenuating resistor
> in and out and is controlled by the 'ATT' switch on the front panel.

Yes, I use to push ATT switch ON when operating in 40 meters band to
atenuate strong signals there but problems lightly began almost a couple
of years ago by using the rig for packet radio in FM. Then, operating in
AM and now... SSB too.

Today it is not so easy to manipulate an up to date technology
transceiver, no matter if it was made last XX th century but we are not
talking about a Heathkit device... so I'll keep the transceiver switched
ON to get it warmed in RX position for a couple of consecutive days or
more, in order to maintain RX-TX switch relay warm in receiving position.
Then I will see what happend.

It is more than probably that I must find a good Kenwood service here in
Madrid.

Thank you very much indeed for your help, Jeff.

I have a 12 year old TS-680 which is a '140 with 6M capability.

In my radio, the relay contacts which switch in the ATTENUATOR resistor are becoming unreliable. The receiver gain is noticeably lessened. The only fix (other than replacing the relay, which I plan to do) is to activate the ATTENUATOR button several times in an attempt to 'wipe' the contacts clean.

I'm speculating that because the relay contacts essentially never carry any significant current, over time they become oxidized. Anyone have any thoughts?

Ken, VE3FIT

::
::When transceiver is cooling down enough, then it works normally back again.

suggest:

get can of ''freezer spray'' from any good electronic supplier with
the small nozzle-tube for accurate spraying

think logically where the fault might be.

wait for the txrx to warm up.

using short spray-bursts spray a small section of the txrx each time

when the fault seems to have ''cured'' wait for it to warm-up agin
and repeat the spray.

eventually you will be able to spray the exact componnet causing
the problem.

remember that freezer spray will cause 'dampness' so you should
allow your txrx to really warm up and 'dry out' before too many
sprays with freezer.

you can do the opposite (extra-fast warm up) with a soldering iron
but remember to watch for short-circuits !!!

A friend told me he had heard that General Electric CB radios can be modified to 2 meters easily. Can anyone tell me about this? Or is it more likely 10 meters?

Yes, you're right. Similar problems trying to switch microphone circuits
in broadcasting, so it's never done.

Mike

More likely 10 meters. To convert to 2 meters would require significant reengineering of the radio.

I did the calculations once to see how far two 1 watt HTs would go in
free space. As I recall it was something like 1000 miles.

It's all the things here on the ground that get in the way that cause
the problem.

Jim

Maybe Keith should just scan/listen to the outputs. That might
narrow it down. Then try those that he can hear. Of course,
with 1/2 w, he can hear a lot more that he can talk to.
With that, I would only try the closer(st) ones.

AMATEUR RADIO NEWSLINE(tm) REPORT #1263 - OCT. 26, 2001

Amateur Radio Newsline report number 1263 with a release date of Friday, October 26th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL says to get ready to fight to protect the 70 centimeter band and the FCC says to stop sending paper to its Washington office. These stories are first on Amateur Radio Newsline report number 1263 coming your way right now.

(Billboard Cart Here)

**

FORCED SPECTRUM SHARING: BATTLE LOOMS OVER PART 15 ACCESS TO 425-435 MHZ

The American Radio Relay League says that a battle is looming with the FCC over the agency’s proposes changes to its Part 15 rules governing unlicensed devices. Changes that would allow operation of advanced radio frequency identification devices between 425 and 435 MHz. And it could spell the word trouble for ham radio as we hear from our South-East Bureau Chief, David Black, KB4KCH.

--

The ARRL Letter explains the League's position. The FCC has decided to grant a request made earlier this year by SAVI Technology Inc. SAVI wants to us the spectrum for radio frequency package identification tags. To help make that happen, the FCC is issuing a Notice of Proposed Rule Making.

In comments on the VHF Reflector, Russ Pillsbury, K2TXB, discusses SAVI. He describes it as a big, multi-national company with significant worldwide funding. Pillsbury also says SAVI has large United States defense department contracts as well.

SAVI Technology sells radiolocation and wireless inventory control products. SAVI says it needs the rules change to meet customer demand for increased radio frequency identification system capabilities. And the FCC says it agrees with SAVI. The Commission says changes to its Part 15 rules would allow more advanced radio frequency ID systems on the 433 MHz band and would serve the public interest.

The Commission proposes creating a new section to Part 15. It would allow operating radio frequency ID systems between 425 and 435 MHz. Transmissions could be up to two minutes at a time. Maximum field strengths would be at the level now permitted only for extremely short-duration, intermittent control signals. And that's what ham radio operators don't like. They see that as a high potential for interference to Amateur Radio operations nationwide. And it's why the ARRL fiercely opposes the rules change.

The League takes a strong stand. The ARRL says the FCC has set the stage for another battle between amateur and commercial interests. League Executive Vice President Dave Sumner, K1ZZ, accuses the FCC of not having thought this one through. Sumner normally expresses ARRL Board policy. He says the Part 15 radio frequency identification proposal is: "contrary to the whole philosophy of the Part 15 rules."

Sumner says the radio identification devices SAVI proposes belong on other frequencies--specifically, those authorized for use by devices regulated by FCC Part 18 rules. Those regulations cover Industrial, Scientific and Medical devices. The FCC counters, saying the proposed rules change dealing with the ID systems is to harmonize its own rules with those in other parts of the world.

But Sumner fires back. He says 433.9 MHz is allocated for Industrial, Scientific and Medical devices only in ten European countries but not in the rest of the world. And it is not permitted in North and South America which make up I-T-U Region 2.

From the South East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

Another portion of the proposed rules change involves the Industrial, Scientific and Medical frequency allocation at 13.56 MHz. Dave Sumner says at first glance that proposal might permit increased emissions in the bottom 10 kHz of the 20-meter amateur band. Sumner adds that the ARRL will take a closer look at this section of the overall proposal before assessing its interference potential. The entire Notice of Proposed Rule Making and Order is contained in ET Docket 01-278 is available on the FCC website at www.fcc.gov and the ARRL Website at www.arrl.org. (ARRL, K2TXB, VHF Reflector)

**

FORCED SPECTRUM SHARING: FCC ISSUES 430 MHZ EXPERIMENTAL LICENSE FOR SOCAL

Hams in Southern California are on alert after the FCC issues an Experimental License to Digital Wireless Corporation in Los Angeles to test its systems in the 420 to 430 MHz Amateur Radio band. Digital Wireless Corporation is a manufacturer of secure, all-digital, Internet-linked trunked and non-trunked dispatch radio equipment that provides secure conversations and seamless network coverage for business, government and military users. The license with the call sign W-C-2-X-K-K permits holder Brent Jaybush and Digital wireless to operate within 5 km of their factory in Los Angeles through February 01, 2003. (FCC, ARNewsline(tm))

**

FORCED SPECTRUM SHARING: ARRL - NO COMMERCIAL USERS AT 2390-2400 MHz.

The ARRL says that it urges the FCC -- ‘in the strongest possible terms' -- to make no commercial allocations in the 2390 to 2400 MHz primary Amateur Radio Service allocation. In a bulletin to its members released on Wednesday, October 24th the League did however tentatively suggest hams might be willing to share the band with compatible government services that are displaced to make room for advanced wireless systems.

In its communication to the regulatory agency, the ARRL tells the FCC that advanced wireless systems are fundamentally incompatible with continued amateur access to the band.' The ARRL says the federal government 'has historically been a compatible sharing partner and that government uses would offer 'the least disruptive opportunities for sharing' in the band. (ARRL Bulletin)

**

RESTRUCTURING: NEW LICENSING REGS IN NEW ZEALAND

It’s a nation that now only has two license classes and a 5 word per minute code test. This as New Zealand joins the worldwide move toward simplifying the entry to ham radio. Amateur Radio Newsline’s Jim Meachen ZL2BHF has more:

--

The introduction of New Zealand’s Radiocommunications Regulations 2001 has brought changes for Amateur Radio Licensing in New Zealand. Forthwith there are only two classes of Amateur Radio Licence available -- The Limited and The General. The Novice and the Novice/Limited licences grades have been removed.

The Limited licensing procedure remains unchanged and the General licensing procedure is changed by the lowering of the Morse Code test to 5 words-per-minute. Novice and Novice/Limited licences will no longer be granted. Existing licences in these categories will remain valid under the new Regulations and with their original licence provisions.

New Zealand’s Licensing Authority the Ministry of Economic Development is encouraging existing Novice and Novice/Limited licensees to review their qualifications to see if they now meet the requirements of the new General Licence.

Amateur who have passed the previous Novice Morse test of 6 wpm and attained a pass of 50% or more in the theory and regulations examination, or 66% or more in the new multiple-choice computer-generated examination now meet the requirement for a General Licence and can immediately submit an application for an upgrade.

The existing ZL callsign grouping that indicates the class of licence of the holder will remain in force. This will require all licensees upgrading to a General licence to obtain a new callsign.

Included in the new Regulations is a long awaited provision for variation to the manner in which an amateur examination is carried out if there is need to vary the examination process for a candidate with a particular disability. Variation will be at the Chief Executive's discretion and the Ministry will deal with each case as it arises.

It is expected that the New Zealand Association of Radio Transmitter Morse Examiners will test at 12 wpm on request for those who may wish to meet this higher operating standard for overseas travel.

From Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline.

--

With more and more nations turning to 5 words per minute Morse testing, it appears as if it will soon be the standard -- worldwide. (NZART, ZL2BHF)

RADIO AND THE WAR: FCC STOPS ACCEPTING FILINGS IN ENVELOPES

If you are planning to write to the FCC in Washinton D-C – the word is – don't. This as the agency issues a public notice saying that filings enclosed in envelopes will not be accepted until further notice.

The reason is the same as the one CQ Magazine stated last week when it said it will no longer accept mailed in paper logs – the possibility of bio contamination. And while the FCC notice makes no direct reference to the anthrax scare, the Broadcasting and Cable newsletter says most view it at as a precautionary.

In a nutshell, heres what the FCC says to do. Document filers and messengers delivering paper communications to the agency will be asked to dispose of envelopes in a receptacle outside of its Washington, D.C., headquarters. Mail and packages delivered to the agency will be opened at an off-site location. If you must send a paper filing to the FCC, the only way it can be done is by clipping the papers together with a rubber band or other fastener with no envelope. Then you either hand carry it or courier it to 9300 East Hampton Drive, in Capitol Heights, Maryland. Those requesting confidential treatment of their documents must have materials placed in commission-provided envelopes. The FCC also says that filers have the option of submitting any document electronically.

And what about filings by U-S Mail to the Gettysburg Licensing facility in Pennslvania? Items like ham radio license renewals and the like? According to the ARRL Letter, the public notice on FCC mail makes no mention of any change in procedures regarding filings in envelopes to Gettysburg, but that could change at any time. (Broadcasting & Cable, ARRL)

**

RADIO AND THE WAR: RADIO SOLO HEARD IN THE USA

Last week we reported that the United States has been air dropping Bay Gen wind up radios into Afghanistan. We also said that the government six EC-130 planes that make up the Air National Guard's Commando Solo fleet serve as flying radio stations. Now we can give you an idea of what the airborn transmission to the Afghan populations sounds like. Take a listen:

--
Audio here
--

That signal was reportedly recorded by a shortwave listener on the U-S East coast on October 18th and posted to the Internet. And while we do not know exactly what’s being said, an English translation posted to the Pentagon’s website indicates its probably a transmission to Taliban fighters and might well say: “When you decide to surrender, approach United States forces with your hands in the air. Sling your weapon across your back muzzle towards the ground. Remove your magazine and expel any rounds. Doing this is your only chance of survival.” (shortwave.com, ARNewsline(tm))

**

RADIO AND THE WAR: A RUN ON RADIOS

One of the hottest selling consumer electronic items since September 11th is the scanner radio. According to several news reports, the people buying them say that it gives them a sense of security knowing what’s taking place in the community in light of the terror attacks on New York City and the Pentagon.

One story says that the Radio Shack chain, based in Fort Worth, Texas, has reported a major increase in sales. The same with such dealers as Scanner World USA, a mail-order business based in Albany, N.Y., and Uniden America Corp. of Fort Worth. In fact, some retailers report sales are up 10 percent to 30 percent compared with the same period last year.

That article quotes Norm Schrein, KA8PGJ, who is president of the Bearcat Radio Club in Dayton, Ohio. Schrein says he went to a trade show in Peoria, Illinois, four days after the attack. Business was so brisk that his stock of scanners was all but cleaned out.

But scanners are not the only hot product running off dealer shelves these days. All-band shortwave radios are running a close second. According to one news story the lure of shortwave receivers is that they allow for listening to broadcasts from around the world, including airline, shipping and military communications. Other reports say that shortwave gives the public yet another avenue to get news items not regularly reported by the U-S press. (Various published news reports)

**

ENFORCEMENT: DON’T USE ILLEGAL GEAR FOR BUSINESS

A Kentucky towing company is told to stop using the ham bands to communicate. This after the FCC receives complaints that the company’s trucks have been heard on 10 meters. Riley Hollingsworth, is the FCC’s Special Counsel for Amateur Radio enforcement matters:

--
Hollingsworth: “We sent a warning notice to STI Towing and Repair in Walton and Florence Kentucky about using 10 meter Amateur equipment in their business operation. Related to that, we sent a warning to an employee licensee of the company [named] Robert McCoy, N4ZTA of Florence Kentucky about the same matter.

Now that employee may have equipped the trucks wth unlicensed equipment. The trucks are tow-trucks number 21, 27, 52, 97, 99 and RR4 operating in the Walton and Florence Kentucky areas.”
--
STI Towing and Repair was given the usual time to respond. (FCC, RAIN)

**
ARRL MEMBERS: THE LEAGUE NEEDS YOU IN THE CC&R EFFORT

If you are an ARRL member, listen up. This one is for you.

Have you ever been denied the ability to put up an antenna, or to operate an Amateur Radio transmitter? Have you had any other restriction on your Amateur Radio activities because you live in a housing development or condominium complex governed by private land use regulations? Well, the ARRL Board of Directors has adopted a goal of trying for legislative action that helps overcome the unreasonable restrictions of C-C-and R’s that prohibit or restrict Amateur Radio antennas. And you can help. Heres how.

According to the ARRL Letter, the league has a sample letter at its website. That’s in cyberspace at www.arrl.org. If you are affected by a CC&R, or know someone in your Congressional district who is, please adapt the sample letter to your own situation and consider sending it to your member of Congress. And if you decide to write please send a copy to the ARRL's Office of Legislative Affairs.

To find your Senator's mailing address check www.senate.gov/contacting/index.cfm. To find your Representative's, check www.house.gov/writerep. (ARRL)

**

AWARDS: DARA OPENS NOMINATIONS FOR HAM OF THE YEAR

The Dayton Amateur Radio Association says its opening the nominating period for the 2002 Dayton Hamvention Awards. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

The Radio Amateur of the Year is described as the special person who has made a long term commitment to the advancement of amateur radio. We are looking for a well-rounded individual who has contributed to our hobby in some outstanding way. The Technical Excellence award is for the person who has made an outstanding technical advancement in the field of amateur radio while the Special Achievement Award is reserved for the ham who has made an outstanding contribution to the advancement of amateur radio. This latter award is usually given to a respected amateur who spearheaded a single significant project.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations can be submitted by US Mail to Post Office Box 964, Dayton Ohio 45401 or by completing the convenient e-form on the web at www.hamvention.org. (DARA)

**

NAMES IN THE NEWS: HAP HOLLY KC9RP TO SPEAK IN L.A.

If you live in the Los Angeles area, and have never had the opportunity to meet RAIN Producer Hap Holly, KC9RP, you will have you chance very soon. This as Hap and his wife Stephanie venture west to the City of Angeles for a speaking engagement by KC9RP.

Hap will be the guest of the TRW Amateur Radio Club at its Thanksgiving Awards Banquet the evening of November 10th. There is one caveat. This event is for active TRW Radio Club members and their guests only. More information is on the web at www.w6trw.com under the subject Annual Banquet. (ARNewsline(tm))

**

NAMES IN THE NEWS: W4WYR NAMED A “CHAMP”

The ARRL Letter says that Southeastern Division Vice Director Evelyn Gauzens, W4WYR, is the recipient of the 2001 Citizens' Ham Mobile-Marine Patrol or CHAMP Award. Gauzens was selected for her work as co-founder of the famed Miami Tropical Hamboree ham radio convention and as being a prominent community activist. The South Florida FM Association, Citizens' Crime Watch, and the Miami-Dade Police Department established Citizens' Ham Mobile-Marine Patrol in 1994. (ARRL)

**

EMERGING TECHNOLOGY: HIGH SPEED INTERNET CONNECTIONS GROWING

It won't ever replace ham radio for versatility, but high-speed lines connecting people to the Internet increased by 63% during the second half of year 2000 That’s a total of 7.1 million new connections. Of the 7.1 million high-speed lines, 5.2 million were residential and small business subscribers. The CGC Communicator says that the rate of high-speed growth for the full year of 2000 was 158%. (CGC Communicator)

**

ON THE AIR: CULBERTSON A HIT AT JOTA 2001

Astronaut Frank Culbertson left a global trail of excited Scouts the weekend of October 20 th as he made rapid-fire QSO's during the worldwide Jamboree-on-the-Air. The commander of the Expedition Three crew on board the International Space Station used the NA1SS call sign to rack up contacts in many places including Australia. There on Saturday, the 20th, Tony Hutcheson, VK5ZAI, took a portable station to the Riverland Scout Hall where a crowd of about 60 watched as one of the senior Girl Scouts asked Culbertson a question. Back here in the United States, sixteen Boy Scouts from Troop 48 in New Orleans gathered at the station of K5CFW, to pull off a quick QSO.

On the early afternoon pass over the U-S, KD4SFF, using the phonetics "Scouting for Fun," set up a station in his backyard in Greenville, South Carolina. He had five Scouts from Boy Scout Troop 555 over. Frank told one of them that he had grown up in South Carolina, and that he, too, had been a Scout.

Culbertson has been very active on the 2 meter band from the ISS. He talks to several schools each week as well as numerous open QSO’s worldwide. (AMSAT)

**

HAM RADIO IN SPACE: NEW STATION AT UK NATIONAL SPACE CENTER

A new Amateur Radio Satellite Service ground station has been opened at the United Kingdom’s National Space Center in Leicester. Using the call sign GB2NSC the station will operate at the heart of the center in the 'Space Now' attractions area, That’s the same location where the National Space Center Amateur Radio Society is demonstrating how to contact amateur radio equipment on board the International Space Station. (GB2RS)

**

SCIENCE AND SPACE: NASA’S GOLDIN ANNOUNCES RETIREMENT

Daniel Goldin, who pushed NASA to be leaner and faster and then came under fire for it, says he will retire from the space agency next month. after nearly 10 years in the job. The longest-serving administrator of the National Aeronautics and Space Administration Goldin will leave in mid-November with a record of 160 successful space missions international space station that is now permanently occupied. Cost over-runs in the billions of dollars are said to have contributed to his leaving the agency. (Published news reports)

**

INTERNATIONAL: WINLINK ILLEGAL TO OPERATE IN VK

It appears that the very popular WINLINK messaging system is illegal to use in Australia. WINLINK is a program and intertie network that provides full-featured digital E-mail transfer, position reporting and weather service to the global amateur radio community where Internet access is not available. But as Q-News Graham Kemp VK4BB, tells us, the Australian Communications Agency says – “no!”

--

In news services this week we see the WIA's Federal Technical Advisory Committee Chairman John Martin VK3KWA reminding operators it's "just not on" to operate this program "down under". John has had discussion with the ACA on the topic, it's not a simple matter of changing the amateur regulations, rather the issue is tied in with legislation including the Telecommunications Act.

John concludes that in the short term there is no chance whatsoever of any change in the ACA's ruling that Winlink is illegal in Australia. Packet radio bulletin board operators should also be very careful about forwarding any Winlink traffic, and preferably filter it for manual checking before allowing it to go through.

--

Currently there are WINLINK nodes in the United States and nations worldwide. The one major exception is Australia. For the rest of the world where it is legal, more information is on the web at www.winlink.org. (Q-News)

**

ON THE AIR: LONG PATH FRIENDSHIP NET.

In this time of turmoil a group of hams from around the world are going to try to bring some light to the end of a rather dark tunnel. This with a new on-the-air fellowship gathering called the Long Path Friendship Net.

The net will start at 1430 UTC, Sundays on 14.165 MHz with K6HAE and WTZ in California and ZS6AN in South Africa as control stations. The founders say that this is a big planet and there are enough natural disasters to be dealt with as well as some sad man-made ones for which the proficient and friendly radio operator is a valued contributor.

Again, that’s the new Long Path Friendship Net every Sunday at 1430 UTC on 14.165 MHz in the Extra segment of the 20 meter band. (Press release)

**

DX

In DX, the ARRL’s DXCC Desk reports that the ZK1NDK North Cook Island operation now good for DXCC credit. Hams who submitted request for ZK1NDK and were denied credit may contact the Leagues DXCC desk and have their records updated without having to resubmit cards. (OPDX, Daily DX, others)

**

THAT FINAL ITEM: REAL SKY HOOKS

And finally this week, you may find this one hard to believe, but its true. It comes under the heading of an honest to goodness sky hook -- and no we are not kidding. Bill Pasternak, WA6ITF, has more:

--

The proposal for these sky hooks comes from ATG industries in southern England. It wants to build reflective airships and have them operate at a height of 65,000 feet.

These craft would be unmanned and would station keep using solar powered electric engines and a lightweight diesel engine. ATG claims that these "skyhook" ships could keep position for up to 5 years. That they could act as a transponders for services such mobile telephones, broadband internet and digital radio.

ATG estimates that nineteen of these sky hook ships could cover most of the U.K. and replace as many as 4000 mobile telephone poles and up to 10,000 towers that are expected to be needed for the new G-3 technology.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Its not known how long these sky hook ships will take to develop or if they will ever be deployed. (Telecom Daily)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio

Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at
www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, this advisory. The Amateur Radio Newsline Incorporated is not soliciting for affinity credit cards in our name or that of the old Westlink Radio Network. Nor are we telemarketing amateurs to sign up for any affinity credit card.

If someone calls you trying to get you to sign up for a credit card supposely sponsored by the Amateur Radio Newsline, get all the information you can including the full name of the telemarketing representative, information on sponsoring organization and the bank issuing the card. Then say no, hang up and drop us an e-mail with the details. We will take it from there.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, saying God Bless America, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2001. All rights reserved.

... and in the air... Remember, free space calculations do not take
into account the effect of the atmosphere. Plenty of attenuation of
the signal due to normal atmospheric particles... Lots of energy
absorbed by atmospheric gases... 1000 miles on 1 watt is great in the
near-vacuum of space, but in an atmosphere like ours, there's no way -
even if there were NO terrain effect...

I am not sure how much lose there is in the air, but many have worked way over 1000 miles with 1 watt on the low bands. Don't know the distance but I worked from the middle of North Carolina to Flordia on 2 meter ssb and the station on the other end was running 1/2 watt. Told him it was hard to believe as he had about the best signal on the band so he stepped the power up to 10, then 100, then the legal limit just to prove it. While this is not all air at 1 atomsphere pressure the signal still passes through a lot of air. It is still the curve of the earth and the hills and mountains that get in the way for earth bound communications on the higher frequencies where the ionosphere does not help the signal bounce. Some of the newer hams around here have used the FRS radios (not sure of the power but know it is less than 1 watt) for contacts over 100 miles. Granted one of them was on Mt. Mitchell (highest point on the east coast). I have worked sevearl airplanes where HTs were being used and best DX sofar was around 225 miles. Plane was over 30,000 feet.

Not to be picky, but the victim actually wasn't a ham, but "borrowed" a call to keep in touch with his mainland buddy, he and his gorlfriend were murdered buy a young man whom had sought refuge from the law on the island, but came ill equipped, at least according to the murderers girlfriend.

Doesn't one of the first bruce willis cop movies feature " a cb that even covers the police channels" at least according to the limo driver.

Dan
movie called "And the Sea Will Tell" (based on a true

Hi Ed and Group!

My Tek 492 documentation says that for instruments B053574 and below, this interface has no function. The 492 documentation is extensive, but if you have a unit above this S/N I'll try to find some additional info for you. Mine is above this S/N but to answer your question directly, I have not tried to use it.

Best regards,
Ben

Geeze.."Depends Day" was a "B" grade movie made by Saliva Sally and Wrong
Way...She still resides in a dental rental in Hiram, Georgia. Sally Saliva
holds a Novice ticket and can often be heard (illegally) in the General
portions of the Ham bands.
Sally and her latest love, The Enjunear, are often heard bouncing around the
220 MHz areas of the Novice Band...they use this band to coordinate stops at
the local liquor stores and check-cashing outlets.
Saliva Sally has made at least one movie for which she is most famous.
For more information about Saliva Sally's movie, look at Mike's Package
Store agenda for show times.
Now we have to determine if she is "Sally Saliva" or "Saliva Sally". Only
Wrong Way knows for sure....

Hello there

YOUR FACE HERE.FOURTH ESTATE NOV.1

The definitive guide to the history and location of Britain&#8217;s most famous cult movies, from A Hard Day&#8217;s Night to Trainspotting, with dozens of new interviews, unseen photographs, maps and film sites &#8211; and how to find them. 'You&#8217;re a big man, but you&#8217;re in bad shape'; 'I demand to have some booze!'; 'Choose Life...' A Hard Day&#8217;s Night, If, Performance, A Clockwork Orange, Get Carter, The Wicker Man, Quadrophenia, Withnail & I, Naked, Trainspotting... In the 1990s an industry has grown up around certain British cult movies &#8211; soundtracks, videos, internet sites and fully-fledged cinema reissues. The makers of these films have become icons of cool, revered throughout the worlds of film, music and fashion. But what makes these films into lifestyles? Your Face Here will tell you why and how. Ali Catterall and Simon Wells have talked to writers, filmmakers and eyewitnesses, and scouted dozens of location sites to create the definitive history of and guide to over thirty years of British cult movies

I would be more than grateful if you could provide a link to it on your great site. . The cover link to it is at
http://images-eu.amazon.com/images/P/184115203X.02.LZZZZZZZ.jpg

Be good to hear from you!

Simon Wells/Ali Catterall

I need quantity two 9:1 Baluns. Van Gorten used to make a unit but has discontinued manufacture of same. Check your junk boxes boys and girls. All my transmission lines are 450 ohm and most of my antennas are close to 50 ohms. A 3 El fixed quad at 80 ft for 40 Metres goes up next week. Should work pretty good or what!!! Contact me directly. Please help.

John

Hi to all --

I think the first answer was the best ...

Free space -- as in outer space -- yes with no atmosphere -- perhaps even further but I didn't do the calculations.

If you live along the Gulf coast as I do, it is not unusual to get temperature inversions etc., that will greatly extend the range to hundreds of miles, and SSB VHF/UHF ops depend on the weather to bend those waves through near earth atmosphere layers where air density keeps them straight.

Thing is that this type of propagation is near earth and weather dependent and your antenna typically has an optimum height -- typically if I recall around 35 feet. If it is too high -- may miss the entry point to the air pocket.

Although I haven't been active much this sun spot cycle (or at all for that matter unitl a week ago) -- I'd be curious how often a useful MUF hit two meters this cycle. This is much more rare but can result in contacts at distances approaching 40 meter skip conditions.

Although I haven't done it in a long time, as DXing on repeaters is frowned upon with the busier repeaters but I remember the first repeater that went up in Falls Church, VA many years ago and we would be amazed at occassional weather related band openings with it not unusual to go 500 each way -- with 200 - 300 miles more frequent. 10 watt rigs were high end back then.

Around 1976 from my suburban VA/Wash DC hilltop location (only about 300 ft. slope but clear to the north. I worked a New York city station on 2 watts SSB PEP using a makeshift ground plane about 15 feet off the ground. Forget the name of that rig -- anyone remember those 2 watt SSB 2 Meter rigs ?? Really liked it.

But back to reality -- I think local communications we are talking about -- not DX. Simplex 5 Watt HT from my 50 ft above sea level Houston suburban location one story house (that's a mountain top where I live) -- 5 miles max normal conditions -- too many trees buildings and obstacles, but put a J Pole or 5/8ths up 15 feet and 20 miles local not unusual with perhaps 50 miles into average repeaters, more on the really high ones.

After a long absence from ham radio I am amazed by the linking we now have of repeaters. I may know a little about propagation just from experience and reading, but when I first got back on VHF and 440 for the first time ever, I hear a station in Amarillo (600+ miles from here) talking to a guy in Galveston, with another in Corpus Christi. I thought it was a band opening but didn't hear the usual characteristic fades etc. I guess the repeaters are linked -- I wasn't hitting the repeater well enough in my living room to get a full explanation but someone help me out here. Is there a Web site that explains this linking. I'm just getting to the PL tones -- I didn't really need to worry about those much 15 years ago.

I feel like a new ham again -- actually more fun than I expected -- but I have a lot of new learning to do. This is what happens when you become inactive (in my case 16 years). Recent events and discussions of Ham Radio got me interested again and I started to wonder why I've been taking my motor home out for the last few years without a radio -- Cell Phones aren't a bit of fun :)

Sorry for rambling -- and take what I say about propogation with a grain of salt -- it has been so long I can't remember how many of what I worked since becoming a Ham 42 years ago -- I'm AM a young man however -- I got my license when I was a baby (well okay 13 years old).

All the best to all those who like to turn knobs and that military radio look -- $189 for a ICOM T7H -- $25 for a 3 Amp power supply this morning at Fry's, DC cable and AA pack on backorder for eternity. To make matters worse I want an HF rig -- got on the net -- $3600 for an HF rig -- what has happened. That little Yaesu 5 watter (also backordered forever -- so I didn't open the wallet yet) at $650 looks much better especially for my love of CW. Like the idea of the NiMH batteries -- about time -- been using them in my digital camera for a year now and they are cheap.

BTW, what's a good mag mount dual band (2M/440) I can stick on top of my RV when I get it out on the lake, etc??? How deep do I have to open my wallet for that. Thank God I'm not retired yet -- need to get this spending done while I still have a dollar to spend. Motor home is fiberglass and aluminum chassis but I know I can find something to stick it on -- now if I just remeber to take it off when I leave ...

Hi,

Does anyone have a schematic for a Yaesu FT-227R 2-meter radio?
I recently acquired a non-working radio and want to try and fix it.

Thank you,
David Barney

Nobody mentioned the 1996 movie "Phenomenon" with John Travolta. In it, co-star Forest Whitaker plays a ham who transmits out of band to a military installation after the Travolta character decrypts some super-secret code in his head. Of course, the feds show up the next day and arrest them both. The synopsis for the movie is at:

http://movies.yahoo.com/shop?d=hv&id=1800261897&cf=ca_info

Nope,  the LCD display has it's own driver and is a plug and go install
except for the 781 where you have to lift a circuit board.

How about 'Contact', starring Jodi Foster? IIRC her dad is a ham, and she winds up working as a radio astronomer.

It may not count as ham radio, but in Anaconda, the guy tries to call for help on a CB radio right before he gets eaten by the giant snake. Too bad he wasn't a ham!

I've heard there's a late '30s/early '40s movie titled something like "Here is Your Hobby: Ham Radio" or "This is Your Hobby: Ham Radio" or somesuch. Supposedly it's been on TCM. There's also an Andy Rooney movie where he's a ham (the second Boy's Town movie?), and one of the Nancy Drew movies has Nancy's boy friend hamming it up with a full rack (of radio equipment...) Not to mention that Bonita Granville was a cutie...

Let me guess, it has an annoyingly cheerful announcer, and gives about
as much useful detail as 'Contact.'

...and it's probably still higher quality than most of the crap on TV
today.

I am looking to buy an slightly older base radio that has 160m (or 80m) to 10m,
6m, 2m (uhf would be nice but not neccassary). Kenwood, Icom, Yaesu or Alinco.
OR, if you know of some used radio web pages I can look for one.

Thanks,
Kirk Mohror
KA7YJB

AMATEUR RADIO NEWSLINE(tm) REPORT #1264 – NOV. 2, 2001

===

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast (for free). We think you will find the time you spend listening to be a rewarding experience.

de
The Amateur Radio Newsline(tm) Production Team

==

Amateur Radio Newsline report number 1264 with a release date of Friday, November 2nd, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hand held radios to Antarctica, Georgia to host the 2002 United States Amateur Radio Direction Finding championship games and the F-C-C takes action on illegal C-B radios.   These stories are first on Amateur Radio Newsline report number 1264 coming your way right now.

(Billboard Cart Here)

HAM RADIO TECHNOLOGY: IRLP REACHES ANTARCTICA

Imagine picking up your H-T, calling your friend and asking him how the weather is. He responds with a crisp clear signal and tells you that its 70 below Zero and snowing. Outside your window the thermometer says its 80 and you plan a day at the beach. Welcome to the world of Internet Repeater Linking as the system expands its global coverage to Antarctica. Nate Dueher, WYZ0X, has more from Denver Colorado:

--

The Internet Radio Linking Project has come to Antartica. On October 23rd, Chuck N0NHJ, set up the first Internet radio link on the continent. A few days later we caught Chuck and a few other hams on the air to ask him a few questions. Let's listen in...

Terry, N0PQV in Denver, Colorado was the first to say hello:

--

[recording]

--

I got a chance to ask a question of Chuck that I wanted to know. Chuck, how many hams are on the station and how many are active on IRLP?

--
[recording]
--

And yet another question from Ian, M0CJY in Rottherham, Yorkshire, England...

--
[recording]
--

One of the other questions we had was Justin KC0LBH who wanted to know all about that famous Anartic daylight:

--
[recording]
--

That's all we have time for today. If you'd like more information on the IRLP project on the World Wide Web, go to www.irlp.net. This is Nate Duehr, WY0X reporting.

--

Once again, if you are interested in tying your repeater to the Internet Repeater Linking Project go to www.irlp.net on the world wide web. (NY0X, ARNewsline(tm)) {This complete very ecxciting QSO is available in RealAudio at www.arnewsline.org on the FTP transfer page}

**

RADIOSPORTS: ATLANTA TO HOST NEXT US ARDF CHAMPIONSHIP GAMES

The South-East will host the next United States 2002 Amateur Radio Direction Finding competition. Newsline's Joe Moell, K0OV, tells us where and when the event will be held.

--

The Georgia Orienteering Club has been selected to host the second USA Radio-Orienteering Championships, to take place April 19-21, 2002. The competition will get under way near Atlanta on Friday afternoon with a practice event, followed on Saturday by the main two-meter hunt and on Sunday by the 80-meter hunt.

In addition to the hunts, there will be a cookout on Friday evening, a dinner on Saturday night, and an award ceremony following the 80 meter hunt, all included in the registration fee. Lodging options include cabins in the park and campgrounds with RV hookups. There are also many local motels and bed-and-breakfast inns.

Standard international rules will be used for these foxhunts, which are all on foot in beautiful woods near Callaway Gardens. The Championships are open to anyone, beginner or expert.

Slovakia will host the next World Championships of foxhunting in fall 2002. Positions on USA's team that will travel to these championships will be determined by individual performances in the Atlanta event, as well as in last summer's USA Championships in Albuquerque.

It's not too early to start making plans to attend the second Radio-Orienteering Championships near Atlanta. For more details and registration information, see the official Championships Web site. The exact URL is rather long, but you can get there in just a couple of clicks by going to my foxhunting Web site: www.homingin.com. That's "homingin" -- as one word -- homingin.com. Or you can write to me at my callbook address.

From sunny southern California, where foxhunters are already practicing for the championships, this is Joe Moell K0OV, for the Amateur Radio Newsline.

--

Again, the web address for more information is www.homingin.com.
(ARNewsline(tm), K0OV)

**

ENFORCEMENT: FCC VS ILLEGAL CB SETS

The FCC has gone after some illegal gear seemingly designed for operation on the Class D 11 meter Citizens Band. This, as it issues a citation to an alleged supplier of the equipment in Oregon. Amateur Radio Newsline’s Norm Steely, KI7UP has the details.

--

In its September 17th letter to Truck-n-Travel and copied to its owner, Eugene Trucking Haven, FCC Portland Oregon Resident Agent Ben Nugen leaves no doubt as to what is going to happen. Either stop selling non-FCC Certified radio gear or the consequences.

His letter states that last July 23 that agents from the FCC observed uncertified Citizens Band radios displayed and offered for sale inside the Truck-n-Travel located on East Pearl Street in the city of Coberg. The FCC says the radios included four models from Galaxy and one from a company called Delta Force. The Commission says its records show that one of these CB sets have been granted an FCC equipment authorization. It warns Truck-n-Travel that the marketing of these CB radios, or even just advertising them is a violation of Sections 2.803 and 15.101 of the Commission’s rules. It tells Truck-n-Travel that it can fine them up to $10,000 per violation per day and that can go on to a maximum of $82,500.

The letter then gives Truck-n-Travel the same warning that numerous ham radio violators have received over the past several years. It tells the company that, in accordance with Section 503(b)(5) of the Communications Act, it has 14 days from the date it received the citation to submit any statement it has to make concerning the alleged violation. And the FCC adds that the Commission staff will use all relevant material information it has -- including information disclosed in the Truck-n-Travel reply to determine what, if any, enforcement action is required to assure current and future rules compliance.

--

More on this case as information is made available. (FCC)

**

ENFORCEMENT: NY REPEATER UNDER SCRUTINY

The FCC has told a repeater owner to explain the operation of his machine. A repeater that FCC Special Counsel Riley Hollingsworth says is on the air all by itself:

--

Hollingsworth: “We opened an audit of a repeater opewrating in Elmhurst New York, KB2PRV, after our evidence showed no identification, no appart control operator, and no apparent coordination.”
--

Hollingsworth says that the letter of inquiry went to Ramon D. Florimon who holds the KB2PRV callsign. He was given 30 days from reciept of the October 2nd letter to respond to the FCC. (FCC)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Southern California Amateur Teleprinter Society net serving West Covina California.

(5 sec pause here)

**

RADIO REGULATIONS: FCC CLARIFIES FUTURE OF CORES

The FCC's Wireless Telecommunications Bureau has clarified several issues regarding Amateur Service implementation of the Commission Registration System--or CORES. The ARRL Letter says that starting December 3, everyone doing business with the FCC--including amateur licensees--must obtain and use a 10-digit FCC Registration Number when filing.

Amateur licensees now registered in the Universal Licensing System or U-L-S already have been cross-registered in CORES and issued a FCC Registration Number by mail. The FCC said it planned another cross-registration by November 28th. Amateurs can check to see if they have an FCC Registration Number via a U-L-S license search. Many Internet call sign servers, including ARRL's, also can provide this information. (ARRL)

**

RESCUE RADIO: JUNGLE RESCUE ASSIST

Ham radio played a role in reuniting with his family a man who had been hiding in the jungles of Guatemala for over three decades. The C-Q Magazine website reports that 72-year-old Salomon Vides of El Salvador emerged from the Guatemalan jungle recently after hiding there for 32 years from a war that lasted about 100 hours.

In 1969, El Salvador invaded Honduras and Vides, a migrant worker, ran into the jungle to escape retaliatory raids. The Organization of American States quickly brought the war to an end, but Vides says he never got the word. He was discovered in August by Rene Sonabo, a taxi driver and Guatemalan ham radio operator, and Sonabo’s son. After persuading Vides that no one was trying to kill him, Sonabo used his amateur station to relay the news to Vides’s stunned family in El Salvador. He has since been reunited with his brother, but the family had not been able to locate his wife and three children. (CQ)

**

THE LAW: THE COST OF ATTACHING TO POLES

The United States Supreme Court is examining a complex Internet case that could eventually affect the availability of online services and what most people pay for them. The court is expected to rule by next summer on a fight over the cost of establishing and maintaining some Internet and wireless networks.

Specifically, the fight concerns the rent that cable television companies must pay utilities to attach wires for high-speed Internet service to the utilities' poles, and whether the Federal Communications Commission can control the rate. The justices also will consider whether cellular telephone companies are entitled to pay government-limited rates for attaching their equipment to utility poles.

A federal appeals panel ruled last year that the FCC does not have the authority to regulate pole rental rates for Internet service. The FCC claims Congress intended it to have that power. The Supreme Court will decide. (Published News Reports)

**

REPEATER OWNERS ATTENTION: RADIO TOWERS FOR SALE

Are you a repeater owner or a club that operates a repeater? Have you ever dreamed of owning your own mountain-top or high rise repeater site? Well if you have, listen up.

In an e-mail to Amateur Radio Newsline, Tom Swierczewski, the Zoning Representative for American Tower Corporation says that the company has several hundred communications towers for sale throughout the United States. According to Swierczewski, sites vary in height from 100 to 400 feet tall and many include large buildings.

If you or anyone you know is interested in this or if you want to receive additional information on specific tower sites, please contact Swierczewski at American Tower Corporation. The information you need to do this is in the printed edition of this weeks Amateur Radio Newsline report. More information is in cyberspace at www.americantower.com.

(Contact information: 1101 Perimeter Drive, Suite 225, Schaumburg, Illinois 60173. His phone number is 847-240-1508 X 663 - Central US time. E-mail is thomas.swierczewski@americantower.com.) (Tom Swierczewski)

**

HAM RADIO BUSINESS: VK MAGAZINE BITES THE DUST

Another failure in the international ham radio marketplace. This, with the announcement that Australia's longest-running electronics magazine has ceased publication.

Victoria’s A-P-C News reports the current issue of Electronics Australia Today will be the last and it’s a decision saddens many V-K amateurs. This is because many generations grew up building equipment from circuits published in the magazine.

Electronics Australia Today traces its history back to Wireless Weekly, which started in 1922. Radio and Hobbies was formed out of Wireless Weekly in 1939. This was renamed Radio Television and Hobbies in the 1950s and Electronics Australia in 1965. (APC News)

**

HAMVENTION 2002 UPDATE: HAMVENTION TO HONOR THOSE WHO PERISHED ON SEPTEMBER 11, 2001

The Dayton Amateur Radio Association will honor the memory of those killed in the September 11th terrorist attacks and the hams who then volunteered their services to the nation by dedicating the 2002 Hamvention to the theme of Emergency Preparedness. In a letter to potential vendors, the Hamvention Planning Committee said that it was very concerned over the terror attacks and believes that emphasizing the emergency communications aspect of ham radio was a very apropos way to honor those lost in the tragedy.

The letter also contained another rather surprising announcement. The Hamvention planners say that they will limit the number of non-ham radio booths normally purchased by those in the computer industry. In fact, the letter makes it clear that the only computer related vendors permitted to the inside display area will be those whose products directly relate to Amateur Radio.

This will be the 51st annual Hamvention. The venue remains the HARA Arena just North-West of downtown Dayton. The dates are May 17th, 18th and 19th, 2002. More information is on the web at www.hamvention.org (DARA)

**

RADIO MILESTONE: NRCDXAS AT #200

The National Radio Club's D-X Audio Service will have its 200th issue available this month. Founder and producer Fred Vobbe, W8HDU says he does not think that is a bad record for what he describes as a little audio based magazine talking about broadcast radio that was started in April 1985. We say, congratulations to Fred and to the National Radio Club's D-X Audio Service on this milestone. (W8HDU)

**

BREAK 2

From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website - www.arnewsline.org.

(5 sec pause here)

**

OUR HERITAGE: HELP RESTORE THE LST-325 RADIO ROOM

Bob Wilder, AF2HD, is part of the team that's restoring the LST-325 Radio Room and he needs your help. Bob says that most of the radio equipment needed for the restoration of the radio room has been found. Also, they have received a donation from a trucking company in the east who is going to pack and ship the stuff on that side of the country and transport it to Mobile Alabama where the work is taking place.

Unfortunately, some of the gear is on the West Coast. It took $190,000 to perform all the work needed to repair the ships hull, front door and ramp, as well as to sandblast and paint the ship. As a result, cash is short.

Bob says that what's needed now is to receive a donation by some west coast trucker or person who can help getting the equipment out there packed and shipped eastward. At least as far as Dallas where the East coasts trucker can move it to Mobile.

Wilder says that Fred Chapman, W4CHT is coordinating the move. If you can help -- or at least direct the group to a trucking company willing to make such a donation, please contact W4CHT by e-mail to nnn0ppe@infi.net . Bob Wilder can be e-mailed at bwild@earthlink.net (AF2HD)

**

HAM RADIO IN SPACE: HAM RADIO BALLOON LAUNCH DECEMBER 1ST

Arizona Near Space Research says that it will launch a ham radio carrying balloon on December 1st, weather permitting. The group had hoped to launch from a local hamfest but the urban location of the event is in enhanced Class B airspace which is currently off limits. Instead, a monitoring station will be at the hamfest event. Full information on the flight can be found on the Superstition Amateur Radio Club website. It's in cyberspace at www.qsl.net/wb7tjd. (Superstition Amateur Radio Club)

**

HAM RADIO IN SPACE: LOTS OF HAMS TALKING TO THE ISS

And while on the subject of Amateur Radio in space, hams world-wide are excited about being able to talk to the International Space Station fairly often these days. This is because Commander Frank Culbertson tries to get on the air for general Q-S-O’s whenever he can. And he recently had one with Berto Willems, ON1CAU, who had his tape recorder rolling. Take a listen.

--

Audio Only - No Text Available (Download Newscast Real Audio File at www.arnewsline.org)

--

ON1CAU says that contact took place at about 15:25 UTC during the recent Scouts Jamboree on the Air. And obviously signals were 5 9 full quieting – both ways. (ON1CAU, AMSAT BBS)

**

SPACE EXPLORATION: 2001 A MARS ODYSSEY - A SUCCESS

NASA's 2001 Mars Odyssey spacecraft was safely inserted into orbit around the red planet on October 25 th. This, slighly over two years after the space agency suffered back-to-back failures by Mars missions.

Odyssey arrived nearly directly on its target - 480 miles above Mars' surface. No orbital insertion or areobraking problems were reported by ground controllers. 2001 - A Mars Odyssey is the space probe that hams had been invited to track when it was launched earlier this year. (NASA)

**

INTERNATIONAL: NZART STRAIGHT KEY NIGHT

The first ever Straight Key Night in Kiwi-Land is slated to be held on the evening of Sunday November 4th. Operation will be limited to 80 Meters from 8pm until 11pm local New Zealand time.

The event is sponsored by the New Zealand's Amateur Radio Transmitters which says to lubricate that old Morse key and enjoy an evening of old time radio fun. NZART it will be an activity night in which everyone can be a winner with a certificate to prove it. For more information visit www.nzart.org.nz on the world wide web. (NZART)

**

DX

In D-X, Gary Halstead, K8KFJ in West Virginia reports a top notch trans-Atlantic QSO on 6 meters. On October 23rd at about 13:50 U-T-C Gary contacted CN8LI in gridsquare IM64. The Q-S-O took place on 50.130 MHz with K8KFJ running 100 watts to a M2 loop at only 20 feet. Gary lives in grid EM98 in the Charleston West Va. area. (VHF Reflector)

Also, Reid Hill, KC5YKX of Corpus Christi Texas says by way of the VHF Reflector that he will be doing VHF - UHF Century Club QSL card checking at the South Texas Amateur Radio Club annual Hamfest on November 10th. Reid also says that Mark Mireles, AD5CA will be doing the Worked All States checking at the same event. The Hamfest will be held at Swanter Park in Corpus Christi. Festivities start at 8:00 AM and go to at least after lunch. Contact Reid by e-mail to kc5ykx@swbell.ne if you need card checking but can not attend this event. (VHF Reflector)

**

THAT FINAL ITEM: NEW LOOK TO THE G4NJH PAGES

And finally, a regular voice heard here on the Amateur Radio Newsline is that of Jeramy Boot, G4NJH, in Nottingham England. And over the past several years Jeramy has become known the world over as the Internet voice of the Radio Society of Great Britain's' weekly GB2RS newscast. But you may not know that Jeramy is also a webmaster in his own right. In fact he hosts a very popular U-K cyberspace address. We invited him to tell you a bit about its past and where it is today:

--
Audio Only - No Text Available (Download Newscast Real Audio File at www.arnewsline.org)
--

Obviously the next question is where to find the G4NJH web pages. They are actually located at www.innotts.co.uk/~asperges. But don't worry if you did not have the time to copy it. Just go to the links page at www.arnewsline.org and click on G4NJH. (G4NJH)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that Amateur Radio Newsline scripts are now available weekly on a self maintained list at Yahoogroups. To have a free text edition of this newscast delivered each week by e-mail go to www.yahoogroups.com, follow the directions and sign up for the ARNewsline list.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm ___________ saying God Bless America, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2001. All rights reserved.

The explorers in Jurassic Park 2: The Lost World use Icom equipment throughout. Their RV is loaded with gear including an Icom HF rig, which Jeff Goldblum uses to beg someone to come rescue them. Then at the end of the movie, they make their way to an abandoned outpost and lucky for them there is another Icom HF rig, covered with grass and mud, but still working!! Vince Vaughn uses it to call CQ-D and asks for rescue helicopters to come pick up the remaining survivors.

Why not use a broadband ferrite transformer? A balun transformer will work on the radio end of the transmission line EXACTLY like it works on the antenna end of the feedline. Modern ferrite transformers require no tuning anywhere in the HF band. No "tuner" is needed.

As with broadband audio amps, solid state amplifiers could really care less about what impedance you hook up to them. Think about speakers for a minute. If the speaker impedance is high, you don't get much power but the amp hardly gets warm with so little current flowing through it. If the speaker impedance is low, output amp current increases, eventually reaching a point where the heat generated by the analog amps melts the junctions unable to shed the heat. So, any impedance between 2 ohms and infinity is just fine. It's a current amp. RF amps in HF transmitters are also broadband, untuned amps. They are designed to provide maximum SAFE power at 50 ohms. They'll also work into 25 ohms but the current doubles and may overheat the bricks. Into 100 ohms, they don't put out near as much power.

The problem both RF and audio amps also have is REACTIVE loads reflecting power. Audio loads don't have much reactive component unless you unplug the speaker from the crossover network or do other stupid things. RF amps have to suffer through all kinds of reactive loads, both inductive and capacitive, all the time. The "bricks" have protective circuits to limit their exposure by reducing the gain of the drivers to a safer level. So, under reactive loads, these circuits simply turn the power WAY DOWN, rather than overheating the brick. This makes providing a resistive load in the range of 50 ohms, the design parameters of the brick, more important.

Untuned solid state amps are not so critical as the reactive impedance matching networks used to match several K ohms of high voltage plate impedance to the low impedance antenna loads we used to use. Any change of load impedance to these tuned impedance matching networks, such as the Pi network, made drastic changes in load on the amps. They were, unlike the brick's untuned amp, VERY sensitive to changes in frequency, requiring constant retuning if you changed channels.

By the way, the impedance of a 1/4 wavelength vertical radiator over a good ground plane is about 18 ohms. Plug a brick amp output into it and the protective circuit cuts back the output to save the amp. You still get plenty of usable power. The "tuner" in your marine radio adds opposing reactance to balance out the capacitive and inductive components because the backstay ISN'T a 1/4 wave long on any frequency but one.

Computers and amateur radios are great together. A prime example is the Kachina 505 but it is very expensive for VE3's. (About $5K) Pegasus makes one but cannot match the Kachina in performance. The other manufacturers must either have a computer driven model or have one on the drawing board. Anybody got any info on an alernative to Kachina?

John

Un poco fascistoides si que son esta gente..... del proyecto radio

Me apunto a la lista, recibo un mensaje sin texto con un fichero adjunto,
les contesto diciendo que Ojo con los virus, que si mandan mensajes con
ficheros adjuntos a listas de correo, avisen de que se trata...... y me
expulsan de la lista por haberme quejado.
Que os parece ?

Saludos
Ramon EA3AAW

The XP1AB DXpedition to Sondrestrom, Greenland is close to take place. This E-mail contain the latest news regarding the DXpedition.

1) The XP1AB eill be used ONE time only and only during the DXpedition. On 1 November 2001 the license will be withdrawn. We are QRV during the CQWW Contest on all 6 contest bands and on Monday 29 October on CW and RTTY. The XP prefix will NOT be gived free again ever!!!

2) We expect to go on air with own call signs/OX from Thursday 25 October (late afternoon or early evening) and we will stay on air until the CQWW starts.

3) We will try to be QRV on 160 M CW from Thursday everning (25 October) and/or Friday evening BEFORE the CQWW contest. Unfortunately, it will NOT be possible to work 160 M AFTER the contest.

4) We do have a YL operator with us. Her call is OZ5ABD and her name is Isa. For amateurs that collect YL's it will be possible work Greenland with a YL operator in the other end. Isa expects also to work CW before/after the contest.

5) The expedition expects to stop on Monday 29 October at approx. 21 GMT. Thueday 30 October will be used to pack all equipment back in the boxes etc.

73 de OZ0J, J�rgen
oz0j@roemming.dk

Now you have the chance to work XP1AB.

XP1AB will be used during the CQWW SSB 2001 contest.

See details at http://www.qsl.net/xp1ab

Quitters never win - Winners never quit !!!
THERE CAN BE ONLY ONE !!!

how about the movie "frequency" i belive it si about a boy how tries to
contact his father(who is dead) using HF radio. It is a fairly new movie.

In the undisclosed town where I ran a Kenwood dealership, the local MSS was it's own worst enemy. Their attitude was better than a large advertising budget on our part. Even new Moto radios bought from them had a $75 programming fee tagged on for EVERY one. They didn't even like to talk to hams about radios, unless you knew the owner who was a ham and were in his "clique".

We programmed all our radio sales for free, and made reasonable changes for free during the life of the radio. For a competitor's sold radios we would charge a few bucks at most, and for a large quantity we did it for the current bench rate. For Ham's that were not pests it was usually free, provided we had time. They might have to wait because customers took priority. However, there were a few hams that wanted reprogramming every couple of days, and didn't care if you were busy- they paid the same rates as the customers. They really should have bought ham radios that were self programmable...

Check out the new radio forums at http://thetube.hn.org they are a bit empty at the moment but hopefully will be well populated soon. Good features such as subscribing to threads etc.

Here's one for you. Its titled "High Frequency" its an Italian movie from late 80's or early 90's. Its about a young boy who uses his late fathers radio to contact a satellite monitoring station in Switzerland. Together they solve a murder mystery. Its not great but its worth watching. They use Yaesu equipment. 73"s Al

Need RadioShack HTA-20 2-meter amp schematics or service manual with schematics. Bought one when they went on closeout a couple of years ago but just stuck it up in the closet without testing it out. Gave it to my son a couple of weeks ago and discovered that I bought one off the shelf that was broken! Opened it up and it looks like it was soldered by a blind monkey having DT's while on a bad acid trip!

TNX - Michael - KD5BBC

Classic Stars Radio Newsletter
Volume 2 Number 01
November 2001
HTTP://WWW.CLASSICSTARS.NET
Stream URL : Http://www.classicstars.net/live.ram
Channel W 01 on iM_Networks (formerly Sonicbox, Inc.)
DJ Twain E-Mail : twain@classicstars.net

Directory :

1. November Schedule Changes : A Quick Overview
2. New Nite
3. CSRO Presents
4. CSRO Holiday Season

CSRO Station Note : We've Undergone Many Changes.....Both Website and Stream.....Much of what we are now doing is still in the testing stages. If the stream doesn't load, give it a chance a little later. We hope you find it will be worth the wait!

---

1. November Schedule Changes
Effective 11/01/2001
A Quick Over-View

The reason that these changes are necessary is due to our upcoming Christmas schedule. We need to adjust things a little bit so we can give you some wonderful entertainment during the month of December! We hope this won't cause to much of a problem for you, and your ability to listen to your favorite radio shows.

On Sunday....

Instead of 5 and a half hours of Magic Island, we'll have :

1:30am The Haunting Hour

2:00am - 7:00am CBSRMT
A Trip Through It's Years

On Monday....

7:00pm The Aldrich Family moves here from 8:00pm

8:00pm Mary Noble, Backstage Wife begins it's(Mon-Sat) airings until November 29th.
That date brings The Cinnamon Bear.

8:15pm Chandu, The Magician begins it's new (6 times per week) time slot.

On Tuesday....

8:00pm Mary Noble
Backstage Wife

8:15pm Chandu,
The Magician

On Wednesday....

8:00pm Mary Noble
Backstage Wife

8:15pm Chandu,
The Magician

On Thursday....

8:00pm Mary Noble, Backstage Wife

8:15pm Chandu, The Magician

On Friday....

7:30pm Gunsmoke Moves from 8:30pm

8:00pm Mary Noble, Backstage Wife

8:15pm Chandu, The Magician

8:30pm Damon Runyon Theater moves from 8:00pm

9:00pm Fibber McGee & Molly moves from Thursdays at 8:00pm

9:30pm Maisie moves from 7:30pm

On Saturday....

9:00am The Magic Island, 5 Chapters, a New Time Slot

11:00am Our Miss Brooks moves from Tuesday Nights

11:30am Richard Diamond moves from Wednesday Nights

8:00pm Mary Noble, Backstage Wife

8:15pm Chandu, The Magician

9:00pm The Whistler moves from 8:00pm

---

2. New Nite

Welcome To Another New Experience from CSRO!

What is New Nite? Well, simply, it's show's you've never heard on CSRO before!
More than likely, it's show's that you've never heard anywhere before! Of course,
there are exceptions to that, but hey, there are exceptions to everything!
New Nite, on the most part and for most people will be a place for ya'll

to hear
shows' ya never knew existed before! For instance, for New Nite #1, here is the line-up we've got scheduled :

New Nite Audition Broadcast : November 21st, 2001

7:00pm CBS Radio Adventure Theater
8:00pm The Creaking Door
8:30pm GI Journal
9:00pm Let's Pretend
9:30pm Ozzie and Harriet
10:00pm Paul Temple
10:30pm Rocky Fortune
11:00pm Story Lady
11:30pm The Unexpected
12:00am The Green Hornet
12:30am The Green Hornet

Note : Yeah, I know, we play The Green Hornet every Saturday morning, but most don't know that! So we'll play two episodes from the series at midnight EST!

New Nite, a place, a time, an experience. An experience of Olde Tyme Radio
that only Classic Stars Radio can bring you!

CSRO Listeners Note :

After New Nite Airs, a CSRO Vote will be put up on our web-site. This vote will give you the chance to vote on the series' you heard on New Nite and tell us which you would like to hear on our regular schedule!

3.CSRO Presents

CSRO Presents
Jack Benny, The Early Years
Saturdays at 2:30pm EST

Jack Benny in "The Bee"

If you are a fan of OTR, or of Jack Benny, it's more than likely you've heard of the feud between Jack Benny and Fred Allen. What you may not know is how or when it started. It is this famous feud and how it started which will be the focus for CSRO Presents during the next 9 weeks.

This entire feud, which ends with the "King for A Day" skit on The Fred Allen Show several years later, began on January 3rd, 1937. This episode of TJBP saw Jack attempting to play a violin piece called "The Bee." Needless to say, at least for those of you familiar with Benny, what should sound like The Bee comes out sounding like a cat in distress. The result, Fred Allen latching on the following Wednesday, poking fun at the misery Benny inspires and advises everyone to leave the country and escape the misery of Jacks violin. The following Sunday we find Benny retorting with his extraordinary wit, thus giving birth to the feud.

The weeks following find the insults dished out by Fred destroying Benny's self-confidence. This is seen in how he delays his final performance of The Bee week after week. Finally, it's to much. Jack is forced to play his violin in an effort to prove he is better than a ten year old who Fred enlisted to help poke fun at Jack.

Here is your chance to hear how it began, at least from Benny's point of view. CSRO will broadcast The Jack Benny Program, dates 1-03-1937 through 02-28-1937 over the next nine weeks. Following the concluding episode of 2/28, we'll bring you the famous King for a Day skit as a closing tribute to radio's greatest feud.

DJ Twain

---

4. CSRO Holiday Season

4a. Greetings everyone! Here is the news of the year!

For those of you who have been with us for a while, you already know what to expect of our Christmas broadcasts. But for those of you who have just joined us this year, then you are in for some great Xmas surprises!

4b. Thanksgiving Broadcast

Since Thanksgiving this year falls on 11/22/1963, an American Historical Date, we will not be doing a Thanksgiving broadcast. Instead, as every year on 11/22, we will be broadcasting our JFK assassination day broadcast from 1:35pm EST until 12:00am EST.

4c. Cinnamon Bear Daily Broadcast

November 29th - December 24th
Every Night at 8:00pm EST, 5:00pm PST

4d. December, Christmas Weekends, Christmas Week

Each Weekend in December, leading up until Christmas,
CSRO will be broadcasting OTR Christmas shows. Tune in from
6:00pm - 12:00am EST, re-played 12:00am - 6:00am EST,
for Olde Tyme Radio, Christmas Tyme!

December 1, 2 Show Details Coming in November
December 8, 9 Show Details Coming in November
December 15, 16 Show Details Coming in November
December 22, 23 Show Details Coming in November

4e. December 24th, December 25th, and December 26th

Tune in for non-stop Olde Tyme Radio Christmas shows. From Lux,
to Fibber McGee, to The Complete Run of The Cinnamon Bear, also
XMAS music thrown in thanks to the big band era. CSRO will be a
great stop on your families Christmas train!

The Cinnamon Bear will be broadcast in it's entirety on Christmas
morning. The series broadcast will begin 12/25/2001 at 9:00am EST. All
26 parts will be played for your Christmas morning enjoyment!

See if you can rent a movie called Testament. I saw it in the theater during the 1980's. It's about life in the US after a nuclear strike and the main character is a little boy that uses a ham radio to talk to people outside his city.

73's,

KJ6AH

I own a Drake R8B and bought a IC-718 to use as my Radio pending my
license soon and that radio blows my R8B in terms of Utilities
listening ie 11.555 etc..
it pulls signals out of the mud the preamp actually inproves signals
without increasing the noise floor as much and the stability is
rocksolid. it has no SYNC-AM for SWL but gets broadcast nicely,
offending station near I just use the 2.4khz AM filter and the shift
and no problem listening to distant dx SWL I I never have to use the
RIT when I tune 11.555 and squelch really works! Im dead perfect no
drift period. The user interface and ease of use is incredible, much
more so than the drake R8B. I love this radio :) how do they make it
so small but so nice? and for 550 dollars I get a General coverage
reciever and a ham transmitter for less than my Drake R8B which sells
for 1300 and is much larger. Why is that???

Here's another:

TCM just last month showed a movie called "Angry Red Planet."
TCM emphasized it's "Red Scare" aspects and it's over the top
fer sure! B-Movie Extraordinaire and lots of Radio action.

Made in the fifties, it stars Peter Graves and dates from the 50's.
Peter is a scientist doing EME (Earth-MARS-Earth) bounces
when he starts getting increasingly detailed messages with a
secret Commie plot !! No kidding. Even my kids got into this one
due to the bizarre lab props Graves had. Peter Graves working
Martian DX. A must watch for fun !

Is it just me, or was anybody else annoyed at the way the prof could make anything in the world, but couldn't make one of those bicycle-generator things he was so fond of power some sort of transmitter?

The receiver they always had, and some other standard boat stuff should have provided all the components he would've needed for a really simple QRP CW rig, and I doubt you'd have to sit on one frequency sending SOS for too terribly long before someone heard and started DFing your signal.

Maybe the island had really restrictive CC&R's... ;)

I went there, he's selling rings to make you "IMMORTAL" so you can live forever.
Last time I checked only "GOD" could do that so I sent an email to the Federal
Trade Commision so they could learn his secrets.

Hi neighbor, can you say "fraudulent advertising claims"? I thought you
could! ;)

The GOES weather satellites have one transponder channel called SAR (Search And Rescue). I don't know the details but it has an uplink of 400 and_something MHz with a down link of 1.5 and-something GHz. If the right digitally modulated signal appears in the channel alarms are supposed to go off somewhere. (I helped build the automated RF test equipment for the GOES prime contractor---Hughes satellite, now part of Boeing. Check our web site at www.aeroflexlintek.com) Perhaps this is what they were talking about, if so it would be available world wide and, as I recall, it is for land, air, and marine use. I know nothing about what the ground equipment is like.

Some satellites carry receivers for the older 121.5 MHz (civilian) and 243.0 MHz (military) aircraft emergency frequencies. I remember reading about one time that the Soviets called up Canada and said there was an aircraft down at such-and-such a location. Sure enough, the Canadians went and looked and there was. Aircraft HTs are available, and I have even seen advertisements for wristwatches with 121.5 MHz beacons in them, but I think you would have to be a pilot to

use one. The FAA would probably get a little grumpy if someone else
tried to use one.

Hmmm, interesting.

Don't know of anyway for it to be completely passive. You would have
to have some active components to do the modulation, but if the
transmit signal is strong enough it could power the whole thing. The
simplest thing I can think of is to put a diode in the middle of a
dipole, which would then radiate harmonics. They would be very weak,
though, or you would have to use a really powerful transmit signal.

As an example, the employee badges we have here at work contain a
little transmitter circuit and loop antenna. When we bring it near

the door there is a signal, I beleive at 100 kHz or so, that powers the transmitter. It sends a signal to the receiver on the door telling it to unlock. This is good for only a few inches distance, however.

I remember reading once about a water company that had a transmitter in their truck. They would drive past your house. A reciever on your water meter would turn on when it received the signal, and send back your meter reading on the second harmonic. The receiver was entirely powered by the RF signal from the truck. Haven't heard anything more about it for a couple of decades now.

Ok Clint; you don't have to charge anyone for any professional service like boat/RV repair, Waiter, Electrical, Plumbing or even to build them a house in the country if you are either independantly wealthy, have a filthy rich parent or are heavily subsidised party elite or movie star (or perhaps your time is over-valued?).

As a Brother Ham, I was wondering if you had a spare mansion in Beverly Hills and a pension for me to retire to? (I noticed Bill C. went to New York instead)

Pardon the belch;

<soapbox>

All that seems to be changing for economic and security reasons, etc. Now they just get rid of the technicians and substitute installers, and ship the radios away to a depot where they perform a wholesale flat-rate repair. This way, security is maintained while employing wetback, kid, prisoner or volunteer for manual or less skilled technical operations like mobile installations and "picking frequencies", or even a god person such as a federal agent or police officer who may have any of the above executed for touching one of "his" radios.

One side-effect of this, is that when a sophisticated system goes down, the search is on for a competent repairman, as many have disappeared since the system was first put on line. Someone may in fact have to be flown out while the clock is ticking. Of course the ultimate answer to all this would be a complete phase-out of privately owned systems completely, and complete takeover by carrier owned systems with leased portable units such as Nextel or a few of the cellular carriers.

This almost does away with the slave labor, because the portable unit doesn't require installation, and can be easily shipped to depot level for programming and repairs.

All this cuts the overhead and "problem" of having to hire someone just to program radios, change fuses and replace antennas (and occasionally to fix a repeater, dispatch console or link) who may need to be shot in the head as a security "concern" by virtue of excessive experience.

</soapbox>

Hi,

I am a ham here for the Microsoft PDC at the LA convention center. I have been trying to reach some repeaters on my VX1R.

I have a list of repeaters but was unable to associate the list to a map. Are there any repeaters that I can work in the downtown LA and convention center vicinity?

Keith, N3HGN

There was a book made into a TV mini-series in the mid-70s:
"The French Atlantic Affair". It was pretty good, with a plot about
some downsized NASA folks hijacking a cruise ship.

Hero was a vacationing Amateur who brought his HF transceiver
along. As I recall, it was a Swan, but the resolution *still* could
have happened!

I don't know if it ever made it to video, but I couldn't find any
reference to it. They may have changed the title at some point.

I feel silly for playing with radios instead of going to medical school. People seem to need livers a lot more than they need radios.

PS when I heard about JFK, I was fiddling around with
a transistor radio.

Go to http://www.imdb.org and enter in the search Amateur radio, there are 138 movies with amateur radio, here are the top 10:-

1. Fairylogue and Radio-Plays, The (1908)
2. "Acme Radio Hour" (1995)
3. Automatic Radio Compass: Part I, The (1955)
4. Automatic Radio Compass: Part II, The (1957)
5. Representative Radio (2001)
6. Radio Rampage (1944)
7. Radio Rhythm (1929)
8. Radio Rhythm (1931)
9. Radio Riot (1930)
10. Radio Riot (1949)

You have a list of repeaters?

You're IN Los Angeles right now?

You have a radio?

TRY THEM!

Sheesh!

I haven't heard of any of these movies, but I am interested enough to find out. However, I think you should of checked out your search a bit more, because I believe that some of them, such as Radio Riot and Radio Rhythm, are actually about amateur broadcasting or pirate radio.

I was in my eighth grade class and we had (gasp) televisions in the classrooms. This in a catholic, parochial school. We watched most of the rest of the day.

Sir,

Since I do not have a prop map, I cannot determine what I can hit with the radio.

Also, if you have nothing good to say, then do not. It is arrogant hams like yourself that contribute to the decline of this hobby. If you have nothing good to type then sit on your hands.

With deepest regret....

How far can I expect a 2meter radio to transcieve at 5, 10, and 50 watts
in typical urban environments?

Sir,
     You don't need a map.  You have a list of repeaters, you have
a radio, you have a location from which to operate.  What more do you
need than to go down your list and TRY the ones you have listed?  Do
you NEED someone to point to a frequency and TELL you that you can hit
the repeater before you actually TRY it?

>Also, if you have nothing good to say, then do not.  It is arrogant
>hams like yourself that contribute to the decline of this hobby.  If
>you have nothing good to type then sit on your hands.

>With deepest regret....

     Bite me.  If I have nothing good to say, I'll say it.  If I
have something good to say, I'll say it too.  You have the power of
free will to either read or not read.  I'm not an arrogant ham.  I'm
an arrogant human being who has the ability to THINK for myself and
the INTELLIGENCE to experiment so that I can find out for myself which
repeaters I can and can not hit.  The fact that you had the time to
boot up a computer and post your question on the newsgroups shows that
you have spare time.  You could have spent the time it took to post
your message by trying several of the repeaters on the list you hold
in your left hand with the radio you hold in your right.  Three words
for the wise...  THINK FOR YOURSELF!

Tough one to answer. Many variables to consider... Antenna efficiency/design, density of buildings (how many in a given area), composition and construction type of buildings (determine absorption and reflection properties), type of terrain involved. Mobile, at 5 watts I can usually hit repeaters within 20 miles with full quieting. At 45, I can barely hit repeaters 60 miles away. At home with antenna higher and with more gain (about 6 dB), that 5 watts gets me into the 60 mile distant repeater good enough to carry on a scratch QSO, and 50 make full quieting into that same repeater. Swing the beam that way (13 dB gain, I believe), and 5 watts is full quieting into the 60 mile repeater. I suggest you experiment, see what results YOU come up with.

I don't see how a 'prop map' would make any difference. Get a list of the repeaters in the area and try them all. That is the only way you will ever have your question answered.

Bob

I have NEW slugs that will work in either the BIRD or COAXIAL DYNAMICS watt
meters-following are for 2-30 MHz (contact me for other wattages and frequency
ranges)

5KW-$150
10KW-$160
25KW-$170

Also have NEW meters made by Coaxial Dynamics which will read both PEP and
"Bird Watt" - at the flick of a switch....These meters have a larger size meter
than the Bird models-Made in USA -2 year warranty

These are EXCELLENT meters - $390

Please Email all serious inquiries

Thank You

I think that what those who are replying don't realize ist hat Keith is
from Pennsylvania.

Los Angeles and surrounding area is a BIG place.
There are 3+ pages of likely repeaters in my 6 year old ARRL repeater
directory just on 2 meters.
That means about 150-200 different repeaters.
It's probably difficult for a "furriner" to know where different of the
LA areas are and which he has a chance of hitting with an HT.
Some of the repeaters could well be on the BACK SIDE of a mountain range
from where he is due to the terrain in the LA basin or 100 miles away
half way to Bakersfield yet still listed under LA.

Were I Keith, I'd try any TWO METER repeater under LA County that says:
(450 tends to be clannish and closed in SO CA with a lot of remote bases)

Los Angeles (2 in my old directory)
Palos Verdes
Catalina Island
Glendale
Long Beach
Redondo Beach

And in the Orange County section:
Huntington Beach
Newport Beach

There is nothing arrogant about suggesting that you try
it and see. That's just common sense.

I've read in history books that hams sometimes did such
things. No, I don't believe a word of it.

Has anyone upgraded the CRT display on their R9000 or 781 to the LCD
unit available from Icom.

If so how sucessful was the mod and how easy was it to do?

Have you found any drawbacks with the LCD compared with the CRT?

have you found any benefits from having the LCD display?

Regards

Steve G8EBM

Keith, this is a formidable task! Downtown L.A. can be a horrid mess
to get out of with 4 or 5 Watts sometimes!

The L.A. Unified School District Repeater system on Mt. Wilson has
some of the finest equipment in the region ... 449.700 negative
offset, tone = 131.8.

Hi Bob,

I have been trying just not hitting any of the repeaters. I was
looking for someone in the LA are who might be familiar with
conditions here. I come from a mountainous area and the conditions
varied widely.

Actually, I have worked on prop maps and it does make a huge
difference. Repeaters are quite often shadowed because of terrain.
What I was looking for was some general help since there is a huge
number of repeaters here.

73's Keith

Sir,

You have a right to speak your peace. So do I - I am an elmer in my
area and and try to be helpful to others even if the question seems to
me simplistic.

I wish people like that one yourself would return to sediment loads of
the communation from which you have emerged.

End of any further communications....

I'll tell you now, it can't be done, at least not very easy.
The best way would be to use the CRT "monitor" output, to run on a flat
screen LCD monitor.

A very good "old" rig.  As these rigs get older, the problems they have can
be any number of things, but over all, the rig is good.

```

I have a ADI AT 600HP 2 meter/440 dual band ht.

This unit is in good condition, only flaw is a small scrape on the LCD, and some minor wear on the keys. 8-9/10

This unit has been expanded (via keypad, not hardware) to TX/RX at least 130-170 and 430-470, also includes 800mhz and 118-??? aircraft AM RX. This unit has 5 watts of power on high output.

Comes with radio, 2 batteries in decent condition, wall charger, and ADI drop-in rapid charger.

$175 OBO plus shipping OR trade towards a Yaesu FT-50R or VX5-R

Please reply via private email if you are interested.

Kenny

My TM-221 manual says this:

1. Press VFO/M key to select VFO mode
2. Press M.IN key (M indicator should show)
   then press REV key.
3. Select tuning step using Tuning knob or
   UP/DOWN switches.
4. To return to normal receive frequency press
   any front panel switch except LOW or POWER

Hope that helps

Alan

I recently installed a mobile APRS station in my truck, however I am have problems with alternator noise on my transmit audio. I have both the radio and the tracking unit attached to the second set of terminals on the battery as well as raping the power cords in a RF-Choke device with out any effect. My next idea is to install a large capacitor between the power leads. Any other ideas how I can resolve this issue? The alternator noise apers to be coming from the tracking unit because no noise is present when I use the hand mike to key the radio. Any ideas.

You can buy them directly from Motorola.com, or try audioimplements.com, or even ebay.

Hello,

I have a Picopacket and am finding it to be very, very noisy when used
on 2 meters. I've looked at it with a spectrum analyzer - it's not good.
Is this typical of picopackets or unusual?

Thanks,
Mike

Hi

I am looking for a VHF handheld transmitter but also
I want to has all the capabilities of an all mode radio scanner

Please suggest me a good and cheap as possible model for a newbie like me

Thanks a lot

Randy Mclean(WO5M) <rmclean@this_is_an_invalid_e-mail.com> wrote:

> I recently installed a mobile APRS station in my truck, however I am have problems with alternator noise on my transmit audio. I have both the radio and the tracking unit attached to the second set of terminals on the battery as well as raping the power cords in a RF-Choke device with out any effect. My next idea is to install a large capacitor between the power leads. Any other ideas how I can resolve this issue? The alternator noise apers to be coming from the tracking unit because no noise is present when I use the hand mike to key the radio. Any ideas.

Don't wire the power supply leads of the tracking unit directly to the battery. Connect them (or at least the ground) to the transceiver.

When there is a shielded wire between tracking unit and transceiver, and the shield has enough copper in it, and at the transceiver end it is connected to a firm ground (not the "neutral" wire of a mike connector), omit the wire between battery - and the tracking unit.

Rob

Hello,

Can someone please tell me how to eliminate the beep when pressing the
buttons on the rig. The beep is way too loud and I want to turn it
off.

Thanks for any help.

I have a ADI AT 600HP 2 meter/440 dual band ht.

This unit is in good condition, only flaw is a small scrape on the LCD, and some minor wear on the keys. 8-9/10

This unit has been expanded (via keypad, not hardware) to TX/RX at least 130-170 and 430-470, also includes 800mhz and 118-??? aircraft AM RX. This unit has 5 watts of power on high output.

Comes with radio, 2 batteries in decent condition, wall charger, and ADI drop-in rapid charger.

$175 OBO plus shipping OR trade towards a Yaesu FT-50R or VX5-R
(Make me an offer)

Payment via PayPal (Preferred) or Money Order

Please reply via private email if you are interested.

Does anyone know where I can get manuals and license information for the
Yaeasu Vertex VX500 4x radios? Our disaster relief team was just given
3 of the these radios. They are in very good condition and we would
like to use them for our strike team leaders.

Thanks,
Hamilton Bryant

ARNewsline(TM) #1257 - Sept. 14, 2001

Amateur Radio Newsline report number 1257 with a release date of Friday, September 14, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Terrorists strike at the United States and ham radio responds. This story is first on Amateur Radio Newsline report number 1257 coming your way right now.

Billboard Cart Here)

**

EMERGENCY COOMMS: HAM RADIO ON ALERT AS TERRORISTS STRIKE THE USA

Amateur radio took to the airwaves to provide assistance in the wake of apparent terrorist attacks in New York City, Washington, DC the morning of September 11th. More than 300 died in the four highjacked airliner crashes. The number of dead and injured on the ground is still being assessed. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, in near the scene and has this report:

--

“The city remains completely shut down. No access to any bridges, tunnels or subways. F-16 Aircraft are flying very noticeably in New York airspace -- patrolling. We are literally under military and federal control and the governor has mobilized the National Guard.”

Those were the words of one New York area ham familiar with emergency communications. He was describing by e-mail the situation late in the morning of Tuesday September 11th after what are believed to be terrorist launched attacks against the New York City and Washington DC.

Almost immediately after the apparently coordinated assaults, President George W. Bush has announced that the US military was put on high alert here in the United States as well as abroad. At about the same time the Department of Transportation issued a nationwide notice closing off all domestic air traffic.

As we go to air, the FCC has not issued an emergency declaration or other special instructions to the Amateur Radio community but the American Radio Relay League has asked amateurs to stay alert to instructions from local authorities. And the ARRL says that hams ARE ready to assist in any way that they can. This is what we know so far, courtesy of the American Radio Relay League and its webpage:

Here in the Metro New York area some A-R-E-S and RACES organizations opened emergency nets in response to the disaster. According to ARRL Section Emergency Coordinator Tom Carrubba, KA2D, an net was set up on the WB2ZSE repeater with Guy Richman, KC2AYG, as its control station. The net handled emergency traffic and provided hams to shadow some New York City officials. Meantime, Kenneth Goetz, N2SQW, reported that a New York State RACES nets were operational on 7.248 MHz and 3.993 MHz. Both nets handled emergency and government-related traffic.

In the Washington area, Maryland and D-C Section Emergency Coordinator Mike Carr, WA1QAA, told the ARRL that RACES groups were activated in Montgomery County and put in standby in Howard County. Montgomery County Deputy Radio Officer John Creel, WB3GXW, reported that county's RACES team was activated and under full tactical alert. Also, Virginia SEC Tom Gregory, N4NW, asked everyone to monitor the emergency frequencies and to keep a full tank of gas. The Old Dominion Emergency and Virginia Emergency nets were said to have been active.

At times like this, one group the nation always turns to is the Salvation Army. That organization reports its Salvation Army Team Emergency Radio Network activated its High Frequency net on 14.265 MHz. SATERN also handled health-and-welfare inquiries sent in via its website.

Meantime, the FCC's Riley Hollingsworth suggested that the amateur community remain calm but to be ready. He also recommended that amateurs monitoring any suspicious communications tape it and contact him. Hollingsworth says that he will relay relevant information to the FCC duty team.

The FBI also has set up a toll free number for those with leads or other information on the terrorist attack. It’s at area code 866-483-5137. Leads can also be sent via a special website at www.ifccfbi.gov.

Reporting from the Metro New York area, I’m Henry Feinberg, K2SSQ, for the Amateur Radio Newsline.

--

One question on the minds of many hams is what will happen to the hobby if our government declares war in retaliation for this terrorist act. The American Radio Relay League advises that should a state of war be declared, Amateur Radio would not automatically be shut down. The League says that this requirement was eliminated prior to the Gulf War. (ARRL, ARNewsline(tm), K2SSQ, WB3GXW, FBI release, others)

**

RADIO LAW: FLORIDA CB'ER SENTENCED

A Citizens Band operator with an apparent dislike of ham radio operators has received probation for ramming the car of a local radio amateur. This after sentence was handed down August 30th on William Flippo of Jupiter Florida. We have this report:

--

Last spring William Flippo, who is known as Rabbit Ears on 11 meters was found guilty on a charge of damaging the vehicle of Ed Petzolt, K1LNC. At the time he was accosted, Petzolt was assisting federal authorities in tracking down malicious interference to ham radio operations that was eventually proven as coming from Flippo.

The judge who pronounced sentence ordered Flippo to rid himself of any two way radio gear that he may now own. Also, the judge told Flippo that he may not own or possess any weapons. And he must reimburse Petzolt for lost wages. Flippo was given thirty days to appeal the judges ruling.

Before being sentenced on the criminal charges, Flippo has already been fined twenty thousand dollars by the federal government. This, after the FCC proved that Flippo was the source of willful and malicious interference to Amateur Radio communications. He was also cited for failure to let the FCC inspect his radio equipment and unlicensed operation. Flippo has declared bankruptcy and so far has not paid that fine. The government is perusing collection.

For the Amateur Radio Newsline, I’m Bill Burnett, KT4SB, in Miami.

--

If all that were not enough, Flippo is now scheduled to appear in federal court November 5th after his arrest last summer on additional federal charges. There, he faces four counts of operating without a license and four counts of deliberate and malicious interference to a Amateur Radio. Flippo was taken into custody in July 2000 and has been free on $100,000 bond ever since. (ARRL)

**

RADIO RULES: FRN BECOMES MANDATORY ON DECEMBER 3

Starting this December 3rd, everyone doing business with the FCC --licensed or not -- must obtain and use a 10-digit FCC Registration Number -- or FRN. The FCC calls the move a first step toward streamlining fee collection and tracking.

Many amateurs who registered with the Universal Licensing System were assigned an FCC Registration Number by the Commission Registration System or in a one-time cross-registration last year. Any of those have already been notified by mail. (ARRL, FCC)

EMERGING TECHNOLOGY: DATA AS RF OVER POWER LINES

Internet access via power lines has been reborn in Europe. This as local electric utility companies in Germany launch what vendors tout as the world's first commercial services for high speed Internet access via the power line. And while it holds a potential as competitor to D-S-L and cable modems it also could cause problems for ham radio. Q-News Graham Kemp, VK4BB, has the worrisome details.

--

Rick P29KFS has filed this 'disturbing' report. Another commercial launch is planned in Sweden later this year, as is a trial for similar services in the Netherlands.

Earlier attempts to offer Internet service through the electrical outlet were frustrated by technical problems. Now, however, the companies behind the commercial rollouts say they have solved problems such as electromagnetic incompatibility, created by transmitters and high-frequency transmission on the power line. Other problems that have been solved include line noise, caused by various devices connected to the power grid, which can disrupt data communication.

Communication on the unshielded power lines does makes them emit radio-frequency signals that can interfere with radio transmissions. Germany is said to be the only country that has regulated emission level.

For the Amateur Radio Newsline, I’m Graham Kemp, VK4BB.

--

What were termed as alarming levels of interference were reported at trials in 1998 in England. According to news reports, some British radio amateurs complained, saying streetlights functioned as enormous antennas. But Nortel and its partner United Utilities in 1999 said that those reports were groundless and that power line communication doesn't conflict with any public users of the radio spectrum. (Q-News)

**

ENFORCEMENT: WATCH WHAT YOU SAY ON THE AIR

In enforcement action dealing with language, the FCC rules enforcer Riley Hollingsworth has written to Shannon L. Ratigan, N0JAM, of Winnetka California. In his August 22nd letter, Hollingsworth says that the FCC was monitoring transmissions allegedly coming from Rattigan's station between 8:00 PM and 9:00 PM Pacific on May 27th. Hollingsworth says that what was heard on 147.435 MHz indicates that Rattigan is seriously misinformed about the Commission's enforcement of the prohibition against obscene or indecent Amateur Radio transmissions.

Hollingsworth tells Rattigan that the Commission's rules prohibit Amateur stations from transmitting obscene or indecent words or language. He continues by saying that utterances of any obscene, indecent or profane language by means of radio communications are prohibited by Title 18, of the United States Code Section 1464. Also, that under the terms of the Communications Act the Commission may revoke any station license for violation of this regulation. Rattigan was given the usual 20 days from the date of Hollingsworth's letter to respond. (FCC)

**

ENFORCEMENT: TAKE THAT REPEATER OFF THE AIR - 1

The FCC has told a Utah ham that he must take his uncoordinated repeater off the air and do it now. Not only is the uncoordinated machine interfering with a coordinated system: it also appears to lack any sort of control. Riley Hollingsworth is the FCC’s Special Counsel for Amateur Radio Enforcement matters:

--
In-Q: We sent a...
Out-Q: ...no control operator.
--

According to Hollingsworth, Decho was directed to cease operation of the repeater upon receipt of his letter. He was also requested to respond within 20 days and state what steps have been taken to eliminate interference to the WA6UZS machine. (FCC)

**

ENFORCEMENT: TAKE THAT REPEATER OFF THE AIR - 2

And the FCC has told the operator of an uncoordinated repeater in New York State to either fix the problem his system has created or to have had the system off the air by September 3rd.

That warning went to Richard Laing, WB2JPQ, of Eden New York who was first contacted by the FCC back on April 18th. At that time the Commission told Laing that his uncoordinated repeater was causing interference to the coordinated VE3ZAP Canadian system. On May 29th, Laing replied and said that he was changing the repeater frequency and location to comply with coordination. He also told the commission that it would take approximately a month to obtain the new crystals and re-tune the duplexer.

The FCC says that it acknowledged this response and also requested that Laing remove the repeater from a link system. On July 17th Laing reportedly advised the FCC that the change would be accomplished in approximately a week. It wasn't and that lead to the new ultimatum from the FCC. (FCC)

FM AND REPEATERS: NEW KARC PRES SAYS TO COME TO THE WEBSITE

Speaking about repeaters, Brian Short, KC0BS, is the new Frequency Coordinator and President of the Kansas Amateur Repeater Council. And he is asking anyone who operates a repeater in Kansas to please keep in touch.

Short is asking Kansas repeater keepers to take a moment to go to the organizations website at www.ksrepeater.com to look at the new platform and list of officers. He adds that while you're there, please click on the repeater listings and review your information. If it is not there, incorrect or incomplete, please send an e-mail to kc0bs@arrl.net with the latest update. (KC0BS)

HAM RADIO BUSINESS: CQ CONTEST MAGAZINE - QRT

If you are a reader of CQ Contest magazine, get ready to say goodbye. This is because the publication which is devoted to the art of amateur radio contesting, will cease publication with its October issue.

CQ Contest made its debut in 1996 and has been published 10 times per year ever since. And while critically acclaimed for its coverage of radiosporting, the magazine has never shown a profit.

As publisher Dick Ross, K2MGA, put it, approximately $750,000 has been invested in CQ Contest since its launch with cumulative losses exceeding $150,000. Ross says that as much as he loves contesting, it no longer makes sense from a business standpoint to continue to subsidize CQ Contest magazine.

As to what will happen to outstanding subscriptions? CQ Contest subscribers will begin receiving the company’s flagship CQ Amateur Radio magazine as of the November issue. Those who already subscribe to CQ will have their subscriptions extended based on the value remaining in their CQ Contest subscriptions. And if CQ Contest Editor Bob Cox, K3EST is able to launch his own web-based contesting publication, fulfillment of these subscriptions will again be transferred to that magazine. (CQ, K2MGA)

**

HAMFESTS AND CONVENTIONS: THE ARRL SOUTHWESTRN DIVISION CONVENTION

If you judge a convention a success based on the way people were smiling, than lots of kudos go to the planners of last weekends ARRL Southwestern Division Convention held in Riverside California. Why was everyone so upbeat? A lot probably has to do with the mindset of those who put the show together. That's the Inland Empire Counsel of Amateur Radio Clubs. Gary Boskovich, KD6QLT, is a spokesman for the group:

--

In-Q: It takes teamwork...
Out-Q: ...and its still ongoing.
--

Among those who attended were ARRL President Jim Haynie, W5JBP, International Affairs Vice President Rod Stafford, W6ROD, retiring Southwestern Division Director Fried Heyn, WA6WZO and his newly elected replacement -- the current Vice Director Art Goddard, W6XD. ARRL Headquarters sent out several of their finest including Field and Educational Services Department Manager Rosalie White, K1STO, and radio interference solver Ed Hare W1RFI.

All in all it was a fun weekend and Boskovich says that the group plans to do it again in 2005. Next years Southwestern Division Convention takes place in San Diego. (ARNewsline(tm))

SPACE AND SCIENCE: ENVIRONMENTAL SATELLITE GOING QRT

NASA is ending a satellite mission that kept tabs on the hole in Earth's ozone layer because the space agency cannot afford to keep paying the $10 million-a-year bill. The Upper Atmosphere Research Satellite will cease scientific operations by September 30 th. This is 10 years after it was deployed by space shuttle Discovery.

The mission was originally designed to last for just three years, though seven of its 10 instruments still work. NASA said the 6 1/2-ton satellite will either be pulled from orbit by the space shuttle or allowed to crash back to Earth sometime between 2016 and 2027. A replacement mission called AURA is scheduled to be launched in 2003. (Space Daily)

**

HAM RADIO IN SPACE: ISS HAM STATION MODULATION

One of the hardware specialists involved with the ham station on board the International Space Station has explained why the audio from the crew sometimes sounds low level. Posting to the AMSAT SAREX remailer, Lou McFadin, W5DID, says that the deviation is intentionally set such that if the speaker has the microphone just touching his lips it is about 2.5kHz.

Mc Faddin goes on to say that the crew uses a special noise canceling headset so it requires the microphone to be very close. He says that there are times when they forget to close talk the mic with the result being the low deviation and low sounding audio level.

But there is another side to this. McFadin says that he has monitored many terrestrial hams on the air and most have their deviation set very high. Some as high as 6 to 7 kHz. He says that would be too much for an orbiting spacecraft where the Doppler is already 2 kHz. McFadin adds that this will be even more critical when the 70 centimeter communications system comes on line. That, says W5DID, will happen later this year. (SAREX Remailer)

**

GUEST SPEAKERS: I-PHONE CLUB TALKS OFFERED OVER THE INTERNET

One of the leading proponents of Internet based repeater linking says that he has now given talks on the subject to a number of radio clubs in the around the world by means of the Internet itself. Ian Abel, G3ZHI, says it is a good way to have a guest speaker at the club, without the speaker having to travel long distances to attend in person. If you would like Ian to give a talk at your club on this subject, please e-mail him at g3zhi@hotmail.com. (G3ZHI)

DX

In D-X, Harry Edwards, W6DXO, reports that thanks to the Zimbabwe Amateur Radio Society he will be operating a QRP on Safari from Zimbabwe's Linkwasha Wilderness Safari Camp, and later from the famous Victoria Falls Hotel. He will use the call sign Z2/ W6DXO. Listen for him from Zimbabwe from September 27 through October 5th. An effort will be made to work as many QRP stations as possible. (E-Mail)

And Indiana's White Water Valley Amateur Radio Club will operate special events station this fall on September 22 nd and 23rd from 9 a-m top 5 p-m Eastern time both days in celebration of the annual McMaze Dazes. According to KB9HM, this years McMaze will be an etching cut into a 10 acre corn field showing a famous sports figure. The ham radio commemorative operation will use the call sign K9D, with operation centered on 7 point 265 MHz – plus or minus QRM. QSL as directed on the air (KB9HM)

**

THAT FINAL ITEM: THE PASSING OF A VHF LEGEND - ED CLEGG, W8LOY - SK

And finally this week, the changing of the guard in ham radio continues with word of the passing on Friday September 7th of the legendary Edward T. Clegg, W8LOY. Clegg died of natural causes at age 80 in Lancaster Ohio.

A New Jersey native, Clegg retired to Ohio in the early 1990's following an impressive career devoted to designing, building and marketing radio equipment primarily for ham radio. Along with such legends as the late Faust Gonsett W6VR in California and Ed Ladd of Whippny Labs in New Jersey, Ed Clegg is credited with bringing the world of VHF to the average radio amateur of the 1950's and 60's at prices any ham could afford. In the early '60's the Clegg Zeuss transmitter and companion Interceptor receiver were the Roles Royce of the 6 and 2 meter A-M community. And Ed Clegg even thought of newcommers and young hams when he brought out the under $200 Clegg 99'er transceiver. It was a 6 meter radio that even a teenager could find the dollars to buy. That included a then very young Bill Pasternak, WA6ITF:

--

The first time I head a Clegg 99’er on the air was with Ed at the mic. He was W2LOY in those days and his signal while not very strong was very easy to copy because of his impressive audio. We got into a QSO on 50.35 Mc or there abouts and he told me about the new transceiver he was designing and I was listening to the prototype. A few months later I was the proud owner of Clegg 99’er serial number 2 or 3. That QSO was also the start of a lifelong friendship with Ed. His passing is a loss for all of Amateur Radio and -- as you can guess -- a very personal one for me.

--

Another friend of Ed Clegg was Ohio resident John Hilliard, W8OF. John tells Amateur Radio Newsline that he visited W8LOY at his home on several occasions and was amazed at the collection of ham radio equipment that Ed Clegg had designed over the years -- including one he put together years ago that never made it to the marketplace:

--

Three or four years ago, the last time that I had a chance to sit down for any length of time with Ed in his basement, he pulled out several different prototype radios that he sort of wanted to keep secret -- it seemed like. One of them was a type of a radio that used several different frequencies to transmit and receive on. Actually what it was -- was an early spread spectrum radio. And I do not think that term was even being used back in the 70’s.

--

Whether or not Ed Clegg invented spread spectrum before the advent of microprocessor control may not ever be known. What is well accepted in our ever changing world of Amateur Radio is that Ed Clegg, W8LOY, was truly a designer and manufacturer well ahead of his time.

Ed Clegg, W8LOY, is survived by his wife Mavis, his daughter Linda and two grandchildren. A memorial service will be held at a later date. (W8OF, ARNewsline(tm))

Amateur Radio Newsline report number 1259 with a release date of Friday, September 28, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Restructuring comes to the United Kingdom and brings with it 5 word per minute Morse Code. This story and much more is next on Amateur Radio Newsline report number 1259 coming your way right now.

(Billboard Cart Here)

**
RESTRUCTURING: NEW HAM RADIO IN THE UK

A totally new licensing structure for ham radio has come to the United Kingdom. This, as the Radio Society of Great Britain and the U-K Radiocommunications Agency make a joint announcement on Friday, September 21st outlining a series of changes to amateur radio licensing. Changes that both say are designed to make amateur radio more attractive as a technical hobby.

The changes include lowering the Morse code speed requirement for full licensees, combining some license categories, allowing trainees to operate while supervised before passing an examination, and the introduction of a new Foundation Class license. Jeramy Boot, G4NJH, has more:

--

In brief, the following are the changes being introduced:

The Morse requirement for the Class A license is being reduced to five words per minute with immediate effect and the Class A/B license is being incorporated into the Class A license. Class A/B license holders will be offered the choice of either retaining their existing M5 callsign or changing to an M0 callsign.

Additionally, to encourage the practical aspect of amateur radio training, unlicensed trainees on a registered training course may be supervised by full license-holders to operate a station and contact other UK licensed amateurs. There will be no time limit on the duration of any message.

With effect from the 1st of October 2001, the Novice Amateur Radio License will be re-named the 'Intermediate Amateur Radio License'. Intermediate (A) licensees will be allowed access to all amateur radio bands.

Intermediate (B) will be allowed access to all amateur bands at 50 MHz and above. All Intermediate licensees will be allowed 50 watts output in all bands except where a lower power limit already applies to Amateur (A) licensees, in which case the lower level shall apply.

The final change to the amateur radio licensing structure prior to the World Radio Conference in 2003 will be the introduction of a new 'Foundation' license at the beginning of 2002. This license will provide access to most of the amateur bands, and restrict licensees to a maximum power of 10 watts RF output. Transmitting equipment will need to be commercially-manufactured items, or properly-designed commercial kits.

Jeramy Boot, G4NJH

--

Obviously that’s a lot to digest from such a brief overview of the now restructured United Kingdom Amateur Radio service. Don’t worry. Jeramy says that further details are on the RSGB Internet site at www.rsgb.org

**

RESTRUCTURING - IRELAND HOLDING FIRM ON 12WPM MORSE REQUIREMENT.

As the U-K moves to its new licensing system, word that Irelands licensing authority is holding the line regarding the continuation of that nations 12 word per minute Morse code exam. A spokesperson for the Irish licensing regulator has informed the national society that the 5 wpm test can only be introduced as part of a new license. Until further notice all candidates for Ireland’s Class A licenses will have to pass the 12 wpm Morse test for the immediate future at least.

**

SILENT KEY: FCC’S STEVE LINN N4CAK KILLED IN ROAD ACCIDENT

Sad news from the FCC. Word that 25 year veteran Steve Linn, N4CAK, and his wife Lesley Nearman were killed on Friday September 21st in an automobile accident. This, as Linn and his family were on their way to an Amateur Radio conference in Virginia Beach. Their two children Andrew age 12 and Denna age 9 survived the accident with minor injuries. They were treated at a nearby hospital and released.

Steve Linn was based in the FCC's facility in Gettysburg, Pennsylvania where he served as the Deputy Chief of the Licensing and Technical Analysis Branch of the Wireless Bureau's Public Safety and Private Wireless Division. He was a frequent FCC representative at hamfests and conventions as well as a regular at the annual meeting of the National Council of Volunteer Examiner Coordinators. The NCVEC’s Scotty Neustadter, W4WW, knew Linn. He says he was very much impressed by Linn’s desire to have the FCC programs he was responsible for be of service to the amateur community, and not a regulatory or administrative burden.

And during the 2000 Dayton Hamvention FCC Forum it was Linn who spoke at length about Universal Licensing System and its effect on the Amateur Radio service. And he did it in a way that the audience could understand and easily relate to:

--

“We have about eleven different services that we handle within the Wireless Telecommunications Bureau. The branch that I am with in Gettysburg handles about eight of those eleven, and we are combining all of those services into a master -- combined -- universal -- wonderful -- perfect -- database.”

“There are a number of benefits to this system. You can get on-line and do application and licensing search that you could not do before. You can do on-line filing. You can check on other people. I think that there are some services that if you get off the FCC site and go to other sites that they tap into the FCC site to do record searches.”

--

An FCC spokesman described Steve Linn was a wonderful person and a dedicated FCC employee. He said that Linn will be sorely missed by this Bureau and the entire Commission, adding: “We are all deeply saddened by this tragedy.”

The ARRL says that services for the Linn and Nearman were held Monday September 24th in Lower Paxton Township, Pennsylvania. In lieu of flowers, memorial contributions should be sent to Temple Ohev Sholem, 2345 North Front Street, Harrisburg, Pennsylvania 17110 where the family were members of the congregation. (FCC, W4WW, ARRL. 2000 Hamvention FCC Forum audio provided by RAIN)

**

ENFORCEMENT: QUICK CALL SIGN RETURN BRINGS FCC THANK-YOU

The FCC has thanked a La Puente California couple for returning forty club call signs back to the availability list. This after Jerry Darby, N6UME and his wife Dorthy N6ZNC gave up on trying to organize a regional earthquake preparedness network.

On August 2, 2001, the FCC wrote the Darby’s concerning the 40 club call signs that the two held. The agency requested supporting documentation for each call. The Darby’s responded very quickly. They told the FCC that they had intended to establish an earthquake network across Southern California but had not been able to do so. Because of this they no longer had a need for the club call signs and that they were being returned.

As a result of the Darby’s quick response the calls have been forwarded the to the Wireless telecommunications Bureau. The FCC says that they will canceled and then made available for reassignment. (FCC)

ATTACK ON AMERICA: BILL RUTH W3HRD KILLED IN PENTAGON ATTACK

Another ham has become a victim of the September 11th terrorist attack on the United States. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the latest sad story on this horrific national tragedy:

--

Bill Ruth, W3HRD, was a veteran of two wars and had of nearly 30 years as a social studies teacher. He has now been declared dead in the September 11th attack on the Pentagon.

According to the Washington Post, Ruth was a retired Army Chief Warrant Officer who lived in Mount Airy Maryland. On the evening of Sept. 10th, he had presided over his first meeting as commander of his local Veterans of Foreign Wars post. The following day he was at work in the Pentagon when a jetliner piloted by a suicide terrorist slammed into the building.

In addition to ham radio, Bill Ruth was described as an avid Redskins fan and a motorcyclist who enjoyed riding in Maryland's rolling hills. A Vietnam and Gulf War veteran, Ruth held a master's degree and taught for nearly three decades, most recently at John T. Baker Middle School in the town of Damascus Maryland.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

Ruth’s death brings to toll to five radio amateurs either confirmed dead or still missing in the attack on America by what the United States government believes to be extremists loyal to Middle East terrorist Osama bin Laden. (Daily DX, Wasahington Post)

**

ATTACK ON AMERICA: HAM SURVIVES AT WTC

A cause to rejoice amidst the chaos in the case of another amateur who worked in the World Trade Center. Rob Nall, WV0S, reports that his friend, Herman Belderok, Jr., KB0EEB, managed to get out of the building just minutes before the structure collapsed. Thankfully, Herman survived unscathed. As reported last week, four hams were at the World Trade Center in New York when the buildings collapsed and have not been seen since. (WV0S)

**

ATTACK ON AMERICA: HOW TO FIND TERRORISTS AND SPIES ON THE AIR - PART 2

Ham radio operators across the nation and around the world continue to look for ways to help in the United States war against terrorism. Some are still providing communications in the New York City area. Others have headed the call by FCC Special Counsel Riley Hollingsworth to watch the radio spectrum and report suspicious transmissions.

Last week, monitoring specialist Joe Schroeder, W9JUV, gave us a bit of insight into what to listen for on the high frequency bands. Joe is back with a look at the spectrum above 50 MHz and the way that terrorists cells might try to use it:

--

FRS probably not an option because there are just to many people on it. There’s not so much the chance of being overheard and having the whistle blown. More likely, some kid is going to inadvertently break in and break up the communications. Especially in a mall or some downtown area.

CB at 27 Mhz is also a no. I would also say that the ham bands are not a good alternative because there is to much of an opportunity for radio amateurs to come across such communications and recognize that it is not normal ham radio talk. What hoes on in the Amateur VHF and UHF bands is so normal sounding that many hams readily recognize all of the voices. If there was something abnormal going on it would stick out much more than on an HF band like 20 or 40 meters.

--

One thing Riley Hollingsworth suggested was to tape any suspicious communications. If you do, we would suggest using fresh tape and also using a direct connection to your recorder from your station receiver. This will eliminate the chance of room noise obscuring what you are trying to record.

And, if you do happen across something that needs to be reported, probably the best place to forward it is directly to the Federal Bureau of Investigation. The FBI has set up a toll free number for leads or other information on the terrorist attack. It’s at area code 866-483-5137. Again, that’s area code 1-866-483-5137. Leads can also be sent via a special website at www.ifccfbi.gov. Please do not contact the FCC.

Also, if you want to hear more on monitoring the world above 50 Mhz for clandestine communications, you are invited to tune in this weeks Rain Report. There you will hear a lot more with Joe Schroeder, W9JUV. You will find it on the web at www.rainreport.com or by phone at 847-827-7246. (ARNewsline(tm))

**

ENFORCEMENT: FCC TELLS HAM HE CANNOT MANUFACTURE AND SELL NON FCC APPROVED AMPLIFIERS

If you have ever wondered what is legal and what is not concerning add on power amplifier in the Amateur Radio service, the FCC has now answered that question. Its also told a South Carolina ham to stop selling non certified amplifiers or face some severe consequences. Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--

The FCC cracks down on RF Electronics owner Sidney Lee Martin of Surfside Beach, South Carolina. The agency tells Martin to lay off selling power amplifiers for use on frequencies below 2 meters. Martin gets a certified letter September 19th from Commission Special Counsel Riley Hollingsworth. In that letter, Martin is told that the amplifiers and kits he's making are not FCC certified and are therefore illegal. He's ordered to immediately stop selling them.

Hams may have seen Martin's classified ads in QST magazine between December

1999 and April 2000.

On February 11th, 2000, the Commission sent Martin a warning about his amplifier kits which were advertised as suitable for 6 meters and the high frequency bands. The agency asked Martin to submit certification numbers for the amplifiers.

Two weeks later, Martin responds, saying he's in compliance with the law. Citing the Commission's Part 97 rules, Martin says it's his opinion that those rules allow every licensed amateur radio operator the right to purchase, build or modify one unit of one model of a non-certified amplifier from another licensed ham each year for personal use. By that statement, Hollingsworth tells Martin, quote--you appear to be claiming that you are an amateur selling only to licensed Amateurs," end quote.

But the Commission rejects Martin's argument. Hollingsworth cites FCC rules which clearly state that all external radio frequency power amplifiers capable of operating on frequencies below 2 meters must be Commission certified. And, the Commission tells Martin, kits are not exempt from this requirement. Hollingsworth goes on to say that hams who use a non-certified amplifier would themselves be in violation of the law. And, he says, using an amplifier built from a non-certified kit on amateur frequencies is illegal.

Hollingsworth cites a statement by Martin in which he says licensed hams are well within their rights under FCC rules to modify and sell amplifiers capable of covering through 10 Meters which makes them non-certified. That statement, Hollingsworth says, is not correct. In fact, Commission rules address modification separately from fabrication and construction. Modification or construction of no more than one unit of one model during a calendar year by a ham without certification of the device is permitted. Hollingsworth says the term fabricated does not include modification of existing amplifiers, but rather, to construct from diverse and usually standardized parts. Modified amplifiers capable of operating between 24 and 35 Mhz, Hollingsworth says, may not be sold.

The Commission also notes advertisements for non-certified power amps on Martin's website, which were said to operate on frequencies below 2 meters. One of those ads mentions a 500 watt kit package, along with a kilowatt kit and a 6 meter amplifier kit.

Hollingsworth tells Martin the Commission has no record of an FCC grant of certification for any of those amplifiers. He says Martin and or his company are not exempt from rules requiring that power amplifier equipment be certified.

Hollingsworth observes that the amplifiers Martin made and sold were marketed as a business and not part of the Amateur Radio service. The Commission says it finds Martin's response not applicable to the products he's making and selling, and says its earlier warning to him remains in effect.

Finally, Hollingsworth tells Martin what will happen if the Commission's order about selling any more non-certified amplifiers or kits is violated. The agency says it will initiate criminal prosecution. And Hollingsworth has one more warning for Martin...any further violations will put Martin's amateur radio license in jeopardy, with the possibility raised of license revocation, suspension and a possible fine.

From Birmingham Alabama, I’m David Black, KB4KCH, for Newsline.

--

The bottom line. If you are currently in the business of supplying non FCC certified amplifiers – even for ham radio use – maybe you had better think again. (FCC)

ENFORCEMENT: FCC TO HAM - STOP THE INTERFERENCE OR BE FINED

The FCC has taken off the gloves in its ongoing battle with another Los Angeles area ham who operates an uncoordinated repeater system. But the ham who owns the repeater appears to not be taking no from the coordinator. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, covers both sides of the story:

--

On August 28th the FCC's Hollingsworth wrote to Angos Winke, KC6OKA telling him at on numerous occasions Winke had been informed that the regions 2 meter repeater coordinating counsel had granted coordination to the Inland Empire Amateur Radio Club which operates a repeater under the call sign W6IER. That the Inland Empire Amateur Radio Club is coordinated for the 145.46 slash 144.86 Mhz frequency pair, the same pair on which Winke has been operating a repeater using various call signs.

Hollingsworth says that he has now referred this matter to the Los Angeles Field Office with instructions to cite Winke and any other operators of the repeater for interference that is being caused to W6IER. He tells Winke that fines in such cases are normally in the range of $7,500. Also, that depending on the evidence obtained by the Field, revocation and suspension issues may also be warranted against Winke's Amateur Radio license.

But Winke appears to be not taking the word “no” from the coordinator as being final. In a letter to the groups Technical Committee Chairman and copied to Newsline, Winke says that -- and we quote -- “As a group of self appointed private citizens purporting to regulate the privatization of frequencies in the public Amateur Radio spectrum, it behooves the TASMA Technical Committee to be candidly responsive to public inquiry into its dealings, and as such be beholden to be responsive to any review of such dealings.

As clearly stated in Title 47, Part 97, Section 101(b), "No frequency will be assigned for the exclusive use of any station." If indeed you still wish to maintain ground on the theory of right to assign frequencies for the exclusive use of any station, you will candidly and truthfully answer all questions materially relating to all aspects of such grant of exclusive use of frequencies.”

From New Orleans Louisiana, I’m Don Wilbanks, KC5MFA.

--

As we go to air, it is unknown if the Committee has responded to KC6OKA, or if it even will. (FCC, KC6OKA)

**

FM AND REPEATER: MAJOR FAILURE IN AZ

The Superstition Amateur Radio Club in Mesa Arizona reports that its WB7TJD two meter repeater is off the air. This, until repairs and some redesign can be done to prevent another catastrophic failure.

According to Larry Kuck, WB7CUK, the failure occurred late Saturday night, September 21 leaving case nearly hot enough to fry an egg. Kuck says that the controller for the 147.12 machine lost power locked the repeater locked on in transmit mode with no audio, no I.D. no cooling fans and no way to control it.

Plans to relocate the repeater to South Mountain in Phoenix and eventually connect our repeater to the Internet for linking have temporarily been placed on hold until the system is brought back on the air. (WB7CUK)

**

*LISTENING IN: SCANNERS BECOMING POPULAR AT RACES

The National Motorsport Racing Association says that some fans aren't content to just watch the action on the race track, they want to hear what's going on inside the cars. And they're willing to pay to hear it.

According to an NMRA press release, one man spent 189 dollars on a 30-channel racing scanner and headphones to listen in during the recent Pepsi 400 race at Michigan International Speedway. He explained that he wanted to hear what the drivers said while they jockeyed for position on the track. And at least one scanner expert says sales of these devices have boomed over the past five years on the professional motor racing circuit. (NMRA)

**

*NEW PRODUCT: VERTEX STANDARD - THE COLORFUL VX-5RS

Meantime, in the new equipment category, Vertex Standard has announced the immediate availability of a Metallic Silver version of is popular VX-5R Triple-Band Hand-Held FM Transceiver. Called the VX-5RS the H-T retains all the powerful features that have made the VX-5R a worldwide sales success but also builds on the success of Vertex Standard's multi-color HT marketing approach in the Marine market. The price of the VX-5RS is the same as that for the VX-5R and is available right now. (Yaesu)

**

*NEW PRODUCTS: NEW FLASHING RED LED BEACON

Are you in need a beacon light for your tower or repeater site? Are you tired of the high monthly electric bills for keeping that light burning? Well a company called Dialight Corporation offers the first LED-based flashing red beacon for marking radio and television towers.

According to the manufacturer, the new model L864 uses 90 percent less power than standard incandescent beacons that consume a minimum of 1,240 watts. And their high-flux Light Emitting Diode array will last years longer than incandescent lamps.

The L864 is designed as a replacement unit for 300 millimeter incandescent flashing red beacons, is FAA compliant, mounts to standard bolt patterns and requires no additional wiring, controllers or monitors. A steady-state red LED obstruction light for side mounting is also available. According to the C-G-C Communicator, more information is on the web at http://www.dialight.com/aviation_pr_redbeacon.htm (CGC Communicator)

**

EMERGING TECHNOLOGY: MOLECULAR COMPUTER INTERFACE

Hewlett-Packard researchers say that they have come up with a way to hook up molecular sized computers to the real world. This, using a type of atomic pixie dust, though the solution exists so far only in a concept -- but one which has won a new U.S. patent.

Phil Kuekes, a computer architect at H-P Labs, that silicon based semiconductors, the brains of current computers, will hit a theoretical wall of improvement in about a decade, while the tiny molecular computers theoretically could be crammed together in invisible spaces and work together on massive problems.

Kuekes and Stan Williams, a colleague at Palo Alto, California-based Hewlett-Packard Labs, received a patent for the work, which builds on a collaboration between the computer maker and scientists at the University of California, Los Angeles. (Published news reports)

RADIOSPORTING: IARU ARDF TO BE HELD IN AUSTRALIA

The Wireless Institute of Australia will host the 5th IARU Region 3 Amateur

Radio Direction Finding championships in 2002. Coordinator Jack Bramham VK3WWW says that with the naming of the W-I-A details including the exact location and timing of the championships can now be planned. An estimated 120 competitors from Japan, Korea, China, Mongolia, Kazakhstan, New Zealand, the United States and Europe are expected to travel down-under for the event. Australia hosted the 2nd IARU Region 3 championships which were held in Townsville, Queensland, in 1996. (Q-News)

**

RADIOSPORTING: 2002 USA ARDF GAMES LOOKING FOR A HOME

And still with news from the world of Amateur Radio Direction Finding, it was only a few weeks ago that Amateur Radio Newsline told you about the results of the first United States A-R-D-F competition. Those were the games held this past summer in Albuquerque. Now it's time to plan for the next one. Here's the United States A-R-D-F Coordinator: Our own Joe Moell K0OV.

--

This is the second, and probably the final call for clubs, club councils and non-club groups interested in hosting the Second USA foxhunting Championships in 2002. This call comes now because the event must take place in the spring or early summer, in order to serve as a qualifying event as Team USA forms for the 2002 World Championships in Slovakia.

This sport, which is also called foxtailing, radio-orienteering and ARDF, has grown dramatically in popularity over the last five years. The first USA Championships, staged by the Albuquerque Amateur Radio Club in early August of this year, drew over 40 competitors vying for medals. Ten states and three foreign countries were represented.

One proposal has already been received for a "weekend championships" in April 2002. If you and the hams in your area wish to make your own proposal, the time to act is now. I must receive preliminary indication of your intent in the next two weeks. Send e-mail to champs@homingin.com, or send postal mail to my callbook address.

For more information about competitive transmitter hunting, on foot or in cars, and for the story of this year's championships, see my Web site: www.homingin.com

From southern California, this is Joe Moell K0OV for the Amateur Radio Newsline

--

Again for more information on this wonderful ham radio sport, please visit Joe’s website at www.homingin.com. (K0OV, ARNewsline(tm))

**

INTERNATIONAL - THAILAND: NEW RECIPROCAL AGREEMENTS

The Thailand - Sweden Reciprocal Agreement has been approved by Parliament and is now awaiting implementation. Separate Austrian, British and Spanish agreements are in still in the final processes of negotiation. (RSGB)

**

DX

In D-X, Oscar Morales, CO2OJ has announced that effective immediately Al Bailey, K8SIX, is his QSL manager. This, for all contacts on all bands and modes made after January 1st of 2001.
CO2OJ also says that he will only reply to those cards with a self addressed stamped envelope or -- as an alternative a self addressed envelope along with IRC or GS coupons to cover postage. He also says that QSL's cards sent via the Bureau will not be answered. Morales adds that this appointment and explanation should end any confusion as to where QSL cards for him should be sent. (CO2OJ via VHF Reflector)

**

THE FINAL ITEM: BANDPLANS ARE IMPORTANT TO THE FCC - PART 1

And finally this week, while voluntary bandplans in ham radio are not covered by the FCC rules it is no secret that the Commission favors all hams adhering to them. Most hams do, but there are some who really do not understand the importance and a small but vocal group who simply refuse. In a recent question and answer session on Hap Holly’s Rain Report, the FCC’s Riley Hollingsworth took the time to explain the Commission’s position on these plans and the reason behind it:

--

“Bandplans help regulate the Amateur spectrum and they minimize the necessity for the Commission to become involved in Amateur Radio problems and disputes. And, they also allow Amateurs to use and experiment with such modes as narrow-band, PSK-31, QRP and so forth that might otherwise be trampled and crowded out.”

“So the policy is where an operator is not following a bandplan, and there is harmful interference as a result of it, the Commission will consider it deliberate or malicious interference unless substantial justification can be shown by the operator who is not abiding by the bandplan.”
--

Hollingsworth says that coming off of three years of enforcement in the Amateur Service that there are really only two types of bandplan problems:

--

“One is the operator interfering honestly did not know about the bandplans. Number two -- the operator knew about the bandplans and does not like the bandplans because they are totally focused on rights and could care less about responsibility. They don’t care about the damage they do to Amateur Radio and don’t have a clue as to how much pressure is on our frequencies from entities that would like to see them taken away. “

--

What can the FCC do to assist the Amateur Radio community in getting adherence to these voluntary plans? We will have that in next weeks Amateur Radio Newsline report. (RAIN, FCC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). ARNewsline™ Report 1258 – September 21 2001

(Note: * Notes print edition only stories)

Amateur Radio Newsline report number 1258 with a release date of Friday, September 21 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. Four ham radio operators appear to have been lost in the September 11th terrorist attack in New York. This sad story is first on Amateur Radio Newsline report number 1257 coming to you right now.

(Billboard Cart Here)

**

ATTACK ON AMERICA: FOUR HAMS MISSING IN WTC TERRORIST ATTACK

The September 11th terrorist attack on the World Trade Center in New York City that lead to its collapse also took most broadcast television off the air as well . Also destroyed were several radio station transmitters and a few amateur repeaters. And now its been learned that there was a human loss for ham radio as well. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the latest:

--

The ARRL Letter reports that at least four Amateur Radio operators are among the many still missing the aftermath of the attack. They include Steve Jacobson, N2SJ, age 53, of New York City. Jacobson worked as a transmitter engineer for WPIX channel 11. Also, on transmitter duty at the time of the attack was Bill Steckman, WA2ACW. of West Hempstead out on Long Island. He is employed by WNBC channel 4 and is well know in the area for a number of repeaters he operated from the World Trade Center. Most notable among them a 434 Mhz ATV system.

Another missing ham is Robert D. Cirri Sr., KA2OTD, of Nutley, New Jersey. Cirri is a Port Authority police officer and the ARRL District Emergency Coordinator for Hudson County. He was last seen helping to evacuate workers from one of the buildings when it collapsed.

Also, Michael G. Jacobs, AA1GO of Danbury, Connecticut who works at Fiduciary Trust Company International, which had offices in the World Trade Center. He too has not been seen since the twin towers collapsed.

Meanwhile, hams worldwide are praying for a miracle. A miracle that maybe they and others who were in the twin towers when they collapsed have escaped but have not yet reported in. Or that they are under the rubble -- still alive -- and that rescue workers will reach them in time.

Reporting from near the disaster scene, I’m Henry Feinberg, K2SSQ, for the Amateur Radio Newsline.

--

The ARRL says that Amateur Radio operators are still needed to help in the relief efforts. Those who would like to volunteer for communications duty in support of the relief effort at the Word Trade Center in New York City may now register on line. To do so, take your web browser to http://wtc.ab2m net, read the instructions and fill out the on-line form. Again that web address is http://wtc.ab2m.net. There is no w-w-w used in this website URL. The ARRL adds that amateurs from outside the Greater New York City area who are asked to report for duty are requested to alert their section managers first.   (ARRL)

**

ATTACK ON AMERICA: THE NYC BROADCASTING SITUATION

As to over the air television in the New York City metro area, Bob Gonsett’s CGC Communicator newsletter reports that only WCBS channel 2 is on with any really wide coverage signal. Unlike all other broadcasters that made the move to the World Trade tower back in the 1970’s, WCBS decided to maintain its longtime transmitter site on the Empire State Building as an off site back-up. When everyone was put off the air by the World Trade Center collapse, WCBS switched over to its Empire State Building site. It immediately became the lifeline of information to a city that needed to know what was happening

Meantime, other broadcasters are scurrying to find and transport new or used transmitters to the Empire State Building where some still have their old antennas and feeder lines on the Empire Tower. WCBS has offered assistance and space to help the stations get back on the air from the Empire State Building site. Both Canadian transmitter supplier Larcan and American manufacturer Gates do have high power VHF transmitters available and are reportedly shipping as we go to air.   (CGC Communicator, Radio World, ARNewsline (tm))

**

ATTACK ON AMERICA: LA COUNTY RACES ACTIVATES

This is Andy Jarema, N6TCQ at our studios in Hollywood with the West Coast part of the "Attack on America" story.

Because 3 of the 4 involved aircraft in this attack had Los Angeles as their destination, both the LAPD and the Los Angeles County Sheriffs Department went on tactical alert the morning of Tuesday the 11th. This activated the EOC's, the Emergency Operation Centers, and therefore the LA County version of RACES, the DCS or Disaster Communications Service swung into action.

There's a multi-band Amateur Radio station set up in or near the EOC in each of about 25 Sheriff's stations around the LA area. There are also stations set up at major industrial facilities, such as NASA's Jet Propulsion Laboratory in Pasadena. These stations work with the EOCs in coordinating traffic with other county and city agencies, hospitals, and the Red Cross. All stations were up shortly, with almost 100 hams also checking in from field locations.

As of this newscast, the EOC's remain on alert, but the DCS nets have been shut down. Andy Jarema, N6TCQ (ARNewsline(tm))

**

ATTACK ON AMERICA: PERCAUTION - FCC BUILDING EVACUATED BRIEFLY

The FCC headquarters in at the Portals in southwest Washington was temporarily evacuated Monday morning, September 17th. This, after an unidentified package was discovered and checked out. According to the C-G-C Communicator, the incident occurred at about 10:15 a.m. eastern time. FCC spokesman David Fisk says that the employees were evacuated as a cautionary measure. About 10 minutes later an all-clear signal was given and employees were allowed back into the building. (CGC Communicator)

**

ATTACK ON AMERICA: KUWAIT HAMS SAY WE SUPPORT THE USA

Support for the people of the United States is coming from every corner of the world including the nations of the Middle East. And now on nation society in that region has gone a step further.

Effective September 15th the Kuwait Amateur Radio Society, in conjunction with the Kuwait Ministry of Communications, has authorized the use of the call sign 9K2USA. According to Bob Furzer, K4CY, who is in Kuwait and licensed as 9K2ZZ, all ham operators in Kuwait will use the 9K2USA call on all bands, on all modes simultaneously through the end of September. This, says Furzer, as a small token of the sympathy and support for the people of the United States from the people of Kuwait.

Bob adds that the Kuwait Amateur Radio Society will be doing the QSL chores. The actual QSL card design to be used for the 9K2USA card will be chosen by the society at a later date. KARS says that it will also put together a common database and all incoming QSLs will be via 9K2RA. At this time, Electronic QSL’ing might be best. The e-mail address is 9K2RA@KARS.ORG. And in case you have not yet figured out the significance of this very kind gesture, the special call sign phoneticizes as “NINE KILO TWO UNITED STATES of AMERICA.”

More ham radio reaction from around the world later on in this weeks report. (QCWA)

**

BREAK 1

From the United States of America, this is the Amateur Radio Newsline heard on bulletin stations around the world, including the KE7LE repeater serving Seattle and Tacoma in Washington state.

**

ATTACK ON AMERICA: HOW TO FIND TERRORISTS AND SPIES ON THE AIR - PART 1

Shortly after the terrorist attacks on the World Trade Center and the Pentagon, FCC Special Counsel Riley Hollingsworth asked radio amateurs to keep their ears open and report any suspicious or clandestine communications to him. But many hams probably do not know what to listen for. An expert in this area is Chicago area ham Joe Schroeder, W9JUV. We asked Joe to give us an inkling of what we all should be listening for:

--
In-Q: Anytime you run across...
Out-Q: ...in English if they do.
--

Joe Schroeder has a lot more to monitoring for terrorist communications than we can possibly cover in our newscast, but you can hear it. Part one of our two part interview with W9JUV is on the web right now in Real Audio at www.rainreport.com. Its also available on the phone at 847-827-7246. Thats 847 - 827 - R-A-I-N.

One last item. If you do happen across something that needs to be reported, you will need to know where to take your information. Those who have been watching T-V or reading newspapers already know that a Federal Bureau of Investigation task force is assigned to head up the domestic aspect of the investigation. It has also requested all media outlets let the public know that it would like any leads reported directly to it. To accomplish this, the FBI has set up a toll free number area code 866-483-5137. Again, that’s area code 866-483-5137. Information can also be sent via a special website at www.ifccfbi.gov. The FCC’s Hollingsworth can be contacted by e-mail to fccham@fcc.gov. All these addresses and other resources are at the very top of our web page at www.arnewsline.org. (ARNewsline(tm))

**

ENFORCEMENT: A REPEATER LICENSE HOLDERS RESPONSIBILITY

Turning to other news, word that a repeater license holder who takes no action to curtail chronic violations on his or her system can be held responsible for these activities. Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--

If you own a repeater but pay little attention to what goes out on the air, you may want to re-think that policy. The FCC zeroes in not just on a repeater, but the people who own and run it. Lamirada California resident Kathryn Tucker, AA6TK, gets a stern notice from Commission Special Counsel Riley Hollingsworth.

The message to Tucker is one other amateur repeater owners may be wise to heed. Occasional violations allowed over the air may be understandable. But frequent violations, with the repeater owner showing little or no effort to stop them from airing, are something else.

Tucker is listed as trustee of the W6NUT repeater, a system the FCC has been monitoring and not liking. On February 20th, The Commission contacted Tucker. The FCC says it had received complaints of long periods of jamming by users, broadcasting and transmissions of music. Furthermore, the Commission says the repeater's Control Operator failed to act to stop the offensive signals. And, Hollingsworth says, extensive monitoring showed no control operator was present.

On March 13th, Kathryn Tucker answered the FCC by saying that Roy Tucker, N6TK, has always been the repeater's control operator. Kathryn Tucker also said Roy Tucker is on duty as the control operator “24 hours a day, 7 days a week, 52 weeks out of the year and that he always uses automatic control except when remote control is appropriate…”

In his September 7th letter, Hollingsworth tells Tucker she's losing authority to operate the repeater under automatic control. And the Commission is asking that Kathryn Tucker, as trustee, provide documentation showing that she designated Roy as the repeater's Control Operator. Hollingsworth also asks that Kathryn Tucker describe in detail the devices and procedures used for controlling the repeater. And, since Kathryn Tucker explained that a control operator was not on duty during the incidents the FCC cited, she's asked to explain the apparent discrepancy posed by her response that a control operator is on duty around the clock. Furthermore, she is asked to state her authority for operating an amateur service station without a control operator.

Tucker commented that the control operator operates usually under automatic control which does not require a person to be physically present monitoring the frequency. Hollingsworth says that statement is in error.

Addressing Tucker, Hollingsworth says her response indicates quote: “that you are seriously misinformed as to the Commission’s rule concerning inadvertent violations--as opposed, he notes, to violations that are repetitive or continue for hours or days.” Hollingsworth says that--while the Commission’s policy has been to hold the control operator of the station originating a prohibited communication primarily responsible--this policy does not relieve the the repeater's control operator of responsibility to insure immediate proper station operation, regardless of the type of control. Again quoting Hollingsworth: “Given your response, it is evident that you do not understand the duties of a control operator.”

The FCC then asks for information demonstrating that the repeater can comply with Commission rules without a control operator being present at a control point. Again citing Kathryn Tucker's comment that Roy Tucker is on duty around the clock all year long, Hollingsworth makes a request. Kathryn and or Roy Tucker are asked to submit a detailed time and usage study of the repeater's operation for 14 consecutive 24 hour periods. The study is to show dates, times and lengths of transmissions on the repeater, along with information on callsigns used, and even summaries of what the transmissions were about. The Tuckers are to note any apparent violations of FCC rules, and the times the Control Operator took action to deal with the violations. Even when the repeater is turned off is to be logged.

Finally, the Tuckers have 30 days to submit their responses and other requested material to the FCC.

From Birmingham Alabama, Im David Black, KB4KCH, for the Amateur Radio Newsline.
--

What is very important is that repeater owners do not panic and institute new operating rules that are not needed or justifiable. If you already run a clean ship and once in a great while someone says something he or she is not supposed to, its nothing to worry about. The FCC is not going to go after you. On the other hand, if you run a repeater where there are day to day chronic violators and to take no action to curtail this kind of operation, one of these days you too might receive a letter like this from the FCC. (FCC)

**

IARU: REGION 2 MEETS THIS OCTOBER

Delegates from national Amateur Radio societies from all over the Americas will be meeting in October at the IARU Region 2 Conference in Guatemala City. These conferences are held once every three years in each of the three IARU Regions.

On the conference agenda will be some very important issues including the WRC 2003 items on the proposed realignment of the 40 meter band and possible changes to the ITU regulations governing Amateur Radio. There will also be some administrative matters discussed. This includes a proposal to revise and update the by-laws and constitution of IARU Region 2. There is also a proposal to increase the size of the Region 2 Executive Committee.

More information about the Conference can be found on the IARU Region 2 Web site at www.iaru-2.org. (IARU)

**

EMERGING TECHNOLOGY: DATA AS RF OVERE POWER LINES

Last week we told you that data transmission over power lines was now a reality in Germany. But were you aware that experiments with this system are also taking place here in the United Stated? It is -- and Q-News Graham Kemp, VK4BB, has the details:

--

The systems is made by Main.net as an example use frequencies between 1MHz and 30MHz to send data from the home to the local power substation.

"There are no more technical problems. The radiation is under the allowed level, although radio amateurs aren't happy with us offering the service," said Andreas Preuss, a spokesman for RWE Powerline GmbH. Despite radio operators fears, there have been no reports of radio interference, he said.

Main.net and Ascom are running trials in seven European countries, as well as in some Asian countries. Power line networking wasn't seen as economically viable in the U.S. for a long time, because the electricity grid is different.

Trials of the new technology in the U.S. are just beginning, with Main.net / PowerTrust of Reston, Virginia. The exact location of the trials remains a secret, for now.

For Q-News Australia, I'm Graham Kemp, VK4BB, reporting for Newsline.
--

Kemp adds that data transmission over power lines is bound to widen. This is especially true in countries where the telecommunications infrastructure is limited like China and parts of Latin America. (Q-News)

**

*NETS: UPPER CUMBERLAND 2 METER NET

According to the VHF Reflector that the Upper Cumberland 2 Meter S-S-B Net meets every Thursday Night 01:00 UTC on 144.225 MHz. The Net Manager is N2BR located in Algood Tennessee.

**

*HAM RADIO BUSINESS: QRZ WEBSITE WITHDRAWN FROM SALE

The QRZ.com website is no longer up for sale. Site owner Fred Lloyd AA7BQ, says that after having had time to think it all over he has decided to withdraw QRZ from the dot com for dale market and will continue the operation.

Lloyd says that he is truly appreciative of the support he has received from his fellow hams, patrons and advertisers. He also pledges to continue to do the best that he can to maintain QRZ.com in the same tradition that made it what it is today.

(5 sec pause here)

**

HAM RADIO BUSINESS: GEORGE JACOBS, W3ASK, TO RETIRE FROM CQ MAGAZINE COLUMN

After more than a half century of writing CQ magazine's monthly Propagation column, George Jacobs, W3ASK, will be stepping down as the magazine's Propagation Editor at the end of the year. Jacobs, who celebrated his 50th anniversary in the position last March, will remain on the CQ staff as Contributing Editor Emeritus and will continue to author feature articles about radio wave propagation as well as personal reminiscences of his more than 60 years as a leader in both amateur and broadcast radio.

Jacobs became CQ Propagation Editor in March, 1951, and has produced a column every month since, never missing a deadline, even while traveling to distant countries. W3ASK was also one of the fathers of the OSCAR amateur satellite program and served as CQ's Space Communications Editor prior to the launch of OSCAR-1 in 1961.

In his professional career, Jacobs was instrumental in building the Voice of America's worldwide shortwave network as well as other shortwave broadcasting facilities. A world-renowned expert in radio wave propagation, he continues to run a broadcast consulting company in suburban Washington, DC. And last May, W3ASK was honored by the Dayton Hamvention as its "Amateur of the Year." This, in recognition not only of his contributions to amateur radio but to broadcasting as well.

Jacobs says he's giving up the propagation column because he and his wife want to travel without the restrictions imposed by a monthly deadline. CQ Magazine says that he will be succeeded as Propagation Editor by Tomas Hood, NW7US, as of the January, 2002, issue of CQ Magazine. (CQ)

**

EMERGING TECHNOLOGY: WSJT - A NEW WAY TO WORK THE ROCKS

A newly developed software program walled WSJT is taking ham radio by storm. This is because it permits just about anyone with a decent multi-mode V-H-F transceiver to try his or her hand at the art of meteor scatter communications. And now it has even gained some publicity on a popular shortwave radio show. Amateur Radio Newsline’s Bill Burnett, KT4SB, reports from Miami:

--

Russ Pillsbury, K2TXB, says over the VHF Reflector that he recently heard from Professor Arnie Coro, CO2KK. Coro, who runs a radio show in Cuba called "Doers Unlimited" heard about Pillsbury's recent contact with Oscar Morals, CO2OJ and featured it on his program. During the show Coro said that K2TXB in the United States and CO2OhJ in Cuba are now the North America and the Caribbean are now the record holders for meteor scatter communications. CO2KK also asked where he could download the amazing new software for his own use. In Miami, I‘m Bill Burnett, KT4SB, for the Amateur Radio Newsline.

--

Well we have the information for everyone on where W-S-J-T software can be found. Its on the web at: http://pulsar.princeton.edu/~joe/K1JT (VHF Reflector)

**

EMERGING TECHNOLOGY: NEW MAP SOFTWARE OFFERS PROMISE FOR APRS

A new software package produced with the AAA auto club promises travelers much more than directions for upcoming road trips. Even better, the maps could find a place in ham radio.

Not only does DeLorme's new AAA Map 'n' Go 7.0 software print detailed maps and identify lodging. It also can create sightseeing itineraries, determine how much gas you will need to make the trip and money you will need to pay your way.

Getting basic directions and a map using the software is reported to be very easy. All you need to do is to type in your point of departure and destination, then click "go." Within seconds, the computer spits out a map with the route highlighted in blue, alongside written directions. All that’s needed is for some enterprising ham to find a way to partner the program with a computer set for A-P-R-S readout and you can know almost to the foot the exact location of any beaconing station.

The CD-ROM, distributed by DeLorme through a partnership with the AAA. It sells for $29.95 but requires Windows 95, 98, 2000, Me, NT or later; a Pentium-class 150 MHz or higher processor; 16 MB RAM; 30 MB available disk space; a CD ROM drive and a 256-color monitor with Super VGA graphics. A Windows-compatible printer, sound card and speakers are also recommended. (AAA. DeLorme)

**

RADIOSPORTS: NEW VHF CONTESTING REMAILER

Tim Duffy K3LR reports the creation of a new Internet reflector for VHF Contest discussions. Its called vhf-contesting@contesting.com. More information can be found at www.contesting.com/articles/90 on the World Wide Web. (VHF Reflector)

**

AWARDS: CQ MILLENNIUM AWARD CERTIFICATES - SOON

CQ magazine says that its CQ Millennium Award certificates have finally come in and the staff has begun processing the applications in the order received. Certificates should begin going into the mail within the next few weeks. (CQ)

**

DX

In D-X, word that the GB3BUX 6 and 4-meter beacons are back on the air. Jeramy Boot, G4NJH, has more:

--

The GB3BUX beacons, located just south of Buxton in Derbyshire, are back on the air. GB3BUX operates on exactly 50.000 and 70.000MHz. The two beacons returned to service at 1830UTC on the 1st of August. Each beacon operates at 25 watts ERP. The antenna system is omnidirectional with horizontal polarization from twin stacked turnstiles at about 15 feet above ground level.

There is, however, a change to the previous keying sequence in order to allow users to examine the signal at 10 sweeps a second on an oscilloscope for propagation studies. During each second, there is now a 10 millisecond carrier break every 100 milliseconds, with a 40 millisecond break on the second. The callsign identifications remain the same as before - "GB3BUX" on the minute and "GB3BUX IO93BF" on the five-minute mark.

Jeramy Boot, G4NJH

--

Thanks Jeramy. (G4NJH, RSGB)

In other DX related news, Wayne Mills, N7NG, says that the late Iris Colvin, W6QL, and Lloyd Colvin, W6KG, operating as a team worked, confirmed, and received DXCC from more than 100 countries. Mills says this fact has now been established as research continues on biographies of the Colvins. The biographies' author, Jim Cain, K1TN, continues to seek information, photos, and anecdotes on the Colvins and on the early Yasme days. He can be reached at yasmebook@mybizz.net. (N7NG)

THAT FINAL ITEM: FROM VK TO THE USA - OUR PRAYERS ARE WITH YOU

And finally this week, we leave you with the words of an Australian ham to his ham radio brethren here in the United States. The words of Wireless Institute of Australia Federal President Earnest Hocking, VK1LK, sent to all of us via ARRL President Jim Haynie, W5JBP as Hocking expresses his feelings on the terrorist attack against our nation. Words which are obviously from the heart:

--

“It was with great sadness that I heard the news of the attack on New York, the Pentagon and other US sites. As many have already said words simply fail us at times such as this.

As the representative of the amateur radio community in Australia I believe that I speak for all radio amateurs when I extend my condolences and thoughts to all of the victims and their relatives of this attack. I have no doubt that many American amateurs and their families have been directly affected by this cowardly act of terrorism and I would like to express my personnel feelings of sadness to these members of the amateur radio community.

As part of the world wide amateur radio community Australian amateurs have many friend and relatives in the US and as such many of us are wondering how these friends are faring.

I note with pride however, that in this as in many other such situations, amateurs have already offered their services through the ARRL and its various emergency service organisations to provide assistance to both individuals and the wider community affected by this disaster. This spirit is especially significant in this the International Year of the Volunteer.

Our thoughts and best wishes go out to all American amateurs involved in the valiant rescue efforts currently underway.   I feel sure that all amateurs in Australia will be watching the developments in the US carefully over the next few days and many of us wish that we were better placed to provide assistance to those in need at this time.”

--

Speaking for all listeners to this newscast, we thank you President Hocking -- and we thank all the hams of Australia -- for caring about all of us so very, very much. (Q-News)

I just did a new install of a Kenwood TM-D700A and I am getting alternator noise on receive coming from the external speaker. The control unit is mounted in the trunk, (car battery is also in trunk) and the control head and speaker is located up front. There is no alternator noise on transmit, but I can hear the whine on the speaker when I drive.

Any ideas on how to correct this? Will toroids cores wrap on the speaker wire help?

Thanks.

Herb

This might be too specific for this group, but:

I just got a TM-V7A and wanted to connect to it through the MCP_V7A software but am having a problem. I am running Windows 2000 on a laptop and have the COM1 settings at 9600,n,8,1. For flow control I have tried Hardware and none.

I am getting Communications Timed out error. There are NO instructions anywhere on how this is supposed to work.

Do you know what port settings I should use? Does the radio need to be in a certain mode?

Thanks in advance. . .

Hi Glen,

Kinda nice to hear the 'real' PG-4S does this too. I've used a 'workalike' to the PG-4S (see my web site for details) and run into this often. I've always gotten things to work eveentually, but it sure does seem to be picky.

Things to check:

Select correct com port under 'radio' menu.
Radio and program are setup with the same VHF to UHF ratio.
I'd suggest hardware flow control. The workalike uses these signals -

I'd assume the real PG-4S does as well. But the MCP software should properly configure your port via the API anyway.

Radio dosen't seem to need to be in any particular mode/configuration - software is supposed to put it in the correct mode on it's own. I usually just have it in the normal 'scan' mode, VHF and UHF. When the MCP software 'connects' it goes to VFO on both sides.

If those kinds of obvious things don't fix your problem, you need to start 'at the top' and go on. Proove your serial port is working correctly, then the cable is OK, etc, etc...

Take a look at my web site (URL in my sig block), something there or linked may be of use to you.

Good luck!

Greetings,

The recent widespread DX cluster abuse has been brought about by a like minded individual making us, at LPWS HQ, aware of Internet to DX cluster access.

There are several programs, but we have favoured DX-Telnet, copies of which are available for free download from our club web site at
http://www.laughingpoliceman.com
Go to either the DX cluster listings or the free downloads pages.

Please note that to change your victims call sign you need to go to Configuration/Personal Info as the program starts up with the last call used.

Have fun, just use ann/full before your words of wisdom etc. Bulletins can be sent as well as personal messages, for instructions type ? when connected.

G8ASO

"Courier" and "Thunderbolt" do sound like CB amp's but they may well be too old to be illegal. They'd be useable on 10 meters and possibly other bands provided they don't generate too much harmonic power. I have zero knowledge of there particular units but most old tube amps date back to the days before 11m became CB and some are of decent quality. They're worth little $$ but if I had them I'd try them on 10m then other bands

after checking harmonics and adding a low-pass filter if needed;
especially if I also had an old SSB CB I could convert to 10m.

I hear the same about Harley Davidsons; mostly from folks who've never
owned one.

About 20 years ago I "liberated" 2 RF amps from CBrs and made a lot of
CW contacts driving them with a kit-built QRP rig. Both amps are as well
made as any of the 2-meter bricks I've bought since, and neither made
TVI, so I suspect that their rep for harmonic generation & distortion
comes from CBrs and Appliance Hams over driving them; altho a good
lo-pass filter makes good insurance.

A mod'd CB driving a "linear" followed by a filter may be junk compared
to the latest & greatest digital off-the-shelf appliances but just might
be more in the spirit of Amateur radio. My 250-watter claims to work on
"all amateur bands". It plus a Yaesu FT-817 otta be FB if that were true
and who knows? Maybe I'll dig them out, QRP my Kenwood and find out.
Isn't that what amateur radio's all about?

Greetings...just purchased a 2002 Toyota Tundra pickup. Installed an FT900 and the ATAS 100 antenna. Everything works great, except the level of ignition noise on 40 Mtrs. No problem on any other bands that I use, just 40. Any suggestions on how to decrease or eliminate the ignition noise? We know its not the fuel pump so that was a plus! I've ran about six braided ground straps to different parts of the frame and body, a little difference but not much. Thanks & 73...

I'm trying to find some switches and I don't know what the proper name is for them. They are a row of push-button switches where when you press one the others pop out - like in a RadioShack A-B-C push-button box, or like on a multi-line telephone. I know there are a lot of devices/control panels that use such push-buttons, I just can't find a source for them.

I "thought" they were called gang switches, but searching for that name hasn't yielded any matches so maybe my memory isn't as good as I thought it was.

Can anyone tell me the correct name for the switches I am looking for?
Anyone know of a source?

TNX & 73 - Michael - KD5BBC

hey roger
have you tried replacing the spark plugs with resistor types and also
maybe change out the spark plug wires to some really heavy ones
good luck

AMATEUR RADIO NEWSLINE(tm) REPORT #1260 - OCT. 5, 2001

Amateur Radio Newsline report number 1260 with a release date of Friday, October 5th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A big week for ham radio in space as A-O 40 proves G-P-S works in space and P C

Sat goes into orbit. These stories are first on Amateur Radio Newsline report number 1260 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: GPS EXPERIMENT COULD REVOLUTIONIZE SPACE TRAVEL

AMSAT reports another success with its AO 40 satellite that holds the promise of changing the way men travel into space. This, with word that that the on board Global Positioning System -- or G-P-S experiment has now undergone successful testing. Roy Neal, K6DUE, has the details:

--

ABOUT 20 YEARS AGO THE AIR FORCE PUT A RING OF SATELLITES IN ORBIT CALLED THE GLOBAL POSITIONING SYSTEM, “G-P-S”. THEY WERE DESIGNED TO SHOW WHERE IN THE WORLD YOU ARE, WITH PINPOINT ACCURACY. THE AIR FORCE USED THEM TO GUIDE MISSILES AND MILITARY AIRCRAFT.

THE SYSTEM WAS MADE AVAILABLE FOR PUBLIC USE A FEW YEARS LATER AND HAS BECAME A MAINSTAY FOR NAVIGATING AIRLINERS, SHIPS AT SEA, TRUCKS AND CARS ON THE HIGHWAYS AND EVEN HIKERS . NASA WANTED TO KNOW IF GPS ALSO COULD BE USED TO PROVIDE POSITIONAL DATA OUTSIDE ITS RING OF SATELLITES. THE SPACE AGENCY TURNED TO AMATEUR RADIO’S AMSAT CORPORATION TO HELP WITH AN EXPERIMENT.

NASA PROVIDED TWO G-P-S RECEIVERS WHICH WERE INSTALLED ON THE A0-40 SATELLITE. THE “A” RECEIVER TO TUNE IN AT APOGEE, THE HIGHEST POINT IN ORBIT., THE “B” RECEIVER WOULD LISTEN AT PERIGEE, THE LOW POINT.

JIM WHITE, WD0E, THE AMSAT COORDINATOR AND CHIEF OPERATOR, HAS JUST MADE HIS FIRST REPORT ON THE ACTIVITY. HE SAID ”WE RECEIVED A SIGNAL FROM ABOUT 52 THOUSAND KILOMETERS OUT WITH GOOD SIGNAL LEVELS. FURTHER DATE IS BEING GATHERED AND THOSE DOWNLOADED SO FAR ARE BEING ANALYZED.”

THEY WERE DOWNLINKED THROUGH THE A0-40 S-BAND TRANSMITTER. AMSAT VICE PRESIDENT FRANK BAUER, KA3HDO, WHO WAS INSTRUMENTAL IN SETTING UP THE EXPERIMENT, SAID IT WILL REVOLUTIONIZE THE WAY GPS IS USED IN SPACE. BAUER SAID MANY FUTURE HIGH EARTH ORBITING SATELLITES WILL BE ABLE TO TAKE ADVANTAGE OF GPS FOR AUTONOMOUS NAVIGATION AND STATIONKEEPING

FOR THE AMATEUR RADIO NEWSLINE…ROY NEAL, K6DUE.

--

The bottom line. It now looks as if a ham radio satellite may help change the way men and machines travel to and from space. (AMSAT, K6DUE)

**

HAM RADIO IN SPACE: KODIAK STAR ORBITS PCSAT

The long awaited Kodiak Star launch, carrying the P C SAT ham radio satellite into orbit is a success. According to the AMSAT News Service, the launch took place from Kodiak Alaska at 02:40 UTC on Sunday morning September 30th.

Initial Information indicates that all satellites were successfully deployed, and that the amateur radio satellites have been heard by hams in many countries. One of the first reports came from Derek Studholme ZL1AKJ of AMSAT-New Zealand. Derek said that stations down-under heard good telemetry signals from P C Sat's first two passes over New Zealand

The launch of the Kodiak Star had been delayed several times due to weather conditions and Solar Flares. On board the launch vehicle were the P C Sat, Sapphire and Starshine satellites. P C Sat is a Naval Academy Amateur Radio satellite. The Sapphire satellite also has Naval Academy involvement in a joint venture with Washington University. Starshine was the primary NASA payload. (AMSAT Remailer, VHF Reflector, ZL1AKJ)

**

ATTACK ON AMERICA: TWO MORE HAMS MISSING AT WTC

Amateur radio operations have now wound down but there is more sad news from what's become known as 'Ground Zero' in New York City. It now appears that two more hams may have lost their lives in the terrorist attack on the World Trade Center.

The ARRL Letter says that Rod Coppola, KA2KET, was the transmitter engineer on duty for Public Broadcasting station WNET, channel 13 at the time the attack occurred. Coppola is 46 and lives in New York City.

Also missing is Winston Grant, KA2DRF. Grant is a computer technician with Empire Blue Cross - Blue Shield. He is 59 and lives in West Hempstead, New York. Neither man has been seen since the twin towers collapsed after being hit by hijacked jetliners on September 11th. (ARRL)

**

ATTACK ON AMERICA: FINANCIAL ASSISTANCE FOR MISSING ENGINEERS FAMILIES

In a related development, the Portland Chapter of the Society of Broadcast Engineers and the ARRL both report that a fund has been established to assist the families of broadcast engineers still missing at the collapsed World Trade Center. Checks can be sent to the Ennes Educational Foundation Trust % The Society of Broadcast Engineers Inc, 9247 N Meridian St., Suite 305, Indianapolis, Indiana. The Zipcode is 46260. Please mark your envelope to the attention of the "Broadcast Engineer Relief Fund." (ARRL, Portland SBE)

**

AMERICA UNDER ATTACK: INDIANA HAMS SET UP COMMS AT GROUND ZERO

Ham radio operators from Indiana were among those who made the trek to New York

City to aid in rescue efforts after the September 11th terrorist attack. Their job was communications. Amateur News Weekly's Jack Parker, W8ISH, has more:

--

Thirty-six hours after the first airplane crashed into the World Trade Center Indiana's Task Force One was standing at the ground zero. Among the 62 members of this elite Search and Rescue team were two Indianapolis amateur radio operators.

Veteran firefighter Jim Curseaden, KB9ZFF and Ed Elrod, W9PTO made the 14 hour road trip to help with disaster efforts. Both men make up the communications arm of this search and rescue team.

The moment they arrived each man began setting up a UHF communications link from the ground zero to their staging point several miles away at the Javis convention center. According to Jim Curseaden, getting UHF signals through the concrete canyon of New York City was a major challenge.

Ed Elrod said they first installed a repeater on a nearby building and directed a
Yagi antenna at the mountain of rubble. The Javis convention center posed another radio obstacle. Hand held radios could not reach the repeater.

To fix this problem, Elrod wired a up a remote base on the roof of the convention
center. This new link made it possible to communicate with the Indiana search and rescue personnel above and below the world trade center ruins. Ed Elrods most inspirational moment came during his second trip out of the devastation.

All week hundreds of people had been lining the streets, cheering and showing signs of support. When heavy rains began dousing New York the crowds disappeared...He said the contrast was amazing. The streets were nearly empty; except for one lonely figure standing in the rain. It was an elderly woman, holding a sign that read: "Thank You."

Reporting from Indianapolis, this is Jack Parker, W8ISH

--

The hams from Indianapolis were not the only ones who traveled to New York City to help in relief efforts. We plan to profile others in future Amateur Radio Newsline reports. (ARN, W8ISH)

ATTACK ON AMERICA: DOD WILL NOT GIVE UP ESSENTIAL SPECTRUM

In the wake of the September 11th terrorist attacks on New York City and the Pentagon, the Defense Department has renewed support for its view that it shouldn't give up its spectrum to make room for consumer wireless products. Congressional auditors say that the proposed changes now could pose a further threat to national security. Amateur Radio Newsline’s Norm Seeley, KI7UP, has more

--

Supporters of the mobile communications industry still say that transfer of some current military spectrum to the private sector is essential to fill the high demand for such services as the next generation of mobile phones and wireless Internet access. But Congresses’ General Accounting Office says that if the Defense Department makes room for new wireless consumer products before more research is conducted, it could endanger the nation because of potential interference with Pentagon operations.

And it goes even further. Defense Department officials say that besides creating interference, moving all defense systems out of the current spectrum would take until 2017. That, says the DoD, would cost billions of dollars to orbit new satellites and otherwise accommodate military needs.

In the meantime, the Federal Communications Commission announced on September 24th that it will expand the possible uses of the 2500 to 2690 MHz band. That spectrum is currently used for fixed wireless services. New rues may eventually include a mobile component so that the spectrum can be used for 3 G services such as high-speed Internet access or music and video downloads.

The FCC says that it had considered reallocating the 2500 to 2690 band as a primary allocation to new 3 G wireless service. Because of the outcry against taking the spectrum from schools and other incumbent users it instead voted to create a possible shared allocation instead.

The FCC says that the flexible allocation would allow some portable data applications to be offered under existing service rules and could provide flexibility for offering other new advanced fixed and mobile services in the future. But it added that it would have to explore service rules that would apply to allow mobile operations in the band in a separate future rule-making proceeding.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

A September 2002 deadline by Congress for an auction of new spectrum licenses for wireless services might be delayed because of the Pentagon's resistance to any allocation change. (Published news reports, FCC actions)

**

AMERICA UNDER ATTACK: HAM RADIO TRACKS THE RUN FOR AMERICA

They did it to show support to the firefighters, law enforcement agents and all Americans involved in the effort to rescue the victims of the recent act of terrorism. This, as Navy Ensigns Daniel Campos and Christine Fix, coordinated a relay run to carry our national flag from Virginia to New York City.

The goal was to carry the Stars and Stripes from the Pentagon to the World Trade Center. The run began on Friday September 28th and continued overnight until they arrived about 1800 UTC Saturday. Their route was tracked using the Global Positioning System capability of the United States Naval Academy’s Ham Radio club. Computer generated maps were able to show live the progress of the runners along the way. (VHF Reflector)

**

ATTACK ON AMERICA: MOROCCO CQWW CONTEST STATION CANCELS

The September 11th terrorist attack is now having an effect in the world of ham radio contesting. This, as Al Crespo, NH7A, tells the Ohio Penn DX news that his CN2AC CQ World Wide SSB Contest operation from Morocco has been canceled. Al says that he will instead operate from Maui using his NH7A callsign. (OPDX)

**

HAM RADIO HELPING HAND: IHS NEEDS OPERATORS FOR HONDURAS

International Health Services says that it needs ham radio operators to accompany medical and dental teams to villages in Honduras. According to an Internet posting by John Kirckof, KB0UUP, most of these villages I-H-S visits have no electricity or phones. Kickof says that IHS is often are the only medical care these local people will ever see:

--
In-Q: Honduras is the...
Out-Q:...each mission in February.

--

Kirckof, who is the Communications Director for I-H-S says the group will provide High Frequency gear for any operator who does not have his or her own portable rig. Both men an women are welcome to apply. Sign-up is now until about mid October. For some basic information, visit www.ihsofmn.org or contact John by e-mail to jmkkek@runestone.net. (KB0UUP, ARNewsline(tm))

**

SURVEY: CELL PHONE CURBS FAVORED WHILE DRIVING

Three out of four adults in the United States favor laws to curb the use of cellular telephones while driving. This, according to a survey released by a highway safety group. And its a survey that has some ham radio operators concerned as well. Amateur Radio Newsline's Don Wilbanks, KC5MFA filed this report:

--

The poll of 1,001 adults was carried out July 1st to the 19th by the Louis Harris organization for Advocates for Highway and Auto Safety. This is a coalition of consumer, health, safety and insurance groups who say that they are working to make U.S. roads safer. The results are almost startling.

Though nearly two out of three people surveyed report owning a cellular phone, the poll found a lopsided 76 percent backed restricting their use by drivers in motion except in emergencies. In fact, the poll found that mobile cellular phone use in vehicles topped the list of concerns that people wanted addressed. Cell phone use was closely followed by drunk driving and improving safety at intersections.

This poll and others like it are of concern to radio amateurs and operators of other mobile two-way radio gear. Currently, no federal law bars the use of cell phones while driving but several states prohibit phones being held by hand while driving except in emergencies.
Two-way radio users fear that any across the board federal ban on using a cellular phone while driving might also be applied to other radio services as well.

Meantime, another report from the National Conference of State Legislatures says that laws suggesting bans on drivers using hand-held cell phones have now been proposed in 40 states. As previously reported, a measure in New York is recently won approval and at least a dozen municipalities have also established mobile cellular telephone bans.

For the Amateur Radio Newsline. I'm Don Wilbanks, KC5MFA, reporting from New Orleans.

--

The survey also says that all of these enacted and proposed laws appear to have widespread public support.   (From media releases and published news reports)

SERVICES TO HAM RADIO: LOGBOOK TO THE WORLD UPDATE

Project Manager Wayne Mills, N7NG, says that access to the ARRL's proposed Logbook to the World will be for everyone. Bill Pasternak, WA6ITF, reports:

--

In a note to Pete Smith, N4ZR, and posted to the VHF reflector, Wayne Mills says that the only charge will be for usage. Mills explains that there will be a charge when utilizing a QSO record for a specific award such as the DXCC, Islands On The Air, Worked All Zones and the like.

Mills says this means that users will only pay for what he calls usable "QSL's. You will not have to pay for attempts to get a QSL as you currently do when you send them via mail -- whether direct or via a bureau. Mills believes should result in a dramatic saving as compared to tradition methods of obtaining QSLs.

Mills also notes that five years is about as far back as Logbook of the World will probably ever go. Initially says Mills, it won't go back even that far. This he says will be an attempt to manage the initial data in-rush.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

In addition to his work on Logbook to the World, Wayne Mills, N7NG, is the Membership Services Manager for the American Radio Relay League. (VHF Reflector)

ARNEWSLINE FUND REPORT: THANKING OUR AUGUST SUPPORTERS

Ladies and gentlemen, with the August listener appreciation list, here is Amateur Radio Newsline support fund administrator Andy Jarema, N6TCQ.

--

In the month of August we heard from:

Mt. Beacon ARC of Wappingers Falls, NY; Benton Bonney of Orlando; Hiram's Hams Amateur Radio Society of Miami.

A BIG thank you to Roy Blanchard, N5YHS of New Orleans; Mike King, W5PY of Slidell, LA; Daryl Stout, N5VLZ of Little Rock, AR; Robert Guidas, KB4ABF of Maynardville, TN; Radio Amateur Club of Knoxville, TN; Richard Wolf, WI8X also of Knoxville.

Monthly contributor Frank Hemko of Harrods Creek KY; Robert Majkrzak, KA8WQL and Cheryl Turner, KB8YKA of Berea, OH and Wally Willhard, W7MVK of Bountiful, UT.

From California, William Walters of San Jose; Daniel Hart, KE6UHG from Bakersfield; Robert Vitzelio, W6AEJ of Downey; our friends at the Pasadena Radio Club, W6KA and our old friend and star of last month's QST Magazine, Dave Bell, W6AQ of Hollywood.

Andy Jarema, N6TCQ. Thank you for your support.

--

More with Andy and the support fund in future newscasts. (ARNewsline Support Fund)

**

INTERNATIONAL - GUATEMALA: A BIG UHF WIN FOR HAM RADIO

A big win for ham radio in Guatemala. The Club de Radioaficionados de Guatemala says that nations spectrum regulators are returning the 430 to 440 MHz band to Amateur Radio use.   Amateur Radio Newsline’s Bill Burnett, KT4SB, reports from Miami.

--

It was five years ago, back in 1996, when the Guatemalan government suddenly banned hams from access that spectrum. Guatemala then auctioned those frequencies to commercial operations.

But reports out of Guatemala soon said that the reallocation was not working they way the government had envisioned. No reasons were given. Now comes word through AMSAT that these new users will be moved elsewhere and the 430 to 440 MHz band will be returned to its former use in Amateur Radio operations.

And in the hope of preventing this kind of an arbitrary reallocation from ever taking place again, the Guatemalan national Amateur Radio society says that it will ask the International Telecommunications Union to add a footnote to its table of allocations at the World Radiocommunication Conference 2003. One that will give the Amateur Radio service primary status from 430 to 440 MHz in that country.

From Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The Club de Radioaficionados de Guatemala had petitioned the Guatemalan government to reverse its decision removing ham radio operations from the 70 centimeter band. (ARRL, AMSAT, Q-News, CRG, others)

**

INTERNATIONAL: BIG VK SITE FEES WIN

Hams down-under in V-K land are also celebrating after surviving a threat.

This, to their use of several key repeater sites. Q-News Graham Kemp, VK4BB, has the details from Melbourne Australia:

--

Rob VK2MT reports on APC News that local clubs were faced with annual site bills of up to $3000. A lot of “e” and snail-mail correspondence was generated plus a couple of visits to Members of Parliament, both at the State & Federal level. What became obvious after about a month, was that the "softly-softly" approach -- while still holding a big stick -- was perhaps the way to go.

Well, just over 3 months later and the dust has settled. Illawarra have been officially informed that there will be a maximum figure of $300.00 attached to each existing Amateur Club that has equipment at a TransGrid site. Also, they won't be charged per antenna -- as was going to be the case, all existing and documented by TransGrid antennas will be part of the deal.

For Q-News Australia, Im Graham Kemp, VKBB, reporting for the Amateur Radio Newsline.

--

Clubs will have to satisfy several provisos, such as insurance, priority of commercial users and the like. Overall though it is a satisfactory outcome for amateurs and clubs, who could have faced fees ten times as much. (Q-News)

**

INTERNATIONAL - JAPAN: WRTC-2002 AT HAM FAIR 2001

According to a recent WRTC press release, Yaesu will be the principle radio equipment supplier for WRTC 2002. This as WRTC representatives Martti Lane, OH2BH and Dennis Motschenbacher, K7BV sign a major sponsoring agreement with Jun Hasegawa, president of Vertex Standard Co.Ltd. Vertex Standard manufactures the Yaesu line of ham radio gear.

Lane and Motschenbacher signed the agreement while in Japan to represent WRTC 2002 at the recent "Ham Fair" in Yokohama. While at Ham Fair they invited Tack Kumagai, JE1CKA to act as the WRTC 2002 representative in Japan. Kumagai has accepted the post. (WRTC-2002 Press Release)

**

DX

In DX, yet another successful super low frequency report across the Pacific. Jeramy Boot, G4NJH, has more:

--

Low frequency signals have crossed the Pacific for the second time. During the Autumn equinox on the 21st of September, a number of New Zealand and Australian stations sent extremely slow Morse on their 165 to 190kHz LF band. Part of the signal from ZL6QH was received by VE7SL in south-west Canada just before his dawn, fading out some three minutes after sunrise. The path length is estimated to be 11,709 kilometres.

Radiated power was estimated to be 5 watts and the antenna was a long wire at the Quartz Hill club station, which is run by the Wellington Amateur Radio Club. Reception of a complete callsign is the next challenge. The short duration of the opening means that a faster mode must be used, but this is likely to worsen an already marginal signal to noise ratio. Permission is also being sought for ZL6QH to operate in the 136kHz band
--

Because of the extremely slow speed of the contact there is no audio to share with you. In fact, reception requires a computer and a special decoding program. Our thanks to Bob Vernall, ZL2CA, for much of the information on this historic radio event. (ZL2CA, RSGB)

**

THE FINAL ITEM: BANDPLANS ARE IMPORTANT TO THE FCC - PART 2

And finally this week, we take another look at the FCC's position on voluntary bandplans in the Amateur Radio service. According to the Special Counsel for Amateur Radio Riley Hollingsworth there are two kinds of problems the FCC sees. The first is the operator who simply does not know that a specific bandplan exists:

--

“Now, in the first case, not knowing about the bandplan. Thats more understandable than you might think at first. Unless an oprator really keeps up with Amateur publications including League publications, they wont know about the bandplans.”

“Now, a lot of operators have a list of frequencies on which they are authorized to operate and they keep it right at the operating desk. I'd recommend having a second sheet with that frequency list that describes the bandplan for each band. In some ways the bandplans are more complex than the frequency list, but in fact they don't really inconvenience anyone and they really do enhance Amateur Radio and make it a lot more interesting -- and make it possible to do a lot more experimenting.”

--

But what about that small but vocal group of hams who simply refuse to abide by bandplans by claiming its their right not to. For these people, Hollingsworth has some words as well:

--

“That attitude is very destructive, and they just can't stand it that there just might be an area where they just should not go because of a bandplan.”

“Now, they do not stop to think that QRP or PSK-31 could not exist without bandplans. The fact that they have about 3,850 other desecrate frequencies, and don’t have to bother the folks in the bandplan set-aside segments -- for example on 160 meters in the CW bandplan recommended segment -- that never occurs to them.”

“And of coarse if they were adhering to a bandplan and someone bothered them, they would be the first to knock on the FCC’s door.”

--

As Hollingsworth stated last week, these are hams who are totally focused on rights and could care less about responsibilities. They do not care about the damage that they do to Amateur Radio and do not have a clue as to how much pressure is on our frequencies from entities that would like to see them taken away.   (RAIN)

Hello All There,
                  I have an Icom IC-28 (25 watt output).But with no
Duplex Function.Also the Duplex Button on the Front Panel is not
there.Anybody / Any Idea How the Duplex mode can be fixed?. Or a copy
of the Ciruit/Manual will be of help.

     Many Thanx in Advance.

Hi there everybody. Well, I've been taking a course to get my ham radio licence and am about to pass the exam in a couple of weeks (I hope!). I don't have much cash (starving student), so I'm starting off small. I was able to buy a 2-meter radio from an acquaintance for a good price, but it's a mobile unit. I want to use it in my apartment. I have a couple of questions and I'm hoping you guys can help me answer them...

I need an antenna. The radio is a Radio Shack HTX-242. The book doesn't really say much about the best antenna to use. What can I buy or make fairly inexpensively? Does it need to be very long? Can it basically be a wire hung out the window? I live on the seventh floor of an apartment building in a fairly quiet city here in Ontario. If I put the antenna out the window, will this be ok to catch the local repeaters? I'm just curious because there's a couple of other apartment buildings around me that are a bit taller and I'm wondering if all the concrete will impede my ability to receive signals.

Anyway, sorry these are kind of basic questions but I'm looking forward to any replies. Thanks in advance!

Nick

If anyone has information on this transceiver, I would appreciate hearing from you. I have this unit and am having difficulties getting full powere output, even into a dummy load. It only has about 25 watts output. Any suggestions? I do not have a manual for it so cannot do any sensible troubleshooting.

The Courier and Thunderbolt amplifiers were made by E.F.Johnson before 11 meters was given to CB. I had a Courier for a while.

They are tube amplifiers intended for Class C (I think, maybe Class B) operation. As I recall, the Courier could run a few hundred Watts input; the Thunderbolt somewhat more, both well within legal limits. They covered 10 through 80 meters.

Today their best use would be to raise the output of a small CW rig to a serious level.

I believe they date to around 1960.

73, Bob K6DDX

While the Thunderbolt could be confused with the Johnson Thunderbolt, I
doubt this one is the Johnson one. YOu did not give enough details for
it. If is the Johnson one, then look here.

http://bama.sbc.edu/

Johnson also made a Courier modle but it is not a moble unit.

The Courier Mobile sounds like the one made for the business band around
30 mhz and was used by many CB operators. Courier was a big name in the
comercial (well not really that big) and a bigger name in the CB market
in the mid 1960s.
 Should putout about 50 to 60 watts when driven by about 4 watts. Think
it has a black front with a light that comes on when it is transmitting
but not sure.

Good luck in taking your exam. I've been a ham over 30 years now and
really enjoy the hobby.

The building may affect your signal into some local repeaters but
there are quite a few repeaters in most cities. A simple antenna can
be made using a coat hanger or two. E-mail me personally and I will
send you some simple drawings & diagrams.

A tremendous resource for all things ham radio is

http://www.ac6v.com

There you will find more information than you'll be able to digest.
Also look to the ARRL (http://www.arrl.org) for even more info.

I am a relatively new ham and have some equipment I may want to sell or trade.
I have seen numerous messages for people wanting to buy/sell/trade equipment.
Will someone please give a general overview of this.
What to watch out for, dos and don'ts, etc.

Thanks in advance.

That's true - if you can understand Russian click on 'view' 'character set'
and then 'cyrillic' and you will be able to read it.

```

>What to watch out for, dos and don'ts, etc.

I personally like Ebay (ebay.com), although a lot of people don't. If you choose to sell on the newsgroups, be sure to post to appropriate newsgroups, don't just spam all the amateur ones. Clearly describe your item and if possible, post pictures.

When buying, make sure the person you're dealing with seems legit. A good thing to do is to check out his/her ham license online. This isn't always fool proof and not all hams are honest, but it's another good measure. If the person is vague about the condition of an item, be weary and try to get a picture of the item also.

When buying, a good place to check the value of an item is by visiting the Ham Radio Boneyard website at http://www.geocities.com/CapeCanaveral/Hall/8701/ham/boneyard.htm. This guy has posted a lot of items with the prices he's seen things go for from a variety of sources and it seems to work pretty well.

If you have any other questions, feel free to email me!

Hi,

Looking for a manual or a good clean copy of the operating and/or
service manual for the Yaesu FT-980.

Thanks in advance es 73,

Doug W3IIY

Does anybody happen to know a site where I can research the serial numbers
for a specific radio? I would be looking at gaining manufacturing data
relating
to the date the radio was built, lot number... etc.

Particularly interested in the Yaesu FT-920 .. Serial #1C4400xx

Thank you for reading this post.

Does anyone have information yet on how to do the Mars mod to the new
Kenwood tribander? I know someone who bought one and the supplier did
the mod for him. They told him that they got the info direct from
Kenwood. They said it involved removing a diode and a jumper.
  The problem is he has no idea HOW they did the mod. Has anyone
gotten gotten hold of a diagram or specific instructions (step by
step) on how to perform this mod?? I want to perform it BEFORE I start
loading the radio full of frequencies, because I know that I will
loose all data stored in memory when I reset the CPU after doing the
mod. Any help would be much appreciated.

  Thanks,.....Dan N2PZ

Hi there. I'm using a mobile rig as a base station. I need to convert AC to 13.8VDC. My question is, would it be ok to use a 12V power supply? The specs in the radio's manual say supply voltage to be 12V(+/-15%) so I'm assuming this is ok but I want to make sure before I go out and buy one. Also, anything else to look out for, or can I just get a fairly inexpensive one (as long as it runs at the correct amps)?

Thanks in advance!

Julia

by the way, I'm new at this whole ham thing... :)

Your radio runs at a 12v nominal, which is anything from 11v on up to 14.5v. Most cars run at least 14v on the battery when charging. Best to have a power supply that delivers 13.8 to 14.0 vDC under load.   Many regulated power supplies have an internal adjustment to correct for this. Lower voltages (<12v) can affect the RF power output.

Watch out for unregulated power supplies; these can have voltages in excess of 16v with a light load, and can fry some IC's. Just look for a heatsink of some sort with what looks like a transistor attached.

Radio Shack has a pretty good switching power supply for $119.99 (P/N
22-510).  It is 13.8VDC and rated at 25 amps continuous.  By comparison, an
Astron PS-35A, which is also rated at 25 amps, is $149.99.  I've been using
one for several months continuous and its working just fine.  25 amps will
give you some cushion, and you can run some other items also if you want.

Has anybody had any success with magnetic loop antennas? I'm considering geting one and either getting it just above the roofline on the second floor or in the attic. This is one of my only choices for an antenna as I have little space to put an antenna on my lot and some cc&r's that I may not be able to avoid although my neighbors don't seem to be respecting them).

Thanks and 73!

I would suggest you try antennas like a Screwdriver or Texas bugcatcher.
These are fare more efficient and almost unobtrusive.  If you have a metal
clad building they seem to work far better than most magnetic loops. There
is a a excellent Application Note on magnetic loops on Elecrafts web page.
www.elecraft.com
You can also check www.ac6v.com
 under antenna projects for more links and software for magnetic loop
design.

12 volts would be acceptable. You'll have slightly reduced output power, but not significantly reduced. Ensure that you are supplying enough amperage to run the radio. A 50 watt radio will consume quite a bit of power, depending on the efficiency of the radio. Example, my 45 watt TR-7950 draws 9.5 amps through 13.8 volts on high power. Do the math, in order to produce 45 watts of transmitter output, the unit requires 131 watts from the power supply. Be prepared to spend up to $100 for a 10 amp power supply.

Where are you buying your equipment? $100.00 for a 10 amp supply?

maybe $100.00 for a 25 to 35 amp supply yes but 10 amp supplies are about 30 to 50 dollars for one.

Hi Mike Yaesu uses a specific form in serial numbers

 "YMLLNNNN"
where  Y = year
              M= month where "C" starts out January  D= February  etc
           LL = lot number from beginning of production
   NNNN= radio produced within that lot.

so the radio you are talking about is the  00XX radio produced in lot 44
built in January 2001 don't think they had the 920 in 1991!  Hope that clears
it up for you.  73 Bob N4BK

Hard to get a poor power supply,I have a 12 amp Kenwood if you like.When a
supply says "12V" it usually is 13.8 and most supplies have an adjustment
inside to make a slight adjustment.TG

The usual "12 v power supplies" usually supply about 13+ volts, unless
otherwise specified. My solution, made for other reasons, was to use a
semi-retired automobile battery to which I connected a trickle charger.
I kept the battery in a large plastic tub to eliminate rug destruction.
Now that the battery has died for good, I'm back to the Astron 35M.
That's life, I guess.

If you will be running your rig and transmitting it while it is hooked up
to the power supply, make sure it has enough AMPS to support the
transmission of the radio - otherwise your radio will power off every
time you key.

I would like to buy a multiband CW QRP rig. Homebrew,Project, Not working
ok.Condition is not important it is to use not look at.Price is a
consideration due to fixed income.
Prefer something not with tiny parts(surface mount/chip components).Due to
neuro-muscular disease I am unable to solder close connections.
THANKS,
KC0EH

Once I started thinking about this, it had me completely stumped: When designing class-A small signal amplifiers with S-parameters, a *simultaneous* conjugate match must be performed at the transistor's input and output -- or else the finite, non-zero value of S12 will affect the impedance match of the transistor (reflected impedance at one port will mess up the amplifier's impedance at the other port). That's why matching must be "simultaneous". But when designing class-C power amplifiers, we use fixed values of large signal impedances (as given in the transistor's data sheet), with no apparent thought at all given to the reflected impedances -- which I would think could get quite large. In other words, why do small signal transistors require a simultaneous match, while we just take the values of the complex impedances as given on the power amplifier's data sheet; with no thought to the reflected impedances disturbing the match at the opposite port of the transistor???

Thanks for any help!

Mike

Well, if you are trying to pull more amps than the PS is capable of putting out, then yeah, they don't last long at all. Most mobile rigs draw 10-15 amps on transmit. But I've used the 3 amp regulated PS to run a HTX-202 for over two years now, 24/7, and not had a problem with it, and it wasn't new to begin with. And I've used the new switching PS for several months now, 24/7, running either an Alinco DR-610TQ dual band mobile or a 60watt 2m amp for my APRS rig with nary a problem. You just have to match the PS to the equipment. The only 3 amp PS I've seen blown was when a guy tried to use one as a battery charger for his truck. He might have got by with it except he tried to crank the engine while the PS was still hooked to the battery. Not a pretty picture!

AMATEUR RADIO NEWSLINE(tm) REPORT #1261 - OCT. 12, 2001

Amateur Radio Newsline report number 1261 with a release date of Friday,
October 12th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says “yes” to S-D-R. This story is
first on Amateur Radio Newsline report number 1261 coming your way right now.

**

EMERGING TECHNOLOGY: FCC APPROVES SDR

The FCC has taken the first steps in making Software Defined Radio or S-D-R a household word. This, as the regulatory agency adopts rules changes to authorize and begin deployment for a new generation of two way radio gear. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--

The Action took place on Friday September 14th at an open meeting in Washington D-C but the announcement was all but lost in the events occurring in New York City and the Pentagon only three days earlier. But what’s important is that this First Report and Order removes many barriers to entry of Software Defined Radio enabled products to the marketplace. And the new rules do allow manufacturers and operators of such devices to reconfigure them after they have been deployed in the field -- including -- possibly -- ham radio gear. This, says the FCC. will speed up the introduction of advanced technology and new services.

The new rules say that software modifications to an S-D-R can be made through what the FCC calls permissive change. The FCC describes this as a totally new form of filing process where the FCC identification number will not have to be changed nor will the equipment have to be relabeled each time its purpose is revised. In fact, the FCC says that it will permit use of an optional electronic label for S-D-R gear in which the FCC identification number could be displayed using a liquid crystal or similar screen. This will allow another party to obtain an equipment approval in its name and take over responsibility for compliance with operating rules that were the domain of the previous licensee.

The Commission has also adopted requirements saying that the license grant holder must take adequate steps to prevent the unauthorized software modification to S-D-R gear. But so far it has not set up any specific security requirements.

In Los Angeles, I’m Bruce Tennant, K6PZW, for the Amateur Radio Newsline.

--

More information on Software Defined Radio is on the web at several locations. The subscription S-D-R forum is the best. Its in cyberspace at www. sdrforum.org   (W5YI Report, SDR Website, ARNewsline(tm))

AMERICA UNDER ATTACK: SATERN SAYS HAM HELP STILL NEEDED IN NYC

The last federal rescue crew left the World Trade Center disaster scene on Saturday, October 6th leaving New York officials to continue the nearly month-old effort to locate nearly 5,000 bodies buried in the rubble. The Urban Search and Rescue Task Force was the last of 20 Federal Emergency Management Agency teams sent in after the September 11 terrorist attacks that collapsed the twin towers, but their departure does not mean work is winding down. In fact, one volunteer agency says that ham radio operators will still be needed there for some time. Amateur Radio Newsline’s Henry Feinberg reports from near the scene.

--

Its the Salvation Army that needs radio operators to support the organization's World Trade Center relief operation in New York City. And even though it has cut one shift of radio operators the relief agency says that it still needs fresh Amateur Radio ham operators on a daily basis until further notice.

In a statement to the ARRL Letter, Jeff Schneller, N2HPO who is coordinating the Salvation Army Team Emergency Response or SATERN Network says that he is still short of people. Schneller says that the midnight to 8 AM shift has been suspended but they still needs six Amateur Radio operators per shift -- a total of 12 per day -- for the indefinite future.

SATERN needs these operators with their own base station radio gear at the Kennedy Airport warehouse set up from about 8 AM until about 9 PM -- possibly broken into shifts. SATERN also needs operators to ride with trucks to provide communication. If you can help, please visit http://www.satern.org for the latest information.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ, 15 miles from ‘ground zero’ in West Orange New Jersey.

--

The Salvation Army said it's sending additional personnel from the Midwest to New York City to assist those who have been on duty since September 11th. In the area of ham radio, so far some 40 Amateur Radio operators have turned out to help support the Salvation Army relief effort with some coming from as far away as Missouri, North Carolina, Georgia and Florida. (ARRL, SATERN, published news reports)

**

AMERICA UNDER ATTACK: TERRORISM ATTACK CUES EAS DEBATE

When should the nations Emergency Alert System or E-A-S be activated? According to the trade publication Radio World, experts are debating that question because the E-A-S was not used following the September 11th terrorist attacks on New York’s World Trade Center and the Pentagon.

Richard Rudman, W6TIA, is the chairman of the Emergency Alert System National Advisory Committee. He also chairs the Los Angeles County local E-A-S group. Rudman says that since the incidents that the national committee has recommended to the FCC that changes be made if a similar attack takes place again.

--

Richard Rudman W6TIA: “The Emergency Alert System -- at the local level --

ties into local emergency management. What I am suggesting is that we have to look at the elements of the critical infrastructure that might possibly have warnings based on the current threat and make sure that they are tired into local emergency management properly so that a decision can be made to issue an E-A-S warning if it is appropriate."

--

The question of whether an E-A-S civil warning should have been triggered has stirred strong debate among those subscribed to an on-line discussion remailer. Rudman says that the job of the E-A-S is to alert the public before an actual event occurs, rather than after the fact. He says that with the immediate live media coverage of the strikes on the two locations that the need for an E-A-S warning was lessened.

--

Richard Rudman W6TIA: "First of all, there wasn't enough information to give a clear warning of what was going on. You might as well have just put out an E-A-S message with one word -- 'panic.'"

"At the time that you get a warning you really have to have other information. I often say that our job -- quite often -- is to take people from the fear of the unknown to fear of the known. If you don't do that right, all you are doing is confusing people and possibly instilling panic."

--

Not everyone agrees. Radio World reports some speculation that there was enough time between the two plane crashes in New York that issuing an E-A-S alert might have saved additional lives.

The E-A-S was developed in 1994 to replace the then aging Emergency Broadcast System as a tool for the President of the United States and others to warn the public about emergency situations. But President George W. Bush chose instead to go directly to the mass media and did not issue an Emergency Alert Notification on the day of the terrorist attacks. As a result, E-A-S played no role in alerting the public to the emergency situations. (Radio World)

**

AMERICA UNDER ATTACK: REPEAL THE ECPA SO AMATEURS CAN MONITOR FOR TERRORISTS

A Michigan ham says its time for congress to repeal the Electronic Communications Privacy Act and lest SWL's monitor the cellular frequencies foe terrorist activities. Lloyd Ellsworth, NE8I, is circulating a letter to congress on the VHF Reflector that says the events of September 11th warrant giving the public the ability to again monitor cellular communications and report possible threats to the nations security onto authorities.

--

Lloyd Ellsworth NE8I: “If you have an area [of spectrum] -- for example 800 to 900 MHz -- where cellphones operate -- a terrorist could also conveniently operate there and not easily be caught. You would have someone specialized who had that [monitoring] equipment to receive him.”

--

As Ellsworth’s letter notes, the Electronic Communications Privacy Act forbids Americans from using a radio scanner receiver other device from eavesdropping cell phone and certain other radio communications. It also forbids the importation or sale in the country of equipment capable of interception of these signals. But says Ellsworth, these are tools and skills which any knowledgeable terrorist can easily use against America and Americans. And we all know that terrorists don’t play by the rules.

--

Lloyd Ellsworth NE8I: “What I am concerned with is if a terrorist is able to freely operate and stands a very small chance of being caught while conducting some communications in that band -- they will.”

--

Ellsworth says that repealing the E-C-P-A will even the playing field by giving law abiding Americans a way to listen for suspicious cellular phone calls or other radio signals that can be reported directly to an appropriate agency. Ellsworth notes that this would allow the average citizen, including police and law enforcement to directly to contribute fighting terrorism. Ellsworth adds that this would also put any terrorist on notice that any radio communications he or she may use is likely to be detected, intercepted and used against them. (ARNewsline(tm))

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Radio Club of El Cajon serving El Cajon California.

(5 sec pause here)

**

ENFORCEMENT: WARNING TO FISHERMEN GETS THEM OFF TWO METERS

It appears as if a warning letter was enough to get at least four ham fishing enthusiasts off of the two meter band. This, according to FCC Special Counsel Riley Hollingsworth who says that he has spoken with some of them and those operators are gone:

--

Riley Hollingsworth: “We had warned eight commercial fisherman in Alaska about operating on two meters without a license on the fishing vessel Evack and the fishing vessel Phoenix. Now four of these fishermen have called us or been in touch with us and apparently in addition to Marine equipment they were using amateur 2 meter handie-talkies. They have assured us that they have stopped using the [Amateur] equipment and our independent information indicates that too.”.

--

Hollingsworth says that his office is still waiting to hear from the other remaining radio users. (FCC, RAIN)

**

ENFORCEMENT: DON’T USE HAM GEAR WHILE HUNTING IF YOU ARE NOT A HAM

Fishing vessels are not the only unlicensed users showing up on the ham bands. In many areas it hunting season, and some of those on the prowl using amateur radio are not hams. The FCC’s Hollingsworth says that the agency has now warned four hunters in West Virginia about using unlicensed amateur gear while out hunting. (FCC, RAIN)

**

ENFORCEMENT: VK JAMMER FINED $3000 (AU)

The United States is not the only place bringing radio regulatory violators to justice. Q- News reports that the Australian Communications Authority has successfully prosecuted a man who cost a courier company an estimated $80,000 when he interfered with its two-way radio system.

In an all to familiar scenario here in the United States, the man who is an ex-employee of the company, played music over the two-way channel when the company was trying to pass on information to its drivers. Prosecution came after a long investigation by the Australian Communications Authority which direction finding equipment to track down the offender. He was fined $3000 after pleading guilty in Sydney's Downing Center Local Court to three charges of operating a radio transmitter without a license.

The Australian Communications Authority New South Wales Compliance Team Manager is Tony George. He says that the A-C-A works hard to detect unauthorized operation of radio transmitters. George added that the agency will act quickly to prosecute offenders. (Q-News, ACA)

**

RESCUE RADIO: HAMS CALLED OUT AFTER TEXAS BRIDGE COLLAPSE

Ham radio was called out after disaster struck in South Texas early on the morning of September 15th. This, after a 240-foot section of the Queen Isabella Causeway between South Padre Island and Port Isabel, Texas, collapsed after barges slammed into the bridge supports.

The mishap sent several vehicles plummeting into the water 80 feet below and claimed 11 lives. The Texas Department of Public Safety contacted John Teer, AK5Z, to request Amateur Radio assistance with communications, because all phone lines between South Padre Island and the mainland had been severed.

The ARRL Letter reports that Teer was able to get volunteers to place at the both the South Padre Island and the Port Isabell Emergency Operations Centers. The Department of Public Safety provided boat transportation to the Island for one operator. The hams then provided 2-meter communication for government and Red Cross officials on for two days until landline telephone and cellular service could be restored. Volunteering their services along with Teer were Pat Patterson, N5SLI, Virginia Scarth, KC5SAM, Ed Scarth, W8AHU, and Gregg Sargent, KAZ0ARS. (ARRL)

**

EMERGENCY COMMS: CELL PHONE LOCATOR DELAYED TO DEC 2005

People waiting for the cellular telephone industry to institute automatic emergency locating technology will have to wait some more. This, after the FCC gives some of the nation's largest mobile phone carriers more time to develop technology that allows emergency personnel to quickly locate callers who dial 911 from wireless phones.

ATT Wireleess, Cingular, Nextel, Sprint and Verizon had sought implementation schedule delays based on problems in obtaining the needed equipment from suppliers. The Federal Communications Commission mandated back in 1996 that all cellular phone companies have some location equipment in place and operational by 2002. Its now been pushed back to December 31st 2005. A similar delay was granted to VoiceStream last year. (Published news reports)

**

RADIO RULES: ANOTHER MASS CORES CONVERSION COMING

The ARRL Letter says that before the switchover to the new and mandatory Commission Registration System on December 3rd, the FCC plans to do a mass conversion from its current Universal Licensing System database.

The FCC established the Commission Registration System or CORES last year and has been in the process of implementing it. Once it becomes mandatory, everyone doing business with the FCC -- licensed or not -- must obtain and use a 10-digit F-C-C Registration Number -- or F-R-N.

The FCC calls the move is a first step toward streamlining fee collection and tracking. Many amateurs registered with the current Universal Licensing System were assigned an F-R-N by CORES in a mass conversion last year. Those who got one were notified by mail. (ARRL, FCC)

**

CONVENTIONS: DARA SAYS PLAN EARLY FOR HAMVENTION 2001

The Dayton Amateur Radio Association says that you should plan now to attend the 51st annual Dayton Hamvention. We have this report on the very special reasons why.

--

Dayton Hamvention 2002 is slated for next May 17 to the 19th. And in keeping with President Bush’s call for America to return to business as usual, the planners of the world's largest amateur radio gathering and trade show have sent out an early flyer. A flyer that tells everyone that the show will go on and that it will be bigger and better than ever before.

How do you make the best even better? How about the Hamvention’s new “All You Can Ride Option” advance purchase package. For a $3 additional fee over the price of a normal $17 advance purchase ticket price, show attendees can ride to and from the HARA Arena an unlimited number of times. If you wait till you get to Dayton it will cost you $22 not including bus service. Buying last minute bus rides will cost another $2 a day or $5 for the weekend. So the $3 in advance is quite a deal.

But that’s not all. If you post mark your ticket order before November 10th, you will also receive a limited edition Hamvention 2002 souvenir program. These normally sell an additional $5 at the door. And early reservations also get entered into the new Hamvention Gift Certificate Contest. Here, two ticket holders will be randomly picked to receive a $250 gift certificate redeemable for cash at Hamvention 2002.

For more information write to the Dayton Hamvention, Post Office Box 964, Dayton Ohio 45401. Or you can visit the Hamvention website at www.hamvention.org.

For the Amateur Radio Newsline, I’m Rick Johnson, KA9VZD.

--

Amateur Radio Newsline is already at work planning the Ham Radio Town Meeting for Hamvention 2002. Details on this in an upcoming newscast. (DARA)

**

CONVENTIONS: ELECTRONIC EQUIPMENT EXPO

Don't forget about the annual Electronic Equipment Expo, which has moved to Seattle from Bellevue this year. The dates are October 24th & 25th at the Stadium Exhibition Center in Seattle Washington and admission is free. The event is co-sponsored by Society of Broadcast Engineers Chapter 16. More information and online registration is at www.emexpo.org.   (Portland SBE Newsletter)

**

HAM RADIO BUSNESS: THE HAM RADIO MARKETPLACE.COM

The Ham Radio Market located at is an Internet web board focused on radio equipment and "Ham Radio Stuff". According to President and Founder Bob

Hutchinson, N5CNN, it is operated as a public service for the ham radio community by the Wireless Industry Association which does not itself buy or sell anything. For more information visit http://hamradiomarket.com on the word wide web. (VHF Reflector)

ARNEWSLINE(tm) SUPPORT FUND UPDATE: ARNEWSLINE(tm) IS NOW A 501(C)(3) NOT FOR PROFIT CORPORATION

Ladies and gentlemen, with a long awaited announcement, here is Amateur Radio Newsline Support Fund Administrator, Andy Jarema, N6TCQ:

--

Just about a month ago I recorded an announcement similar to this. It was to be aired on newscast number 1257 which went to air on September 14th. After the events of September 11th, I felt it was best to delay a few weeks. As this is good news, I really do not want to hold off any longer.

Over the past two years we have all been working to bring Amateur Radio Newsline out from its old Westlink Radio Network identity and into its own individuality. This meant several things including a subtle name change, branding of our new name and revamping our website. It also meant becoming a self sustaining not for profit corporation. I am delighted to report that last goal has now been achieved.

Earlier this year, Amateur Radio Newsline Inc. was granted status as a California non-profit corporation. Then, in late August the I-R-S granted our petition and the Amateur Radio Newsline, Inc. became a Federal 501 (c)(3) tax exempt not for profit corporation. Yes, that’s right, as of August 20th, Newsline, as the programming arm of the old Westlink Radio Network is officially gone and the Amateur Radio Newsline as an entity unto itself came into being.

All of this was made possible by a generous donation from a Newsline supporter and benefactor who we are not at liberty to name. But it was that person to whom we at the Amateur Radio Newsline owe a deep debt of gratitude. So we pause a moment and say thank you. Thank your for helping make a dream of almost a quarter of a century become a reality.

We also want to thank the wonderful folks at the Holmsburg Amateur Radio Club in Pennsylvania under whose not-for-profit charter we have operated since incorporating as the Westlink Amateur Radio Network in the 1980’s. They are the people who said to us -- here is a place to start. They have been an ardent supporter of what we do almost since we began our newscasts in the 1970’s. We will always consider them as being an important part of the Amateur Radio Newsline family.

Our final note this week. Just a reminder that the address for the Amateur Radio Newsline Support Fund still is PO Box 660937, Arcadia, CA 91066. If you missed it, don’t worry. It will be given again at the end of this week's newscast. For the Amateur Radio Newsline Support Fund report, I’m Andy Jarema, N6TCQ.

--

On behalf of everyone involved in the Amateur Radio Newsline, a big thank you to Andy and to our secret contributor for making it all happen.
(ARNewsline(tm) Support Fund)

**

T-HUNTING: THE OWLS ARE BACK

Its fall and that means its migration time for numerous species. That includes that ever elusive Burrowing Owls. Here’s Joe Moell, K0OV, with the latest.

--

The fall 2001 migration period for Burrowing owls is beginning right now. Once again, Amateur Radio operators and VHF monitoring enthusiasts are being asked to help researchers study the patterns of this diminishing species. In addition to owls from the plains of Saskatchewan and Alberta, which hams have listened for since 1998, we're now being asked to monitor for 30 owls that were tagged near Moses Lake in eastern Washington state. Vicki Garcia of the University of Arizona wants our help, because it is uncertain if these birds spend the winter in California, or Baja California, or they go eastward to Nevada, Arizona, New Mexico or even to Texas.

The Canadian owl tags are in the 172 MHz range, while the Washington owl tags are near 150 MHz. If you live in a central state from North Dakota to Texas, or in any state to the west of that line, and you have sensitive monitoring equipment for these frequencies, your help is needed. For all the frequencies and monitoring information, go to my Web site, www.homingin.com. HomingIn is one word.

If you aren't on the Web, send e-mail to owls@homingin.com or postal mail to my callbook address. Again, that website is www.homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

If you missed any of that, simply take your web browser to www.homingin.com.

NAMES IN THE NEWS: AMSAT-NA ANNOUNCES BOD ELECTION RESULTS

Some names in the news. This as AMSAT North America announces the results of its recent Board of Directors election.   Barry Baines, WD4ASW, Dick Daniels, W4PUJ, Robin Haighton, VE3FRH, and Bill Tynan, W3XO, will retain their seats on the Board for the next two years. Bruce Paige, KK5DO is the first alternate and Dick Hambly, W2GPS is the second alternate. Paige and Hambly will serve until the next election. (ARRL, AMSAT-NA, others)

**

NET OPERATIONS: NEW NORTH TEXAS 222 MHZ NET

Dave Duval, K5UGM, in Dallas says that local hams are trying to start a new North Texas 222 MHz Net. They are also looking for station to check-in. The net operates on 222.105 MHz on Friday nights at 8 Central Time. If you think you can make the path, Bill says that the net will be listening for you. (VHF Reflector)

**

DX

In D-X, word that the same crew that aired 5U2K, 5U3T and 5U5A in March of 2001 will go back to Niger in January and February of 2002. This for a 2 week DXpedition with a larger crew that will include 3 to 4 new operators from Italy and the United States. At least 3 stations will be put on air with special attention paid to 80 and 160 meters. Overall operations will take place on 160 through 10 meters on CW, SSB, RTTY, PSK 31. Another station on 6 meters will operate CW and SSB. Callsigns will be announced at a later date.

Also, the electronic logbook is now on-line for the August 3rd tro the 5th K3L and National Lighthouse Weekend operation from Annapolis, Maryland. Stations who worked the AM Expedition to Thomas Point Lighthouse in the Chesapeake Bay can now check whether they made it to the official logbook. A photographic QSL certificate will soon be available. The QSL manager and other details are now posted at www.amfone.net/K3L. (Various DX sources)

**

THAT FINAL ITEM: HAM RADIO VS. A RUNAWAY BLIMP

And finally this week, what do you do if a blimp gets away? The answer. Call out ham radio. Amateur Radio Newsline's David Black, KB4KCH has the high flying details.

--

For members of the North Central Missouri Skywarn team…weather spotting means being on the lookout for hail, wall clouds and other severe weather…but the night of September 7th brought a situation they won't forget anytime soon. Severe thunderstorms were moving through the Kansas City area that evening, keeping amateur radio Skywarn groups busy, assisting the National Weather Service. In the town of Trenton, Glenn Briggs, KB0RPJ, was serving as Net Control for his spotters when heard a request he didn't believe at first.

--
IN We were discussing the squall line
OUT find it for them.
--

The blimp belonged to MetLife and had been parked at Kansas City's Airport. It was scheduled for aerial photography during the following day's Kansas City Chief's football game. But mother nature had other plans for this airship as Briggs found out.

--
IN The t' storms went thru and as it was moored at the downtown airport
OUT flying thru the air
--

For Briggs and his fellow hams, spotting suddenly brought forth a new challenge.

--
IN it was kind of interesting to try to look at the ..
OUT hit by a blimp
--

The blimp was in the air, flying out of control, for at least 45 minutes. The next task was to find it. Briggs says hams started a blimp watch.

--
IN We had begun sending hams out to try to track a NE trajectory
OUT land on a truck
--

A team of amateur radio spotters went to the scene and confirmed that blimp had been found. The crash site was a farm in the community of Chillicothe--that's about 85 miles northeast of the Kansas City airport. The blimp fell to earth after its self deflation system activated. No one was injured. Members of the Skywarn team assisted with notifying the FAA and other officials in Kansas City. For Glenn Briggs and his fellow North Central Missouri Skywarn team members, September 7th is a night to remember.

--
IN I would say it's the most unusual
OUT our spotters will remember for years to come
--

Future weather spotting nets will undoubtedly include the usual…hail, high winds, maybe even tornadoes. But at least one Skywarn team has the additional experience of blimp spotting.

From Birmingham, Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline(tm).

--

And what else is there to say? (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the W5YI Report and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline’s(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that Amateur Radio Newsline scripts are now available weekly on a self maintained list at Yahoogroups. To have a free text edition of this newscast delivered each week by e-mail go to www.yahoogroups.com, follow the directions and sign up for the ARNewsline list.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA in New Orleans saying “God Bless America,” 73, and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2001. All rights reserved.

For Sale: HF rig.   TS-440S, built in antenna tuner. I'm the original
owner, non-smoking. Rig was never mobile.   9+ appearance, operates
100%.
 Includes installed 500 cycle CW filter . Filter is fantastic when
operating PSK-31 or other digital modes.
 $400.00 plus shipping from Florida 34446
      Still have the original shipping box.
Contact: Joe,   K4LL@ARRL.NET,   (352)382-0809

Write me a note and I will e-mail a picture of it to you

P.S. I'm selling the above because I just received my brand-new rig with
all the bells and
whistles. I don't have room for the TS-440S in my shack, besides..........
I'm spending my retirement money on myself....... rather than letting it go
to my kids. They'd just party with the money !

Hi fellow Amateur Radio Ops
The Clear Lake ARC will hold HamFest 2001 on October 20th.
We have great door prizes (ICOM 706 MKII G, T81 quad band HT, and an Alinco power supply)
Entry is $3/person (kids 12 or younger free if accompanied with an adult)
Buy lots of tickets ($1=1 ticket, $5=6 tickets, $10=12 tickets, $20=25 tickets)
We have lots of vendors and ham sellers. In fact all tables are currently sold out.

www.clarc.org/hamfest.htm has maps, directions, prizes, and more

This Hamfest is all inside the Bay Area Community Center (NO OUTSIDE TAILGATING ALLOWED!)

See you THIS SATURDAY OCTOBER 20th, 2001

73 de KA5GLX

CLARC HamFest 2001 October 20th
www.clarc.org/hamfest.htm

For backwoods emergencies, what do you think is most likely to be useful?

A cell phone? There are towers but not everywhere, and 800 mhz and a forest canopy may not be as good as 27mhz.

A CB walkie-talkie? 5 watts may reach out, but would anybody be listening?

2m ham transeiver?

Oh a satellite phone? are these big and expensive?

Smoke signals?

I think in Canada CBs were the cell phone of the woods, they may still be, and of course in 5 or 10 years there will be cell towers everywhere.

The satellite phone is the best choice. They are not as big as they were a few years ago (no dish required), but they are still kind of expensive. But considering that no other form of comm is as reliable in remote locations, it's a bargain to someone suffering from an inflamed appendix (ask me how I know). The sat-phone is the only option that will work almost all the time and from almost anywhere on the globe, and will get you the contact you want in the shortest amount of time.

How 'backwoods'? Best bet is to check what is available (do rangers monitor CB?). Bear in mind that CB walkie talkies will NOT give you much distance. The antenna/ground system is EXCEEDINLY INEFFICIENT. Cell phones are not everywhere. As far as amateur - check where the repeaters are. My handheld with only a whip attached (yes, over 36 inches on 440 MHz) has reached repeaters in Buffalo, NY (60 miles away) and I've talked over a repeater over 100 miles away to the East; but this depends upon the repeater height and the fact that I can't be in a valley and reach them. In fact, to reach the furthest two repeaters, I've had to be on the 22nd floor of a high-rise on a hill. From flat ground, I can use the Auburn repeater (possibly 40 miles away). No problem with repeaters 30 miles away (and these get me into the telephone system) - but you'd have to check repeater locations. Same would apply to cell phones. They are not everywhere. Check the area out before you go in - that way you can select the best choice(s) available to you. Speaking of remote, from Antartica, they use direct satellite links for phones and internet; but these are NOT available 24 hours a day. For several hours, they have to depend upon HF amateur radio. That remains the only link that will work 24/7.

73 from Rochester, NY

Jim

I think cell towers will be obsolete in a few years and everybody will have
a telephone number nationwide and there will not be such a thing as a long
distance call. Satellites will control our phone system/s just like they
control GPS systems and Onstar.
My $.02 worth.

My options in order of preference (assuming of course you've made it to high ground if possible):

1. Cell phone. If you can hit a tower, you communicate directly with your emergency service provider, reducing any communication error and confusion caused by relaying information through third parties.

2. 2 meter HT. Excellent range under most conditions for handheld device. Carries for several (15 miles is NOT unusual) miles. Hams are GENERALLY service minded individuals, many are trained in handling emergency traffic. Try first to see if you can hit a repeater with autopatch (or an operator with phone patch capabilities) to put you in direct communication with rescue worker. Then try to hit ANY repeater, as a last resort, calling for MayDay assistance on prominent simplex frequencies, rotating between them and any repeaters (call MAYDAY, listen for a response, move on) you are able to hit. Many HT's scan the band, use this option to see if simplex frequencies or unknown repeaters are in use. Downside? With a band that covers several MHz there are roughly 800 frequencies to be searched.

3. Tough one... handheld CB or smoke signals... The smoke signals will probably be seen further away, but who'd be able to decipher them. Guess I'd have to opt for the CB, but don't expect more than about a mile range, under GOOD conditions.

As far as the satellite phone is concerned....   Bulky, but not overly so (about the same size as a large handheld radio). Expensive though, but I understand the price is coming down... Not sure about reliability, outside of my experience...

Regards!

Hi, name is Sam and I am having a strange problem with my Icom IC-726
rig. This problem just started happening and what it does is certain
areas on several bands will not TX. Just rec. and I have checked
several bands and it seems to be that way on all bands. I noticed that
just one digit up and it transmits but if I move the dial back one digit
the tx cuts out. Has anyone else had this symtom with these rigs?? I
forgot to check how wide the range is that this does not tx so I will
check this tonight. Thanks in advance and also where are the Icom nets
and what times so maybe I can check with those folks also. 73' DE

You may want to try a local ham club and talk with the hams there.
They may be able to assist you at a hamfest. Absolutly nothing wrong
with the net either. Do a www.google.com search on the sellers e-mail
address, you may see something you like or don't like about the guy.
Check his eBay account out if he has one and see what other folks have
to say about him. Buying and selling can be a lot of fun if you keep
your nose to the ground. You can get an opportunity to try many
different pieces of equipment out over the course. Good luck, JP

Hey there everyone! We're a live 24/7 internet station broadcasting off

a high bandwidth server. Everynight at 7pm (EST) we have live shows,
each with a BROAD range of topics!

Tonight, Tuesday October 16th is our best Talkshow - The Kris and
Craig show! 7pm - 10pm (or later)   We take live callers, ICQ or AIM
users so you can participate at ANYTIME!

Join in NOW! We offer all major formats for broadcasting!

Listen in today!

Hi
Take a look at the ARRL Wilderness Protocol.
It advocates monitoring 146.52 for five minutes every three hours beginning
at 7:00 am. There are other frequencies for 6m 440 220 and 1294.5.
It is printed in the Repeater directory and may be on their web site.
I do not know if it is in common use, maybe some hikers on the list could
give more info.

I would go with getting licensed and using Ham HT's...... 5 watts output on a HT with the rubber ducky replaced with more efficient antennas now sold for HT's will get you anywhere from 5-30 miles depending on conditions, terrain etc. I have worked simplex once on an HT almost 40 miles once. (surprised the hell out of me too!)

Depending on where you are, there "may" be repeaters within range also if help is needed.

B,

I'm a jeep owner for about 7 or eight years now and have played out all the scenarios you describe:) I wouldn't depend on cell phone now or in the future because the range really is very short. You just don't see all the cell towers since they're disguised often. I don't see cell one or sprint wireless maintaining a tower in the backwoods either. A CB probably won't give you that much range off your bumper even if someone were to listen. Nobody has ever (never) responded to my stranded pleas. Iridium, INMARSAT or some other satellite communication system would give good coverage for sure but I'm glad I was talking on someone else's budget even if I did have to hear, "Keep it short man. Just do it and get off." But, sure there are cheaper, more effective solutions.

A 2m radio will give you good coverage and there are folks who'll be on frequency at somewhat predictable times. A repeater at a distance will help out even more.

Then again, that time when I started a fire on federal property brought "rescue forces" faster than a .50 caliber sniper's bullet:)

Drink, WP3JQ

Last night on TV I saw a program from Australia. Talking about what to do if
you break down in the middle of nowhere, the need to stay with your vehicle, and
the like. It's a real problem in the outback areas of Australia, particularly

during the summer when the temperature approaches 130 or more Fahrenheit and there are areas where there isn't more than a vehicle or two every week. They mentioned the available of a FOR RENT (few dollars a week) satellite beacon transmitter that would broadcast through a satellite your position and need for help.

I assume that it is similar to the locator beacon that small aircraft carry.

I did not get the name of the device or details. (Yeah, reading the paper at the same time.) However what they showed was a fairly small and light device not much larger than an older HT. Perhaps it was to use vehicle power, I don't know. I didn't see any antenna involved.

I wonder if they're available in the Continental US???? In a REAL emergency it would be something that would be desirable to have.

Any pilots monitoring this who know about these devices?

Hi all!
I am curious about the possibility of building up a LORAN-type localization system on a small scale. This means that some transmitters ("beacons", located in well known positions) have to emit AM-modulated carriers where the modulating signals (on the different TXs) are in phase (or in a well defined phase relation). The receivers (situated on the object I want to localize, somewhere between the beacons) demodulate the incoming signals and find the phase relation between the modulating waves, so calculating the difference between the two distances from the beacons.

This is probably a difficult project for me, but I am anyway curious about it.

I have now two questions:

1) the 1st problem is to preserve a well defined (constant) phase shift between the modulating wave oscillators on the different TXs. Suppose that when 2 (beacon) TXs start (after some stabilization time) they have a phase shift PHI. I'd like to know for how much time it is probable that this phase shift remains constant equal to PHI (then it is necessary to re-synchronize them). I imagine that small instabilities in one of the oscillators immediately give origin to a phase shift in it, so that the phase relation is changed.

2) the modulating frequency, for the distances I am interested in, is about 1 MHz. What kind of circuitry can I use to have a AM modulation of a carrier (say some tenths or hundreds of MHz, for example) with a modulating signal of so high frequency?

If I have not been clear, please let me know...

Thank you very much.

Ciao
Giorgio

AMATEUR RADIO NEWSLINE(tm) REPORT #1262 - OCT. 19, 2001

Amateur Radio Newsline report number 1262 with a release date of Friday, October 19th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The International Amateur Radio Union speaks out on Morse and the ham radio community responds. This story is first on Amateur Radio Newsline report number 1262 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: IARU MEETS - MORSE ON ITS WAY OUT

The International Amateur Radio Union meets to discuss the future of our worldwide hobby service including the Morse code. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

The Administrative Council of the International Amateur Radio Union met between the 6th and 8th of October in Guatemala City. The principal business was to continue preparations for WRC-2003, which has several items of importance to the amateur services on its agenda.

Items discussed he harmonization of amateur and broadcasting allocations near 7 MHz; adequacy of HF broadcasting allocations below 10 MHz; possible revision of Article S25 of the international Radio Regulations; changes to terms and definitions in Article S1 as a result of amendments to Article S25; review of provisions concerning the formation of amateur callsigns in Article S19; additional allocations for 'Little LEO' satellites; study of a possible allocation to the earth exploration-satellite service for synthetic aperture radar near 435 MHz; and possible identification of globally harmonized frequency bands for use by agencies and organizations dealing with public protection and disaster relief. The IARU objectives with regard to these agenda items were affirmed.

The IARU Council adopted a resolution urging member societies to seek, as an interim measure, Morse code testing speeds not exceeding five words per minute. The IARU Council, setting aside previous decisions, resolved that IARU policy is to support the removal of Morse code testing as an ITU requirement for an amateur license to operate on frequencies below 30 MHz.

Jeramy Boot, G4NJH.

--

The next scheduled meeting of the IARU Council will be in September of 2002, immediately prior to the Region 1 Conference in San Marino. (RSGB)

**

CW: HAMS REACT TO IARU DECISION ON MORSE

The IARU policy decision to support the removal of Morse code testing as an international requirement for an amateur license to operate on frequencies below 30 MHz is again sparking a hot debate. This, between those who favor retaining mandatory Morse testing and others who want to see an end to CW as a requirement to operate the high frequency bands. There is really nothing new in the arguments on either side. Amateur Radio Newsline’s David Black, KB4KCH, has more:

--

Morse code. Most hams love it or hate it.

CW, as it's also known, was developed for land based telegraphy in the early 1800's by Samuel F.B. Morse. Morse code and ham radio have gone hand in hand ever since. But now, CW as a requirement for a ham license may be going away.

The International Amateur Radio Union Administrative Council has taken the first steps. Less than two weeks ago, the group voted to set aside any previous decisions and support removing Morse code testing as an ITU requirement for hams to operate on frequencies below 30 MHz. In effect, that move seems to suggest there's little chance that the IARU will support keeping Morse testing as a requirement for getting a ham radio license.

Long time CW operator Jerry Womble, WA4QIN, of Steele, Alabama, says losing code as a license requirement would not be good for the amateur radio service.

--

Jerry Womble, WA4QIN: “If you remove code from the process of getting' a ham license I think you dilute the talents in the community, and I think it means a little less to the person who actually gets the license that he did not go through a process that most of us have gone through to obtain our license”
--

But that view is not universal.

--
Jim Baker, N4RVH: “It wouldn't bother me if they did remove it”
--

Birmingham resident Jim Baker, N4RVH, says ham radio would continue just fine without Morse code as a license requirement.

--
Jim Baker, N4RVH: “Radio is gonna to continue and its gonna progress beyond that. With what the technology is getting into now it is going to far surpass what the code started out to do and that's to communicate.”
--

These people are the middle grounders. They welcome an open exchange of viewpoints but they also know that they must accept the judgment of the service's political leaders and the world body of telecommunications regulators.

One side or the other will lose, but both sides will eventually have to live with whatever the final ITU decision on Morse code testing turns out to be.

From Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

The bottom line. Regardless what’s decided at the next World Radiocommunications conference, not everyone in ham radio is going to be happy.

(ARNewsline™)

**

CHANCE FOR A RARE CONTACT: GHANA COMING TO 6 METERS

Its considered one of the rarest of the rare countries on VHF, but now Ghana is coming to 6 meters. This with word that a group of DXers will be operating from the city of Elmina from Friday, October 26th through 1700 UTC on Sunday, November 4th.

Arliss Thompson, W7XU, Richard Hanson, K5A-D and Ed Gray, W0SD are the expedition leaders. Thompson says that the group plans on using the call sign 9G5SIX. And while they will have the capability of operation on 160 through 10 meters they will concentrate mainly on operating the 50 MHz band both C-W and SSB.

As to gear, Thompson says that the station dedicated to 6 meter operation includes a pair of Yaesu FT-100D transceivers, a 3CX800 amplifier and a 7 element yagi on a 27 foot boom. A Icom IC-706 transceiver and loop antenna will be dedicated to monitoring 28.885 MHz on 10 meters. This is the internationally recognized frequency used by 50 MHz operators to plan 6 meter D-X contacts.

And to let everyone know if the signal from Ghana is on the air, Thompson says that they will establish a beacon on 50.106 MHz. If you hear it, there is a better than even chance you can tune up the band and make contact directly with the D-X pedition itself.

As to the High Frequency bands, Thompson says they will use a Yaesu FT-746 with Acom kilowatt amplifier feeding wire, vertical and loop antennas for 160 through 10 meters. That station will be primarily manned by W0SD. QSL information will be released at a later date.

We will have more D-X related information at the end of this weeks Amateur Radio Newsline report. (VHF Reflector)

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Reading Amateur Radio Club’s W3BN Repeater serving Reading Pennsylvania.

(5 sec pause here)

**

AMERICA FIGHTS BACK: A NEW EAS STRUCTURE

As reported last week, the Emergency Alert System or EAS was not activated before or during the terrorist attacks on the World Trade Center and the Pentagon. Instead, President Bush chose to use the commercial media as a way of informing the public. And shortly after the attacks the FCC suspended the need for regular tests of the EAS system for a short period of time, presumably so as not to cause panic in the general public that another attack was taking place.

Does this mean that the EAS need restructuring or modification? Richard Rudman, W6TIA, is the chairman of the Emergency Alert System National Advisory Committee. He says that its time to look at future technology and how it can be incorporated into the E-A-S system to better serve the American public.

--

Richard Rudman W6TIA: “Where I really hope we can take this is to look at something that my national advisory committee already is studying under the heading of Advanced Warning Systems. Amateur Radio operators are already familiar with them because we have been doing this for years. We have a lot of advanced warning systems.”

“We need to look at the capabilities of technology are, what people are going to have for personal communications devices in the future and come up with some intelligent ways to allow people to program their devices so that they can get alerts to the hazards they want to be notified about, in some cases 24 hours a day, 7 days a week wherever they are.”

--

From Rudman’s comments it appears as if the concepts developed by ham radio operators along with overall advancements in personal communications technology could play a role in the future of the Emergency Alert System. Translated into everyday language, it means saving lives. (ARNewsline™)

**

AMERICA FIGHTS BACK: BAYGEN RADIOS DROPPED ON AFGHANISTAN

Radio has become an important tool in the United States military campaign in Afghanistan. In addition to its on tactical communications, the United States air dropping wind up radios to the Afghan public. Amateur Radio Newsline’s Bruce Tennant, K6PZW has the details:

--

For more than two weeks the United States and its coalition allies have not only been dropping bombs and food ration packs into Afghanistan. They have also been air dropping a new secret weapon in their war on terrorism. The world famous Bay-Gen wind-up radio.

According to the British Broadcasting Company on-line service, Americans forces have reportedly also been air-dropping hundreds of the small Bay-Gen Freeplay wind-up radios into Afghanistan as the first step in what promises to be a battle for the hearts and minds of the Afghan people. The radios are thought to be specially designed fixed-frequency models that will automatically tune to information broadcasts issued by the United States military.

The BBC says that Washington is relying on the work of its renowned Commando Solo broadcasting unit to reach Afghans over the airwaves. The six EC-130 planes that make up the Air National Guard's Commando Solo fleet serve as flying radio stations. The unit has a record of operating in U-S conflicts such as those in Panama, Bosnia and Haiti. And in addition to the efforts by the U-S military to air-drop radios, relief agencies are also working to supply commercial wind-up models to refugees, many of whom have fled their homes because of severe food shortages in Afghanistan.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The BBC on-line article says that the wind-up radios will be used to publicize food drops and the message that "the people of Afghanistan are not the enemy." The article also quotes journalist Nick Grace, of the website Clandestineradio.com who believes the Commando Solo unit is also involved in jamming the Taleban-run station Voice of Shari'ah. (BBC)

**

HAM RADIO AND THE WAR: TERRORIST ATTACKS CAUSE 2 METER BEACON DELAY

The terrorist attacks in New York City and the Pentagon caused a new ham radio beacon to be delayed. This, according to Tim Marek, K7XC, who was getting ready to put one on 144.288 MHz from Northern Nevada when the attacks on the East coast occurred.

Marek is a Radar Tech on the Naval Electronic Warfare Range in Nevada and he says service to the nation came first. In a posting to the VHF Reflector, Marek says the Navy compressed a four week pilot training event into two weeks. As a result he wound up working 18 straight days of 12 hour or longer shifts helping to train US pilots for their missions.

This task completed, Marek, has finished assembling the new beacon and has K7XC slash B running 10 watts into a Ringo Ranger from his home in grid DMZ09. He hopes to find a mountaintop location and a horizontal antenna for it in the near future. A 432 MHz beacon at the same location is in the works as well. (VHF Reflector)

HAM RADIO AND THE WAR: HEALTH CONCERNS CAUSE CQ TO ASK CONTESTERS TO E-MAIL LOGS

This is Rich Moseson, W2VU, Editor of CQ magazine, with a message for anyone planning to participate in next weekend’s CQ World Wide DX Contest, or any other CQ-sponsored contest.

Because of security concerns, we are asking everyone who submits a log for our contests to do so by e-mail. The rules for each contest give you the appropriate e-mail address. Logs received through the mail at the CQ offices will be held unopened until all potential health risks have been evaluated. We cannot guarantee that these logs will ever be opened.

We know this will inconvenience a small number of participants in our contests and we regret the need to make this request. But our logs come from all over the world, and even from Trenton, New Jersey. And while the risk that amateurs might be involved in any sort of terrorist activity is very small, mail en route may be subject to tampering. We cannot ask our staff members or contest committee volunteers to possibly expose themselves to dangerous packages sent through the mail when there is an alternative.

We've already received several e-mail messages critical of this request, suggesting that we are giving in to terrorists. We don't see it that way. We are not canceling the contest. But we are taking reasonable precautions to protect our staff from what is, based on this week's news, a very real and fast-growing threat. (CQ Magazine, W2VU)

ENFORCEMENT: PART 15 VS HAM RADIO

Interference to a Washington state two meter repeater has been traced to a legal albeit faulty Part 15 device. The Portland, Oregon FCC office recently investigated interference to the Clark County Amateur Radio Club repeater in Vancouver operating on 147.84 MHz. The interference was traced to a Gemini model V C 2000 Part 15 video transmitter located about one mile away. The owner was contacted and voluntarily removed the device from service. Interference gone. Case closed. (Portland SBE Bulletin)

**

EMERGING TECHNOLOGY: SATELLITE RADIO VS. RF LIGHTING

A major battle has developed between the deliverers of satellite radio and a company that will soon manufacture R-F lighting. This, as XM Satellite Radio and Sirius Satellite Radio ask the FCC to reduce the level of allowed emissions from a particular new model of outdoor light bulb to reduce potential interference to satellite delivered radio signals.

The trade publication Radio World reports that Sirius and XM have specifically asked the FCC to require that Fusion Lighting lower the bulbs radio frequency emission levels y 99.9% of current levels. According to Radio World, Fusion's R-F lamps are designed to operate in an unlicensed portion of the microwave spectrum. Unfortunately, the lamps hold the possibility of interfere with S-band communications channels used by satellite services.

But Fusion says that granting the request would be undue overregulation and effectively put the company out of business. They say that the microwave powered lamps are still in development and at least a year from commercial sale.

Reportedly, the FCC has already spent several months trying to resolve the dispute. So far, no resolution. (Radio World)

**

EMERGING TECHNOLOGY: PAY TO LISTEN TO OLD ART BELL RADIO SHOWS

If you are a fan of Art Bell, W6OBB's, "Coast to Coast A-M" radio program and you miss tuning in one night, its going to cost you money to hear a repeat of the show on the world wide web. This, after Premiere Radio Networks announces that as of Monday October 15th there will be a fee to access old shows.

According to the Premiere announcement the longtime free audio streaming has disappeared and has been replaced with a new $6.95 a month subscription service called Art Bell's StreamLink. With StreamLink you can listen anytime you like to any Art Bell Show from the last 30 days.

Not everyone is happy with the decision to charge including Bell. According to a posting to his website, it was not his decision to change the free Internet access. Rather it was a decision made by Premiere based on cost.

Bell says that there are now millions of people on the Internet and bandwidth costs money. About $1.5 million per year for all the Premiere shows. He says that Premiere hopes to break even.

W6OBB says that he has been receiving many angry e-mails and that he understands the anger at having to pay for what was free. But he also understands the company cannot continue to cover the ever growing cost.

Bell adds there is at least one bright spot. Says W6OBB,   "it is still free on the Radio."

More information is on the web at www.artbell.com. (Art Bell Website)

SPECIAL EVENTS: JOTA 2001 AND THE ISS

If you are hearing this newscast between 0001 local time on Saturday, October 20th, and 2359 local time on Sunday, October 21st, then as soon as its over get on the air to contact the Boy Scouts Jamboree On The Air 2001. Several hundred thousand Scouts and Scout Leaders and others are expected to be on around the world for this annual event.

Listen for scouts on 3.740 and 3.940 on 75 meters, 7.270 on 40, 14.290 on 20, 21.360 on 15, 28.390 MHz on 10 plus the WARC bands.

And as a special added attraction, International Space Station Commander Frank Culbertson, KD5OPQ has said that he will try to make some general QSO's for the scouting Jamboree. He will operate on the usual ham radio space to ground frequencies. Because of Culbertson's limited time on the air, non-scouting stations are being asked to give preference to scouts trying for a contact with KD5OPQ on board the ISS. (Q-News, SAREX Remailer, K6DUE, KC6ROL)

OUR HERITAGE: RADIO PIONEER DONALD HINGS

Tom Farley, KD6NSP writing in the CGC Communicator notes that he is always trying to publicize radio pioneers that have not been written about. One of these is Donald Hings whom Farley describes as a Canadian wireless inventor who came up with an early form of the walkie talkie and played a big role in the Canadian and British war effort.

Unrecognized compared to people like the late Al Gross, Hings was recently presented with the Order of Canada by her Excellency, the Right Honorable Adrienne Clarkson, the Governor General of British Columbia.

His granddaughter has built a nice web site to honor his radio accomplishments. Its at http://sitka.triumf.ca/morgan/dlhings. (CGC Communicator)

**

OUR HERITAGE: THE SOUTHERN APPALACHIAN RADIO MUSEUM

According to an Internet posting by John Travis, W4QCF, if you like old radios, there is a new museum just for you. Called the Southern Appalachian Radio Museum, its located in Ashville North Carolina and is described as a dream come true for many years for members of the Quarter Century Wireless Association Smoky Mountain Chapter 145. The sponsoring group also recently received the club call W4AFM, which once belonged to Bill Hayes who was licensed in 1926. You can get a glimpse at what’s there by visiting the museum website at www.saradiomuseum.org. The real world museum is open every Wednesday evening and John Travis says that you are invited to come and see it. (W4QCF)

**

NAMES IN THE NEWS: W6VQP NAMED FELLOW IN THE RADIO CLUB OF AMERICA

The Radio Club of America has announced its list of names to be inducted as Fellows in the organization. Among them is one well known to anyone who remembers the very early days of our news reporting operation.

One of the 20 inductees for the year 2001 is Radio Design Group president James R. Hendershot. Ham radio opprerators better know him as Jim Hendershot WA6VQP, the founder of the Westlink Radio Network. Westlink Radio was the original name of the Amateur Radio Newsline when we first went on the air way back in

1977. (ARNewsline™)

**

INTERNATIONAL - IRELAND: NEW TELEPHONE TECHNOLOGY COULD CAUSE RFI

New high speed telephone technology in Ireland has been announced by their regulatory agency Eircom. The new system will provide Internet access using ADSL brand named 'I stream' using existing phone lines with subcarriers in the range 100 kHz to 1.1 MHz. This will allow faster speed downloading from the Internet and allow for existing voice calls to be carried on the same phone lines in the range 0 to 4 kHz.

But there is a downside. A large number of reports from United Kingdom trials show that radio receivers placed near the phone lines will have strong interference in the Long Wave and Medium Wave bands. There also may be interference in the High Frequency bands. And the system may be susceptible to interference from High Frequency transmitters as well. More details are available at www.eircom.ie. (IRTS, Q-News)

**

DX

In DX, C98RF in Mozambique has been really active on 30, 12 and 10 meters. Watch 12 meters from 1100-1730 UTC, 30 meters after 2100 UTC and 10 meters very early after 0900 UTC. QSL via DL6DQW. (OPDX)

And ET3VSC in Etheopia has been pleasing many CW operators over the past week with activity on 12 and 10 meters. Look for him between 1830 to 2130 UTC on either band. QSL via K3IRV. (OPDX)

**

THAT FINAL ITEM: WHO REALLY WAS SAMUEL FB MORSE

And finally, we started this weeks newscast with reference to the Morse Code. There is no need to tell anyone that the Morse code is synonymous with ham radio. For almost a hundred years the “code” has been such an integral part of the Amateur Radio service that for some in the hobby its a way of life. To others it was a dreaded obstacle to upgrading to a higher license class until restructuring capped the test speed at 5 words per minute. Yet without the code there might never have been ham radio because its use preceded voice transmission by many years. Even so, there are probably very few in the hobby who know much about the man behind the dots and dashes. But as Amateur Radio Newsline’s Henry Feinberg K2SSQ tells us, the code is only a small part of the story of the man:

--

Samuel Finley Breese Morse was not a ham radio operator. In fact, radio was more than a century away when he was born on April 27, 1791, in Charlestown, Massachusetts.

His childhood is described as almost mundane. He was the son of Jedidiah Morse, a church pastor who was as well known for his abilities in geography. A close family friend was Noah Webster who was equally known for his dictionaries.

Morse attended college at Yale where he is described as having been an indifferent student. But his interest was aroused by lectures of the then newly-developing subject of electricity. After college, to the his parents dismay, Morse directed his enthusiasm to painting which he studied in England. After settling in New York City in 1825, he became one of the most respected painters of his time.

In 1832, while returning by ship from another period of art study in Europe, Morse heard a conversation about the newly discovered electromagnet and conceived of the idea of an electric telegraph. By 1835 he probably had his first working model in the New York University building where he taught art. Being poor, Morse used such crude materials as an old artist's canvas stretcher to hold it, a home-made battery and an old clock-work to move the paper on which dots and dashes were to be recorded.

In 1837 Morse acquired two partners to help him develop his telegraph. One was Leonard Gale, a quiet professor of science at New York University and Alfred Vail, a young man who made available both his mechanical skills and his family's New Jersey iron works to help construct better telegraph models. With the aid of his new partners, Morse applied for a patent for his new telegraph in 1837, which he described as including a dot and dash code to represent numbers, a dictionary to turn the numbers into words and a set of sawtooth type for sending signals.

By 1838, at an exhibition of his telegraph in New York, Morse transmitted ten words per minute. He had dispensed with his number-word dictionary, using instead the dot-dash code directly for letters. Though changes in detail were to be made later, the Morse code that was to become standard throughout the world had essentially come into being.

During the next few years Morse exhibited his telegraph before savants, businessmen and committees of Congress, hoping to find the funds to give his telegraph a large-scale test. He met considerable skepticism that any message could really be sent from city to city over wire. On his own, in 1843, without significant help from his discouraged partners, Morse finally secured funds from Congress to construct the first telegraph line in the U. S. from Baltimore to Washington D.C. Morse directed the wires to be mounted on poles and by May 1844, the first inter-city electromagnetic telegraph line in the world was ready. Then, from the Capitol building in Washington, Morse sent a Biblical quotation as the first formal message on the line to Baltimore These were four words that changed the world of telecommunications forever. The four simple words: "What Hath God Wrought!" And trhe rest -- as they say -- is history.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

By the way, some of the information in this story came from the Locust Grove Samuel Morse historical site at www.morsehistoricsite.org. If you want to learn more about the man and his contributions to society, we say its well worth a visit. Its one of the best. (Various Morse related websites)

Hi fellow Amateur Radio Ops
The Clear Lake ARC will hold HamFest 2001 on October 20th.
We have great door prizes (ICOM 706 MKII G, T81 quad band HT, and an Alinco power supply)
Entry is $3/person (kids 12 or younger free if accompanied with an adult)
Buy lots of tickets ($1=1 ticket, $5=6 tickets, $10=12 tickets, $20=25 tickets)
We have lots of vendors and ham sellers. In fact all tables are currently sold out.

www.clarc.org/hamfest.htm has maps, directions, prizes, and more

This Hamfest is all inside the Bay Area Community Center (NO OUTSIDE TAILGATING ALLOWED!)

See you THIS SATURDAY OCTOBER 20th, 2001

73 de KA5GLX

I was wondering if anyone knew anything about building a passive resonator. What I am trying to acive is to be able to build an antenna that when struck with a carrier signal, it will reflect back the signal with the sound modulations in it. I would appreicate any hints/tips with regard to the antenna or the frequencies that it can be used with.

Regards,
Bill B.

Hello Folks,
I have the following for sale

Sams Photofact "Audio amplifiers an associated equipment"

Volumes 3, 4, 5. These are from the mid 50's and feature diagram's parts list, dial restringing instructions, tube pin outs and all the sort of stuff one would need to repair audio equipment of the period. Scott, Mac, Hallicrafters, Knight, Masco, Bogen, Stromberg etc.

The bindings are strong and there are no loose pages. I scanned through it and all was clear and readable.
The only thing is the front covers are missing and edges of the pages are yellowed.

Good solid American radios!!!

Best offer plus shipping

Paulc@snet.net

Thank you
Paulc

Howdy,

Just wondering if anyone with a Kenwood TH-F6A could comment on the memory scan speed of the radio. Kenwood is notorious for having a slow memory scan speed, just wondering if this HT is any different.

Tnx & 73,

Mike Davis

You may want to contact one of the Hams that stalks this newsgroup. His XYL is a Novice and allegedly stars in a movie produced and directed by a guy who calls himself Wrong Way.
I have yet to see the movie but I am told that she grunts out CQ in three different octaves at speeds ranging from five wpm at the start of the movie and builds her speed to 33 wpm at the climax.
I don't know the name of the movie but some of the guys here may be able to shed some more light on it. I think the movie may have been made in Georgia a few years ago and I saw a post that said the movie was being shown in the Atlanta area.
Good luck with your search.

Probably a bit too British for most Merrycans, but there is always Tony
Hancock in 'The Radio Ham'. Not really a movie... one of a BBC TV half-
hour comedy series from the 60s. Considered 'a classic' over here, along
with 'The Blood Doner'. Of course, in reality there are no radio
amateurs as ludicrous and incompetent as the character portrayed by
Hancock....  well, maybe a just few...
73,
Ian.

Although I have only programmed my TH-F6a for about 24 channels - and scan about 10 of those - I am not disappointed with the scan speed.

I'll try to clock it later....

Software/rsmain.htm?L+test+pbcz7345+1003728583

As an alternative, you can probably have your local Motorola delaer
program the unit for you for a reasonable fee.

I would say it will be an "unreasonable fee" judging by the Motorola dealers
I have competed with over the years.  Typically $75 per radio, even in large
numbers.  My shop made good money programming Motorola radios because they
charged so much.

Tim

I can give you some feedback here as I just put out a similar post on r.r.a.boatanchors a few weeks ago.

The movie "Hatari" with John Wayne has lots of radio action. They work both a base station boatanchor and go mobile on VHF (??) several times. No one uses a call sign and it must have been quite an experience for any ham back then to be DX'ing and suddenly stumble upon hard-drinking, cursing Trappers ragchewing illegally (?) on the radio. It's shown several times a year on cable, check it out.

. A truck and a 4X4 going full tilt across the African Savanna in pursuit of a charging Rhino that repeatedly rams the truck with his big ugly tusk while the two teams stay in touch and "work" the rhino via VHF (? based on apparent antenna length). Fun movie, but not for women's libbers. Hard to say if it's a cool take on radio given the multi-mode "action-style" usage or poor continuity due to lack of legal Ham procedure. You decide. One of those movies made back when men were men and women were proud of 'em.

And here's another,.....

"The Thing" , James Arness vers. Actuall, I think it's more
properly called "The Thing From Another World !".

No ham per se, but I recall milcomms, arctic base stations
(portable?) , and maybe aero-mobile as well. I recall a few
scenes of Radio Op. twiddling dials over static, etc. while
captain urges him to "keep trying!!". Or somesuch . Maybe
not much for Ham ,though a real fun flick Those of you who
feel good grounding is irrelevant suggest you watch the
shocking climax. Others know what I mean.<grin>

You may want to contact one of the Hams that stalks this newsgroup. His XYL
is a Novice and allegedly stars in a movie produced and directed by a guy
who calls himself Wrong Way.
I have yet to see the movie but I am told that she grunts out CQ in three
different octaves at speeds ranging from five wpm at the start of the movie
and builds her speed to 33 wpm at the climax.
I don't know the name of the movie but some of the guys here may be able to
shed some more light on it. I think the movie may have been made in Georgia
a few years ago and I saw a post that said the movie was being shown in the
Atlanta area.
Good luck with your search.

Not quite hamming but I think in one of the "Gilligan's Island" episodes
use is made of a Hallicrafters receiver. Maybe also, in, god forbid,
"Fantasy Island". Thankfully, I never saw the latter and don't remember
the former. "Plan Nine from Outer Space" has some cardboard boxes that
look like radios.

Hello--
IIRC, there's a brief sequence in "ET" in which the protagonist homebrews
a transmitter
from an old phonograph, a Speak-and-Spell, and an umbrella frame....

Thank you Clint for the response, I'll be curious to find out your results.

The features on this radio sure sound great. Unfortunately, the local ham store sells them so quick, they never have any on hand for me to see! Overall, how do you like the radio? How's the audio?

Tnx & 73,

Mike Davis

Each to his own I suppose. I saw it in the theatres when it was 1st released and was thrilled by it as a little boy. Also, think the theme song about the cute baby elephants is a classic and maybe won an Oscar. None of this makes it a good movie, but like I said, each to his own. Besides, even today I still lust for that pouty French girl and wonder why. Ce'st la Vie. The only REALLY good JW movie was "True Grit", IMHO.

Hello,

I'll admit I'm a bit of a dinosaur- I have never owned a digitally tuned rig. I have always used PTO style rigs because of the smooth tuning. When I recently read that a Ten Tec Jupiter takes 25 turns of it's main tuning knob to tune just 3 Khz at a 1 Hz step, I couldn't believe it!!! The idea of tuning a rig and hearing a "musical scale" of sorts as you tune thru a signal is not very appealing to me at all. Are there ANY modern rigs that offer smooth tuning at a faster rate?? Is a 10 Hz tuning step rate very noticeable?? (It probably is...) I spend a lot of time just tuning around the Amateur and SW bands, so this is important for me. Thanks for any advice!

73, -Jack WA6KYO (Currently a Ten Tec Corsair II and Kenwood R-1000 owner, not considering going digital at the moment!!)

The Red Tent (1969), a foreign language film (available with english subtitles) includs a ham radio sequence involving the flying of the antenna from a kite. This one will appeal to the code proficient.

The audio output is rated at 1/3 of a Watt. It is quite loud and clear for such a small unit.

Overall? It's an amaxing little HT. I am using it daily...probably in its "simplest" of modes. I have programmed about twenty or so systems into it, and merely placed the display in single-band mode (one-line in the display), and scan my favorites across all three amateur bands.

I also used it over the weekend to listen to a baseball playoff game. (grin)

Sorry you have had that experience ... I would never charge a fellow
amateur radio operator that much to program an HT.

I have an Icom 756 pro, and I tried it with tuning steps set to 100hz on
am and ssb. On am, the tuning steps weren't audible. On ssb, listening to
an am station, the steps were audible because of the beat note.
There is a 'TS' tuning step button adjacent to the tuning knob that acts
as a gear shift- a push of the button puts you in quick tune mode, and a
single spin of the weighted knob will change the tuning a couple of mhz.
Then another push puts you back into slow tuning, which can be set to
either 1 hz or 10 hz steps.
The quick-tune step can be set separately for each mode of operation (am,
fm, ssb, cw, rtty). I find it handy to just use a 5 khz step for am when
listening to short wave broadcasts, because they're all on frequency, and
it make it much easier to tune. By tuning 5 khz high or low, most
interference can be eliminated.
This is in addition to setting frequency by direct entry, or by either
scratch-pad or long-term memories. And it goes back to the frequencies you
were using for each ham band, when you switch by bands.

Hi everyone!
I made a new club called transistor radios. The club is for various subjects, including, collecting, experimenting, and building.
Have fun!

Is anyone using a palmtop for logging? If so, what kind of palmtop are you using and which program? Any info would be greatly appreciated! Please email me direct at: N9RK@aol.com
Thanks!

I do not "go looking for incorrect subject lines, BUT

" If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was"

Get familiar with it and Live with it...

Just my Opinion.

Bob

Almost as bad as SPAMMERS who sit around making up subject lines
which do not mention ebay or auction, for the JUNK they are obveiously

peddeling on ebay.

If it is on ebay say so. OR you get a cookie cutter Message..

You might want to check out some of the boats in the marina. Its not unheard of
for boats, especially sport fishing boats, to have cb radio's onboard. Alot of

boaters use them so they can chat with other fishermen without the hassles and
restrictions of using marine radio.
It could be coming from alot closer than you think - especially if it is
knocking you out that hard.
Just a suggestion.

hi there ! i'm a new ham (9/6/01) and would like to hear from some one
experienced with random wire antennas. dont have a rig yet but i'm
looking at IC706mkllG or yeasu ft-100d (maybe used,pretty pricey)i've
been using a 70' end fed for recieving, and it works well, any idea how
it would be for transmitting ? antenna is 70' copper#14awg wire
25'above ground coming from end of eaves on building to tree out in
back, also lead in is about 35' along side of outside wall
down to window (thru a lightning arrestor)this antenna will be used for
160-10M
love this stuff,been listening scince i was a kid, only just now able
to get to talking with the people i've been listening to for so long.
thanks for any help

I am looking for an old GLASS, broadcast tube. Eimac number 750 TH It is
about twice the size of a 4-1000A. I do not care about emmission. All I
want is the filiaments to work for a lited tube display. Socket also if
available.

Or any other GLASS tubes of that caliber or larger for the display.

k9vdd@home.com

I've been looking for a US supplier of these and none of the parts
places I usually deal with has this, and I've not been successful in
finding anything on the web. It' an FM stereo transmitter on a chip,
if anyone's interested.

Short of going through Rohm directly to find someplace where I can pick
a single one up, anyone have any sources handy?

Jim

Another suggestion would be to look into the DSP unit for the 706. I live in
the heart of High Power Alley (CB channel 4 27.005) where nobody can key a CB
up with less the 1000 watts and have a hope of being heard. My rig's DPS will
filter out all but a slight buzz heard on occasion when one of the guys with
the 3k mobiles drives past the house, and then only for just a second.
   There are several external DSP units that work pretty well and Clear Speech
has a filtered Speaker that works great too. I put one of the Radio Shack DSP
40 units to the test when (I'm not ashamed to admit) as a CB'er I had one of

these folks around the coner from me and it worked pretty good for the 25.00 I
had ivested in it on a CB TXR, so I would imagine it would work even better on
a rig that had some filtering. Good Luck and all the best

I have a mint JRC JST-145 HF radio with original box, manual and optional service manual. It comes complete with the hand-mic, optional desk-mic and the optional 2.7kHz SSB filter with bandwidth control. This radio was just aligned and checked out. I also have a home-brewed PSK31 interface I will throw in as well. I have the QST review if anyone is interested. I am looking to buy a new FT-1000MP MkV or trade for ??. I am also looking for a plain FT-1000MP for possible trade.

Darren

Subject: ARLX009 FCC, federal agencies shut down after terrorist attacks

SB SPCL @ ARL $ARLX009
ARLX009 FCC, federal agencies shut down after terrorist attacks

ZCZC AX09
QST de W1AW
Special Bulletin 9 ARLX009
From ARRL Headquarters
Newington CT September 11, 2001
To all radio amateurs

SB SPCL ARL ARLX009
ARLX009 FCC, federal agencies shut down after terrorist attacks

Along with most other federal agencies, the FCC has closed its offices and sent its employees home in the wake of apparent terrorist attacks this morning in New York City, Washington, DC, and elsewhere. The FCC has issued no emergency declaration nor other special instructions to the Amateur Radio community. The ARRL has advised amateurs to stay alert to instructions from local authorities. President George W. Bush has announced that the US military is on high alert in the US and abroad.

US air traffic was shut down after two airliners struck the twin towers of the 110-story World Trade Center in New York City this morning within a short time of each other. The building's towers partially collapsed in the wake of the collisions. An aircraft subsequently crashed into the Pentagon, and another aircraft crashed near Pittsburgh, reportedly after being hijacked. American Airlines and United Airlines both have acknowledged that they have lost planes this morning. More than 260 died in the crashes. Thousands were believed injured in New York City; there's no estimate on the number killed.

New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D, said there has been no request for any Amateur Radio Emergency Service response at this time, although hams have been requested to assist the American Red Cross. New York City's emergency management offices are located in the World Trade Center. He said he was alerting all amateurs, especially ARES and Radio Amateur Civil Emergency Service personnel, to get prepared and to stand by. Carrubba said he's in the process of setting up a command channel on a linked repeater system that will cover the area from New York City into Long Island's Suffolk County. Kenneth Goetz, N2SQW, reports New York State RACES is operational on 3.993.5 and 7.248 MHz handling emergency and governmental-type traffic. He asked amateurs to avoid these frequencies.

In the Washington, DC, area, Virginia SEC Tom Gregory, N4NW, says Virginia ARES has been put on alert but has not yet been activated. ''I've asked everyone to monitor the emergency frequencies and to keep a full tank of gas.'' He said the attack on Washington has resulted in a massive traffic jam as workers in DC attempt to leave the capital; cellular telephone communication was next-to-impossible. While no emergency nets are in operation yet, Gregory said all repeaters would be available as well as 7.243 MHz and 3.947 MHz on HF.

Virginia RACES reportedly has been activated at the state emergency operations center at Virginia State Police headquarters in Richmond as a precautionary measure.

The FCC's Riley Hollingsworth today suggested that the amateur community remain calm but ready. He invited amateurs monitoring any suspicious radio activity to contact him, and he will relay relevant information to the FCC duty team. He advised monitors to tape such radio traffic, if possible.

Should a state of war be declared, Amateur Radio would not automatically be shut down. This requirement was eliminated prior to the Gulf War.

>Amplifiers on CB! I never heard of such a thing. Or, rather,
>I guess thats what I heard! These guys should be run out of
>town.
>

I've got some bad news, Richard. Amplifiers are very common. If you want to read something that will make your blood boil, go to rec.radio.cb and pick up the threads talking about amplifiers, and about operating in the 10 meter ham bands to find a "quiet" channel.

Some trucking companies have adoped 28.085 as a "company channel". A few hams around the country are leaving their rigs parked on that frequency when not engaged elsewhere in the band. Sometimes they get lucky and hear a signal which is close by. See FCC Enforcement Logs on R.A.I.N or ARRL sites for one trucker (Derek's Trucking in Creedmore NC) who just got busted.

Anyone who wants to help is welcome! If we don't patrol our own borders, we will loose the territory.

Subject: More on 10 Meter CB Signals
Message-ID: <20010912093707.06781.00000020@mb-bj.aol.com>
Xref: archiver1.google.com rec.radio.amateur:2228

Some CB operators have moved into the frequencies which lie between the regular 40 channels and the 10 meter ham band. They refer to this as "freebanding". Often, you hear the effect of this as "splatter" into the lower portion of 10 Meters. Occasionally, you will hear one of these fellows attempt to "break in" on your QSO.

In recent months, there has been a steady stream of letters pouring into the FCC offices from 10 Meter operators who want to be able to enjoy the band without interference from illegal stations.

If you are concerned about this, please become involved. Monitor and document illegal signals. If you locate the source, gather as much data as you can and forward it to Riley. Write to radio publications urging fellow amateurs to become supportive.

You either are a PLAYER or a VICTIM. In other words, you are helping direct matters, or you simply sit back and take whatever the players force upon you.

Don't roll over and play dead concerning 10 Meters! If you don't think the radio "terrorists" have their sights on taking over our band, stop by a CB radio shop and look at the frequency chart on the wall. The export radio manufacturers have designated "channels" every 10 KHz from 26MHZ all the way through the 10 Meter SSB band. And unlicensed people are buying these radios every day. If this doesn't get your attention, you should check your pulse!

Where can I find out who to contact (FCC?) about seting up a repeater
on a mountain top? I have the repeater, duplexer, antenna, hardwire,
permission from site owner, etc. I need to find out the specific
protocols for using the system or if I can. I also have the repeater
programmed for a frequency. System was taken off one mountain and
donated to me to use in generally the same area.

I've been using a random length wire for a while now. 70 ft #14 guage copper wire, hmm, Radio shack? Good choice. It's what I started with but spliced another piece on the end. I don't think 70 ft's gonna do it for all the way down to 160m, though. There was a thread a while back where we talked about random length/longwire antennas. I've got some additional considerations here and will eventually go with a yagi or two. So, I won't really talk about specific, personal examples. I will say that the longer the better and ask that somebody in the NG address how to terminate this antenna to offer omnidirectional characteristics.

what i dont understand is what is so difficult for the person with the auction listing to put for auction in the subject rather than for sale i know i dont like auctions if i am looking to buy an item i am not interested in fighting over the final price with a bunch of other people so i look for items that ate For Sale and it is misleading to see something listed as ForSale and when you open it up its just a link to ebay if i wanted to go to ebay i wouldnt have been looking in here for it
the only reason these guys list it as a ForSale rather than a FA is cause they know most people block any subjects with FA in it so they are intentionally misleading people and clogging up the news groups to boot
